# CHAPTER 1

---

## Installation

---

The preferred way to install `django2-propeller` is `pip`:

```
$ pip install django2-propeller
```

Alternatively, you can install download or clone this repo and install from its folder with:

```
$ pip install -e .
```

In your project, you should add `django2-propeller` to your `requirements.txt`.

Be sure to use `virtualenv` if you develop python projects.

Add to `INSTALLED_APPS` in your `settings.py`:

```
'django2_propeller',
```

After installation, the [Quickstart](#) will get you on your way to using `django2-propeller`.

After *Installation*, you can use `django-propeller` in your templates.:

Load the propeller library and use the `propeller_*` tags:

## 2.1 Example template

```
{# Load the tag library #}
{% load propeller %}

{# Load CSS and JavaScript #}
{% propeller_css %}
{% propeller_javascript %}

{# Display django.contrib.messages as Bootstrap alerts #}
{% propeller_messages %}

{# Display a form #}
<form action="/url/to/submit/" method="post" class="form">
  {% csrf_token %}
  {% propeller_form form %}
  {% buttons %}
    <button type="submit" class="btn btn-primary">
      {% propeller_icon "star" %} Submit
    </button>
  {% endbuttons %}
</form>

{# Read the documentation for more information #}
```

## 2.2 Template tags and filters

Refer to *Template tags and filters* for more information.

## 2.3 Settings

You can set defaults for `django-propeller` in your settings file. Refer to *Settings* for more information.

## 2.4 Demo application

The demo application provides a number of useful examples.

clone the repo:

```
$ git clone https://github.com/tfroehlich82/django-propeller.git
```

cd into the cloned directory:

```
$ cd django-propeller
```

run the testserver:

```
$ python manage.py runserver
```

open your browser and browse to:

```
http://127.0.0.1:8000
```

---

## Template tags and filters

---

---

**Note:** All the following examples it is understood that you have already loaded the `propeller` template tag library, placing the code below in the beginning that each template that `propeller` template tag library will be used. Read the *Installation* and *Quickstart* sections on how to accomplish this.

---

### 3.1 `propeller_form`

`django2_propeller.templatetags.propeller.propeller_form(*args, **kwargs)`

Render a form

**Tag name:**

```
propeller_form
```

**Parameters:**

**form** The form that is to be rendered

**exclude** A list of field names (comma separated) that should not be rendered E.g. `exclude=subject,bcc`

See *propeller\_field* for other arguments

**Usage:**

```
{% propeller_form form %}
```

**Example:**

```
{% propeller_form form layout='inline' %}
```

## 3.2 propeller\_form\_errors

`django2_propeller.templatetags.propeller.propeller_form_errors` (\*args, \*\*kwargs)

Render form errors

**Tag name:**

```
propeller_form_errors
```

**Parameters:**

**form** The form that is to be rendered

**type** Control which type of errors should be rendered.

One of the following values:

- 'all'
- 'fields'
- 'non\_fields'

**default** 'all'

**layout** Context value that is available in the template `propeller/form_errors.html` as `layout`.

**Usage:**

```
{% propeller_form_errors form %}
```

**Example:**

```
{% propeller_form_errors form layout='inline' %}
```

## 3.3 propeller\_formset

`django2_propeller.templatetags.propeller.propeller_formset` (\*args, \*\*kwargs)

Render a formset

**Tag name:**

```
propeller_formset
```

**Parameters:**

**formset** The formset that is being rendered

See [propeller\\_field](#) for other arguments

**Usage:**

```
{% propeller_formset formset %}
```

**Example:**

```
{% propeller_formset formset layout='horizontal' %}
```

## 3.4 propeller\_formset\_errors

django2\_propeller.templatetags.propeller.**propeller\_formset\_errors**(\*args, \*\*kwargs)

Render formset errors

**Tag name:**

```
propeller_formset_errors
```

**Parameters:**

**formset** The formset that is being rendered

**layout** Context value that is available in the template `propeller/form_errors.html` as `layout`.

**Usage:**

```
{% propeller_formset_errors formset %}
```

**Example:**

```
{% propeller_formset_errors formset layout='inline' %}
```

## 3.5 propeller\_field

django2\_propeller.templatetags.propeller.**propeller\_field**(\*args, \*\*kwargs)

Render a field

**Tag name:**

```
propeller_field
```

**Parameters:**

**field** The form field to be rendered

**layout** If set to `'horizontal'` then the field and label will be rendered side-by-side, as long as there is no `field_class` set as well.

