May 04, 2017

Contents

1	Introduction	1
2	Installation	3
3	Links	5
4	Indices and tables	7

CHAPTER 1

Introduction

armine is a Association rule mining package for python3. It provides *ARM* class to generate association rules from a set of transactions. It also provides a *ARMClassifier* class which uses CBA2 algorithm to classify given data.

CHAPTER 2

Installation

```
pip install armine
```
