CERNServiceXML is a small library to generate a CERN XSLS Service XML.

---

## Installation

---

The CERNServiceXML package is on PyPI so all you need is:

```
$ pip install cernservicexml
```

---

## Usage

---

Creation of XSLS service documents.

Usage:

```
>>> from cernservicexml import ServiceDocument, Status
>>> doc = ServiceDocument('zenodo', status=Status.available)
>>> doc.add_numericvalue('users', 1000, desc="Number of users")
>>> xml = doc.to_xml()
```

Publishing of service documents.

Usage:

```
>>> from cernservicexml import ServiceDocument, XSLSPublisher
>>> doc = ServiceDocument('myserviceid')
>>> XSLSPublisher.send(doc)
<Response [200]>
```

---

```
class cernservicexml.document.ServiceDocument (service_id, status=None, timestamp=None,
                                              availabilitydesc=None, contact=None, web-
                                              page=None, availabilityinfo=None, avail-
                                              ability=None)
```

XSL Service Document class.

#### Parameters

- **service\_id** – A unique service id.
- **availability** – An integer 0-100 indicating availability of service (*deprecated*, use `status` instead). Default: 100.
- **status** – Status of the service. Allowed values: `available`, `degraded` or `unavailable`. Default: `available`.
- **timestamp** – Timestamp when the availability was calculated. Must be a datetime object. Default: `now`.
- **availabilitydesc** – Information about the availability.
- **contact** – Service contacts a string.
- **webpage** – Service website (any URI)
- **availabilityinfo** – Information about the service. Can contain HTML.

Changed in version 0.2: Added `status` parameter. *Deprecated* `availability` parameter.

**STATUSES** = [`u'available'`, `u'degraded'`, `u'unavailable'`]

Allowed status values.

**add\_numericvalue** (*name, value, desc=None*)

Add a numeric value metric.

#### Parameters

- **name** – Numeric value id.
- **value** – An integer, float or Decimal object.
- **desc** – A description.

#### **availability**

Get status as legacy availability percentage.

*Deprecated* since version 0.2: Use of `availability` as percentage is *deprecated*. Please use `status` instead. Attribute will be removed in v0.3.

**to\_xml()**

Serialize service document to XML.

**class** `cernservicexml.publisher.XSLSPublisher`

Publish a service document to an XSLS service.

**classmethod** `send` (*document*, *api\_url=u'http://xsls.cern.ch'*)

Send service document to XSLS.

---

# Changes

---

### Version 0.2.1 (released 2015-07-24)

- Relaxes Requests library version requirement from v2.3 to v1.1 to support CERN SLC6/CentOS 7 distributions. Note, Python 3.4 requires Requests v2+.
- Adds Travis test matrix to test multiple versions of the Requests library.
- Standardises software name (CERNServiceXML) and package name (cernservicexml) following usual inverniosoftware practices.
- Fixes reST headline formatting in *RELEASE-NOTES.rst*.

### Version 0.2.0 (released 2015-07-16)

- Adds support for service status parameter in `ServiceDocument`.
- Deprecates use of service availability percentage in `ServiceDocument`. Please use service status parameter instead.
- Changes documentation theme to the standard non-Flask RTD one.
- Initial release of Docker configuration suitable for local developments. *docker-compose build* rebuilds the image, *docker-compose run -rm web python setup.py test* runs the test suite.

### Version 0.1.2 (released 2015-06-17)

- Adds support for long (Python 2) integers.

### Version 0.1.1 (released 2015-06-17)

- Fixes issues with POST request for sending the service XML to XSLS.
- Adds doctests to ensure documentation examples works.
- Adds XML validation tests according to XSD Schema.

### Version 0.1.0 (released 2015-06-16)

- Initial public release.

---

## Contributing

---

Bug reports, feature requests, and other contributions are welcome. If you find a demonstrable problem that is caused by the code of this library, please:

1. Search for [already reported problems](#).
2. Check if the issue has been fixed or is still reproducible on the latest *master* branch.
3. Create an issue with **a test case**.

If you create a feature branch, you can run the tests to ensure everything is operating correctly:

```
$ ./run-tests.sh
```

You can also test your feature branch using Docker:

```
$ docker-compose build
$ docker-compose run --rm web /code/run-tests.sh
```

---
