CHAPTER 2

Test Builds

This repository is used internally to create different scenarios on build configs and trigger many builds on Read the Docs productions.

Each branch should explain on it's `docs/index.rst` what's about and how the QA process can be considered a success or a failure.

If we need to test a very specific use case, we create a new branch with the issue number and the repository, like: `issue-1234-org`, `issue-4321-ext` or similar.

2.1 Scenarios

Each of these scenarios is a branch that can be built independently from the others.

- `alabaster-theme`: use `alabaster` as theme
- `auto-wipe`: used for auto wipe the environment when a config is changed
- `branch/with/slashes`: used to check that git clones without problem
- `conda-env`: use a simple conda environment to build the docs
- `conda-env-py3.7`: use a simple conda environment to build the docs with Python 3.7
- `datetime`: shows different times (system time, build time, etc)
- `environment-variables`: shows all the environment variables used to build the docs
- `huge-build-output`: generate megabytes of output data for commands
- `none-formats`: use `formats: []` so only HTML is built
- `requirements-not-found`: use `requirements_file: .notfound.txt`
- `robots-txt`: use a custom `robots.txt` for this project
- `search-with-old-sphinx-and-theme`: search box on old Sphinx and RTD theme version
- `timeout`: generate a timeout by sleeping 1000 seconds

- `typlog-theme`: use `typlog` as theme
- `úñíč°ðø-branch`: the name of the branch is unicode
- `unicode-filename`: has a page (`rst`) that its filename is unicode
- `use-py2`: use `python: version: 2`
- `yaml-v2`: use a simple YAML for the V2 configuration

Note: There could be more scenarios probably, but this list is not always up to date. Please, check [all the branches](#) to be sure.

2.2 Tags

We also have some tags to have some tests around this.

- `tag-v1`: points to an specific commit
- `tag-v2`: points to the same commit than `tag-v1` ([Delete tags with same commit](#))

2.3 Addind a new scenario to the repository

1. Create a new branch from `master` using an appropiate name
 2. Explain what's the use case in its `docs/index.rst` file
 - How to check if the QA can be considered success or failure
 - Add links to the issue tracker where there are more information
 3. Add or modify the necessary files
 - Make sure that these files contains the minimum configuration needed:
 - remove auto generated comments
 - configs not used
 4. Push your changes
 5. Modify the `README.rst` file from `master` to add this new branch in the list
-

Sphinx configuration file used to build this docs (*see full file*),

```
1 # -*- coding: utf-8 -*-
2
3 # Default settings
4 project = 'Test Builds'
5 extensions = [
6     'sphinx_autorun',
7 ]
8
9 latex_engine = 'xelatex' # allow us to build Unicode chars
10
```

(continues on next page)

(continued from previous page)

```
11  
12 # Include all your settings here  
13 html_theme = 'sphinx_rtd_theme'  
14  
15  
16  
17
```

```
>>> # Build at  
>>> import datetime  
>>> datetime.datetime.utcnow() # UTC  
datetime.datetime(2019, 11, 19, 17, 43, 29, 317402)
```