**form\_group\_class** CSS class of the `div` that wraps the field and label.

**default** `'form-group'`

**field\_class** CSS class of the `div` that wraps the field.

**label\_class** CSS class of the `label` element. Will always have `control-label` as the last CSS class.

**show\_help** Show the field's help text, if the field has help text.

**default** `True`

**show\_label** Whether the show the label of the field.

**default** True

**exclude** A list of field names that should not be rendered

**set\_required** When set to True and the field is required then the `required` attribute is set on the rendered field. This only works up to Django 1.8. Higher Django versions handle `required` natively.

**default** True

**set\_disabled** When set to True then the `disabled` attribute is set on the rendered field. This only works up to Django 1.8. Higher Django versions handle `disabled` natively.

**default** False

**size** Controls the size of the rendered `div.form-group` through the use of CSS classes.

One of the following values:

- 'small'
- 'medium'
- 'large'

**placeholder** Sets the placeholder text of a textbox

**horizontal\_label\_class** Class used on the label when the `layout` is set to `horizontal`.

**default** 'col-md-3'. Can be changed in [Settings](#)

**horizontal\_field\_class** Class used on the field when the `layout` is set to `horizontal`.

**default** 'col-md-9'. Can be changed in [Settings](#)

**addon\_before** Text that should be prepended to the form field. See the *propeller docs* <<http://getpropeller.com/components/#input-groups-basic>> for an example.

**addon\_after** Text that should be appended to the form field. See the *propeller docs* <<http://getpropeller.com/components/#input-groups-basic>> for an example.

**addon\_before\_class** Class used on the span when `addon_before` is used.

One of the following values:

- 'input-group-addon'
- 'input-group-btn'

**default** input-group-addon

**addon\_after\_class** Class used on the span when `addon_after` is used.

One of the following values:

- 'input-group-addon'
- 'input-group-btn'

**default** input-group-addon

**error\_css\_class** CSS class used when the field has an error

**default** 'has-error'. Can be changed [Settings](#)

**required\_css\_class** CSS class used on the `div.form-group` to indicate a field is required

**default** `''`. Can be changed [Settings](#)

**bound\_css\_class** CSS class used when the field is bound

**default** `'has-success'`. Can be changed [Settings](#)

**Usage:**

```
{% propeller_field field %}
```

**Example:**

```
{% propeller_field field show_label=False %}
```

## 3.6 propeller\_label

`django2_propeller.templatetags.propeller.propeller_label(*args, **kwargs)`

Render a label

**Tag name:**

```
propeller_label
```

**Parameters:**

**content** The label's text

**label\_for** The value that will be in the `for` attribute of the rendered `<label>`

**label\_class** The CSS class for the rendered `<label>`

**label\_title** The value that will be in the `title` attribute of the rendered `<label>`

**Usage:**

```
{% propeller_label content %}
```

**Example:**

```
{% propeller_label "Email address" label_for="exampleInputEmail1" %}
```

## 3.7 propeller\_button

`django2_propeller.templatetags.propeller.propeller_button(*args, **kwargs)`

Render a button

**Tag name:**

```
propeller_button
```

**Parameters:**

**content** The text to be displayed in the button

**button\_type** Optional field defining what type of button this is.

Accepts one of the following values:

- 'submit'
- 'reset'
- 'button'
- 'link'

**style** Optional field defining which style button should have.

Accepts one of the following values:

- 'default'
- 'raised'
- 'flat'
- 'outline'

**icon** Name of an icon to render in the button's visible content. See [propeller\\_icon](#) for acceptable values.

**button\_class** The class of button to use. If none is given, btn-default will be used.

**extra\_classes** Any extra CSS classes that should be added to the button.

**size** Optional field to control the size of the button.

Accepts one of the following values:

- 'xs'
- 'sm'
- 'small'
- 'md'
- 'medium'
- 'lg'
- 'large'

**href** Render the button as an <a> element. The href attribute is set with this value.

**name** Value of the name attribute of the rendered element.

**value** Value of the value attribute of the rendered element.

**Usage:**

```
{% propeller_button content %}
```

**Example:**

```
{% propeller_button "Save" button_type="submit" button_class="btn-primary" %}
```

## 3.8 propeller\_icon

django2\_propeller.templatetags.propeller.**propeller\_icon**(icon, \*\*kwargs)

