Django Remove WWW is a [Django middleware](#) application that removes the WWW subdomain.

The middleware inspects the request's host for the www subdomain, and redirects if `REMOVE_WWW` is `True`. It silently passes if `PREPEND_WWW` is also `True`. For some reason, Django won't [include](#) a `REMOVE_WWW` setting. Thanks to Daniel Ryan's [GitHub Gist](#) for some inspiration.

- [Package distribution](#)
- [Code repository](#)
- [Documentation](#)
- [Tests](#)

CHAPTER 1

Install

```
$ pip install django-removewww
```

Add to `settings.py`.

```
MIDDLEWARE = [
    # ...
    'removewww.middleware.RemoveWwwMiddleware',
]

REMOVE_WWW = True
```

Adding to `INSTALLED_APPS` is unnecessary unless you want to run the tests.

CHAPTER 2

Contents

Install

Install with the `pip` package manager.

```
$ mkvirtualenv myenv -p python3
$ pip install django
$ pip install django-removewww
```

After creating a project, add `removewww.middleware.RemoveWwwMiddleware` to `MIDDLEWARE` in `settings.py`. Set the `REMOVE_WWW` boolean to `True`.

```
MIDDLEWARE = [
    # ...
    'removewww.middleware.RemoveWwwMiddleware',
]

REMOVE_WWW = True
```

Adding to `INSTALLED_APPS` is unnecessary unless you want to run the tests.

The middleware is compatible with pre-Django 1.10-style middleware because it inherits from `django.utils.deprecation.MiddlewareMixin`.

```
MIDDLEWARE_CLASSES = (
    # ...
    'removewww.middleware.RemoveWwwMiddleware',
)

REMOVE_WWW = True
```

Remember to update your `requirements.txt` file. In your project directory:

```
$ pip freeze > requirements.txt
```

Documentation

Full documentation is available online.

However, you can also build the documentation from source. Enter your virtual environment.

```
$ workon myvenv
```

Clone the code repository.

```
$ git clone git@github.com:richardcornish/django-removewww.git
$ cd django-removewww/
```

Install `Sphinx`, `sphinx-autobuild`, and `sphinx_rtd_theme`.

```
$ pip install sphinx sphinx-autobuild sphinx_rtd_theme
```

Create an HTML build.

```
$ (cd docs/ && make html)
```

Or use `sphinx-autobuild` to watch for live changes.

```
$ sphinx-autobuild docs/ docs/_build_html
```

Open 127.0.0.1:8000.

Tests

Continuous integration test results are available online.

However, you can also test the source code.

```
$ workon myvenv
$ django-admin test removewww.tests --settings="removewww.tests.settings"

Creating test database for alias 'default'...
.....
-----
Ran 10 tests in 0.009s

OK
Destroying test database for alias 'default'...
```

A bundled settings file allows you to test the code without even creating a Django project.

CHAPTER 3
