cakephp-theme

Release 0.0.17

CakePHP

Jan 02, 2017

Contents

A Sphinx theme for use with CakePHP projects.

CHAPTER 1

Features

- Easy ability to install/use as a Python package (tip o' the hat to Dave & Eric's sphinx_rtd_theme for showing the way);

- CakePHP-based documentation theme

Project background

The CakePHP documentation theme is a theme made for use with CakePHP projects. This allows developers to distribute their own documentation in a format that adheres to the CakePHP documentation styleguide.

When Should I use this Theme?

This theme should be used when:

- You are developing a CakePHP-related plugin or project
- You are attempting to promote CakePHP

You should *not* use this project for:

- Projects not related to CakePHP, e.g. projects for other frameworks or for strictly-php libraries
- You are misrepresenting the CakePHP, e.g. stating that your project is an official project when it is not.

Please note that the above list is **not** exhaustive, and is subject to change.