Render an icon

**Tag name:**

propeller\_icon

**Parameters:**

**icon** Icon name. See the [Propeller docs](#) for all icons.

**size** Size of the icon. Must be one of 'xs', 'sm', 'md', or 'lg'. Default: 'sm'

**extra\_classes** Extra CSS classes to add to the icon HTML. Optional

**title** A title for the icon (HTML title attribute). Optional

**Usage:**

```
{% propeller_icon icon %}
```

**Example:**

```
{% propeller_icon "star" %}
```

## 3.9 propeller\_bootstrap\_icon

django2\_propeller.templatetags.propeller.**propeller\_bootstrap\_icon** (*icon*,  
\*\**kwargs*)

Render an icon

**Tag name:**

propeller\_bootstrap\_icon

**Parameters:**

**icon** Icon name. See the [Bootstrap docs](#) for all icons.

**extra\_classes** Extra CSS classes to add to the icon HTML. Optional

**title** A title for the icon (HTML title attribute). Optional

**Usage:**

```
{% propeller_bootstrap_icon icon %}
```

**Example:**

```
{% propeller_bootstrap_icon "star" %}
```

## 3.10 propeller\_alert

django2\_propeller.templatetags.propeller.**propeller\_alert** (*content*,  
*alert\_type*='info', *dis-*  
*missable*=True)

Render an alert

**Tag name:**

```
propeller_alert
```

**Parameters:**

**content** HTML content of alert

**alert\_type**

- 'info'
- 'warning'
- 'danger'
- 'success'

**default** 'info'

**dismissable** boolean, is alert dismissable

**default** True

**Usage:**

```
{% propeller_alert content %}
```

**Example:**

```
{% propeller_alert "Something went wrong" alert_type='error' %}
```

## 3.11 buttons

django2\_propeller.template\_tags.propeller.**propeller\_button**(\*args, \*\*kwargs)

Render a button

**Tag name:**

```
propeller_button
```

**Parameters:**

**content** The text to be displayed in the button

**button\_type** Optional field defining what type of button this is.

Accepts one of the following values:

- 'submit'
- 'reset'
- 'button'
- 'link'

**style** Optional field defining which style button should have.

Accepts one of the following values:

- 'default'
- 'raised'
- 'flat'
- 'outline'

**icon** Name of an icon to render in the button's visible content. See [propeller\\_icon](#) for acceptable values.

**button\_class** The class of button to use. If none is given, btn-default will be used.

**extra\_classes** Any extra CSS classes that should be added to the button.

**size** Optional field to control the size of the button.

Accepts one of the following values:

- 'xs'
- 'sm'
- 'small'
- 'md'
- 'medium'
- 'lg'
- 'large'

**href** Render the button as an <a> element. The href attribute is set with this value.

**name** Value of the name attribute of the rendered element.

**value** Value of the value attribute of the rendered element.

#### Usage:

```
{% propeller_button content %}
```

#### Example:

```
{% propeller_button "Save" button_type="submit" button_class="btn-primary" %}
```

django2\_propeller.templatetags.propeller.**propeller\_fab**(\*args, \*\*kwargs)

Render a floating action button

#### Tag name:

```
propeller_fab
```

#### Parameters:

**content** The text to be displayed in the button

**button\_type** Optional field defining what type of button this is.

Accepts one of the following values:

- 'submit'
- 'reset'
- 'button'
- 'link'

**style** Optional field defining which style button should have.

Accepts one of the following values:

- 'default'

- 'raised'
- 'flat'
- 'outline'

**icon** Name of an icon to render in the button's visible content. See [propeller\\_icon](#) for acceptable values.

**button\_class** The class of button to use. If none is given, btn-default will be used.

**extra\_classes** Any extra CSS classes that should be added to the button.

**size** Optional field to control the size of the button.

Accepts one of the following values:

- 'xs'
- 'sm'
- 'small'
- 'md'
- 'medium'
- 'lg'
- 'large'

**href** Render the button as an <a> element. The href attribute is set with this value.

**name** Value of the name attribute of the rendered element.

**value** Value of the value attribute of the rendered element.

**Usage:**

```
{% propeller_fab content %}
```

**Example:**

```
{% propeller_fab "Save" button_type="submit" button_class="btn-primary" %}
```

## 3.12 propeller\_messages

django2\_propeller.templatetags.propeller.**propeller\_messages** (*context*, *\*args*, *\*\*kwargs*)

Show django.contrib.messages Messages in propeller alert containers.

