# articlerequest Documentation

**Release latest**

May 23, 2016

# Contents

The article request system was written for the English Wikipedia, to allow users to request articles to be written on the English Wikipedia. The original version lives at http://tools.wmflabs.org/articlerequest

# Installation

## 1.1 System Requirements

The following components are required to install the article request system.

- PHP 5.6+ (*Not yet tested on 7.0+*)
- MySQL Database server

## 1.2 Installation Steps

The following steps allow for installation of the article request system:

1. Download latest release from Github
2. Unzip the file and move to a web server.
3. Apply `sql/articlerequest.sql` to the database of course choice.

Then, continue to the next page to configure your instance.

# Configuration

The article request system is designed to be installed.
