# **cvml Documentation**

***Release 0.0.1***

**Will Price**

**Jan 17, 2019**

---

## Contents:

---

<b>1</b>	<b>cvml.plot</b>	<b>3</b>
<b>2</b>	<b>cvml.video</b>	<b>5</b>
<b>3</b>	<b>Indices and tables</b>	<b>7</b>
	<b>Python Module Index</b>	<b>9</b>

A library of common tools needed for machine learning with a focus on action recognition.

# CHAPTER 1

---

## cvml.plot

---

```
cvml.plot.plot_confusion_matrix(cnf_matrix, classes, normalize=True, title='Confusion matrix', ylabel='True class', xlabel='Predicted class', cmap='Blues', colorbar=True, colorbar_aspect_ratio=None, classes_per_inch=5, **kwargs)
```

Plot a confusion matrix. Normalization can be applied by setting *normalize=True*.

*kwargs* are parsed on to the *plt.imshow* function.

## CHAPTER 2

---

### cvml.video

---

```
cvml.video.o.stitch_frames(frame_dir:    pathlib.Path,   output_file:    pathlib.Path,   start_idx:  
                           int,   stop_idx:     int,   step=1,   fps=59.94,   overwrite=False,  
                           frame_pattern=re.compile('.*jpg', re.IGNORECASE))
```

Stitch a directory containing sequentially numbered frames into a video using FFmpeg

#### Parameters

- **frame\_dir** – directory whose children are all frames
- **output\_file** – path to video file composed from stitching all the frames in `frame_dir`
- **start\_idx** – index of the first frame to stitch after listing and sorting all frames with `list.sort()`
- **stop\_idx** – index of the last frame to stitch after listing and sorting all frames with `list.sort()`, use -1 to calculate the last frame based on the `start_idx` and `step`
- **step** – step size between adjacent frames (use 1 for stitching all frames, 2 for skipping every other frame, -1 for reversing the video)
- **fps** – frames per second for the resulting video
- **overwrite** – overwrite the `output_file` if it already exists?
- **frame\_pattern** – python regex pattern for selecting a subset of files, defaults to selecting everything

#### Returns

None

# CHAPTER 3

---

## Indices and tables

---

- genindex
- modindex
- search

---

## Python Module Index

---

### C

`cvm1.plot`, 3  
`cvm1.video`, 5

**C**

`cvm1.plot (module)`, 3  
`cvm1.video (module)`, 5

**P**

`plot_confusion_matrix () (in module cvml.plot)`,  
3

**S**

`stitch_frames () (in module cvml.video)`, 5