In order to make the alerts dismissable (with the close button), we have to set the jquery parameter too when using the propeller\_javascript tag.

Uses the template propeller/messages.html.

**Tag name:**

```
propeller_messages
```

**Parameters:**

None.

**Usage:**

```
{% propeller_messages %}
```

**Example:**

```
{% propeller_javascript jquery=1 %}  
{% propeller_messages %}
```

## 3.13 propeller\_pagination

`django2_propeller.template_tags.propeller.propeller_pagination` (*page*, *\*\*kwargs*)

Render pagination for a page

**Tag name:**

```
propeller_pagination
```

**Parameters:**

**page** The page of results to show.

**pages\_to\_show** Number of pages in total

**default** 11

**url** URL to navigate to for pagination forward and pagination back.

**default** None

**size** Controls the size of the pagination through CSS. Defaults to being normal sized.

One of the following:

- 'small'
- 'large'

**default** None

**extra** Any extra page parameters.

**default** None

**parameter\_name** Name of the paging URL parameter.

**default** 'page'

**Usage:**

```
{% propeller_pagination page %}
```

**Example:**

```
{% propeller_pagination lines url="/pagination?page=1" size="large" %}
```

## 3.14 propeller\_navbar

---

**Hint:** See also [Navbar](#) for how to create navbar instances

---

`django2_propeller.templatetags.propeller.propeller_navbar(navbar)`  
Render a navbar.

**Tag name:**

```
propeller_navbar
```

**Parameters:**

**navbar** The previously defined navbar instance

**Usage:**

```
{% propeller_navbar navbar_instance %}
```

## 3.15 propeller\_card

---

**Hint:** See also [Card](#) for how to create card instances

---

`django2_propeller.templatetags.propeller.propeller_card(card)`  
Render a propeller card.

**Tag name:**

```
propeller_card
```

**Parameters:**

**card** The previously defined card instance

**Usage:**

```
{% propeller_card card_instance %}
```

## 3.16 propeller\_textfilters

`django2_propeller.templatetags.propeller.pmd_display_text(text, size=1)`  
Render text as a Propeller display text (heading).

**Tag name:**

```
pmd_display_text
```

**Parameters:**

```
size
    Controls the size of the heading.

    An integer from 1 (normal) to 4 (very large)

    :default: ``1``
```

**Usage:**

```
{{ text_variable|pmd_display_text:size }}
```

**Example:**

```
{{ my_text|pmd_display_text:3 }}
```

`django2_propeller.templatetags.propeller.pmd_muted_text` (*text*)  
Render a muted text (secondary heading).

**Tag name:**

```
pmd_muted_text
```

**Usage:**

```
{{ text_variable|pmd_muted_text }}
```

`django2_propeller.templatetags.propeller.pmd_lead_text` (*text*)  
Render text as a Propeller lead text (intro).

**Tag name:**

```
pmd_lead_text
```

**Usage:**

```
{{ text_variable|pmd_lead_text }}
```

`django2_propeller.templatetags.propeller.pmd_mark_text` (*text*)  
Render highlighted text.

**Tag name:**

```
pmd_mark_text
```

**Usage:**

```
{{ text_variable|pmd_mark_text }}
```

`django2_propeller.templatetags.propeller.pmd_strike_text` (*text*, *autoescape=True*)  
Render striked text.

**Tag name:**

```
pmd_strike_text
```

**Usage:**

```
{{ text_variable|pmd_strike_text }}
```

`django2_propeller.templatetags.propeller.pmd_underline_text` (*text*)

Render underlined text.

**Tag name:**

```
pmd_underline_text
```

**Usage:**

```
{{ text_variable|pmd_underline_text }}
```

`django2_propeller.templatetags.propeller.pmd_bold_text` (*text*)

Render bold text.

**Tag name:**

```
pmd_bold_text
```

**Usage:**

```
{{ text_variable|pmd_bold_text }}
```

`django2_propeller.templatetags.propeller.pmd_italic_text` (*text*)

Render italic text.

