
Coredata API client Documentation

Release 0.1.5

Kristjan Oddsson

June 15, 2015

1	Indices and tables	3
	Python Module Index	5

Contents: Import packages here for visibility.

class `coredata.CoredataClient` (*host, auth*)

A thin wrapper for requests to talk to the CoreData API.

create (*entity, payload, sync=True*)

Create a new entity with the payload and return id of it.

delete (*entity, id, sync=True*)

Delete a document.

edit (*entity, id, payload, sync=True*)

Edit a document.

get (*entity, id=None, sub_entity=None, offset=0, limit=20, search_terms=None, sync=True*)

Get all entities that fulfill the given filtering if provided.

Todo Rename `search_terms`

Indices and tables

- `genindex`
- `modindex`
- `search`