**Tag name:**

```
pmd_italic_text
```

**Usage:**

```
{{ text_variable|pmd_italic_text }}
```

## 3.17 propeller\_jquery\_url

`django2_propeller.templatetags.propeller.propeller_jquery_url` ()

Return the full url to jQuery file to use

Default value: `//code.jquery.com/jquery.min.js`

This value is configurable, see Settings section

**Tag name:**

```
propeller_jquery_url
```

**Usage:**

```
{% propeller_jquery_url %}
```

**Example:**

```
{% propeller_jquery_url %}
```

## 3.18 propeller\_javascript\_url

`django2_propeller.templatetags.propeller.propeller_javascript_url()`

Return the full url to the Propeller JavaScript library

Default value: None

This value is configurable, see Settings section

**Tag name:**

```
propeller_javascript_url
```

**Usage:**

```
{% propeller_javascript_url %}
```

**Example:**

```
{% propeller_javascript_url %}
```

## 3.19 propeller\_css\_url

`django2_propeller.templatetags.propeller.propeller_css_url()`

Return the full url to the Propeller CSS library

Default value: None

This value is configurable, see Settings section

**Tag name:**

```
propeller_css_url
```

**Usage:**

```
{% propeller_css_url %}
```

**Example:**

```
{% propeller_css_url %}
```

## 3.20 propeller\_css

`django2_propeller.templatetags.propeller.propeller_css()`

Return HTML for Propeller CSS.

Adjust url in settings. If no url is returned, we don't want this statement to return any HTML. This is intended behavior.

Default value: None

This value is configurable, see Settings section

**Tag name:**

```
propeller_css
```

**Usage:**

```
{% propeller_css %}
```

**Example:**

```
{% propeller_css %}
```

## 3.21 propeller\_javascript

`django2_propeller.templatetags.propeller.propeller_javascript` (*jquery=None*)

Return HTML for Propeller JavaScript.

Adjust url in settings. If no url is returned, we don't want this statement to return any HTML. This is intended behavior.

Default value: None

This value is configurable, see Settings section

**Tag name:**

```
propeller_javascript
```

**Parameters:**

**jquery** Truthy to include jQuery as well as propeller

**Usage:**

```
{% propeller_javascript %}
```

**Example:**

```
{% propeller_javascript jquery=1 %}
```

## 4.1 NavBarLinkItem

**class** `django2_propeller.navbar.NavBarLinkItem` (*name=""*, *url=None*, *icon=None*)

Generates a Link navbar item or a Link DropDown item.

**Parameters:**

**name** The display name for the item. (for example: 'Home')

**url** The address for the link item. Can be a absolute URL or a resolvable Django url. (for example: 'http://example.org' or 'home'). Optional.

**icon** not yet supported

## 4.2 NavBarDropDownDivider

**class** `django2_propeller.navbar.NavBarDropDownDivider`

Generates a DropDown Divider item.

## 4.3 NavBarDropDownItem

**class** `django2_propeller.navbar.NavBarDropDownItem` (*name=""*, *items=None*, *url=None*)

Generates a DropDown navbar item.

**Parameters:**

**name** The display name for the item. (for example: 'Home')

**url** The address for the link item. Can be a absolute URL or a resolvable Django url. (for example: 'http://example.org' or 'home'). Optional.

**icon** not yet supported

**items** A list containing NavBarLinkItems and/or NavBarDropDownDivider. Optional.

## 4.4 CustomItem

**class** django2\_propeller.navbar.CustomItem(*html=""*)

Returns a custom NavBar item.

Just assign some raw HTML code to *html* attribute.

## 4.5 NavBar

**class** django2\_propeller.navbar.NavBar

NavBar is a class that generates a NavBar.

**Parameters:**

**brandname** The brand shown on the very left of the navbar.

**brandurl** The address for the brand name. Can be a absolute URL or a resolvable Django url. (for example: 'http://example.org' or 'home'). Optional.

**items** A list containing NavBarLinkItems and/or NavBarDropDownItems. Optional.

**style\_inverse** Generate a dark navbar if true (default) or a light navbar if false.

**style\_static** Sets the static style for the navbar. Static if true (default) or floating on top if false.

## 4.6 NavBar Example

navbar.py:

```
from django2_propeller.navbar import NavBar, NavBarLinkItem, NavBarDropDownItem, \
↳ NavBarDropDownDivider

class DemoNavBar(NavBar):
    brandname = "Brand"
    brandurl = "http://example.org"
    items = [
        NavBarLinkItem("Link"),
        NavBarDropDownItem("DropDown", [
            NavBarLinkItem("Action"),
            NavBarLinkItem("Another action"),
            NavBarDropDownDivider(),
            NavBarLinkItem("Separated link"),
            NavBarDropDownDivider(),
            NavBarLinkItem("One more separated link"),
        ])
    ]
```

your\_view.py:

```
from django.views.generic.base import TemplateView
from django2_propeller.views import NavBarMixin
from your_project.navbar import DemoNavBar

class HomePageView(TemplateView, NavBarMixin):
    template_name = 'your_template.html'
    navbar_class = DemoNavBar
```

your\_template.html:

```
{% load propeller %}
{% propeller_navbar navbar %}
```

### 5.1 CardTitle

**class** `django2_propeller.card.CardTitle`  
Renders a Card Title.

**Parameters:**

**text** The display text for the title.

**size** The size for the title as integer. Works with the h-tag, so size=1 is bigger than size=3. Optional.  
(default=3)

### 5.2 CardSubtitle

**class** `django2_propeller.card.CardSubtitle`  
Renders a Card Subtitle.

**Parameters:**

**text** The display text for the subtitle.

### 5.3 CardBody

**class** `django2_propeller.card.CardBody`  
Renders a Card Body.

**Parameters:**

**text** The text to display in the body.

## 5.4 CardHeader

**class** `django2_propeller.card.CardHeader`

Renders a Card Header.

**Parameters:**

**content\_left** A list of items to display on the left of header. May contain Button, FAB, Image, CardTitle, or CardSubtitle.

**content\_middle** A list of items to display in the middle of header. May contain Button, FAB, Image, CardTitle, or CardSubtitle.

## 5.5 CardMediaActions

**class** `django2_propeller.card.CardMediaActions`

Renders Card Media Actions.

**Parameters:**

**items** A list of items to display in the Card Media Action section. May contain Button or FAB.

## 5.6 CardActions

**class** `django2_propeller.card.CardActions`

Renders Card Actions.

**Parameters:**

**items** A list of items to display in the Card Action section. May contain Button or FAB.

## 5.7 CardMediaImage

**class** `django2_propeller.card.CardMediaImage`

Renders a Card Media Image.

**Parameters:**

**image** Must be an instance of an Image.

## 5.8 CardMedia

**class** `django2_propeller.card.CardMedia`

Renders Card Media

**Parameters:**

**content**

**if style\_inline=True:** A list of items to display in the card media section. May contain CardMediaImage, CardTitle, or CardSubtitle.

**or if style\_inline=False: (default)** A instance of CardMediaImage

**style\_inline** Display card with inline style if true. (Default: False)

## 5.9 Card

**class** `django2_propeller.card.Card`  
 Card is a class that generates a Propeller Card.

**Parameters:**

- primary\_title** An instance of CardTitle. Optional.
- secondary\_title** An instance of CardSubtitle. Optional.
- header** An instance of CardHeader. Optional.
- media** An instance of CardMedia. Optional.
- body** An instance of CardBody. Optional.
- actions** An instance of CardActions. Optional.
- media\_actions** An instance of CardMediaActions. Optional.
- style\_inverse** Display dark style if true. (Default: False)
- style\_inline** Display card with inline style if true. (Default: False)
- width** Width of the card in Bootstrap grid (col-md) as integer. (Default: 4)

## 5.10 Card Example

card.py:

```
from django2_propeller.card import Card, CardHeader, CardActions, CardMediaActions, \
↳ CardTitle, CardSubtitle, \
CardMediaImage, CardBody, CardMedia
from django2_propeller.components import Image, Button, FAB

class DemoTitle(CardTitle):
    text = "Title goes here"
    size = 2

class DemoSubtitle(CardSubtitle):
    text = "Secondary text"

class DemoMediaImage(CardMediaImage):
    image = Image(source="http://propeller.in/assets/images/profile-pic.png", \
↳ responsive=True)

class DemoMedia(CardMedia):
    content = [DemoMediaImage(), ]

class DemoBody(CardBody):
    text = "Cards provide context and an entry point to more robust information and \
↳ views." \
```

(continues on next page)

(continued from previous page)

```
"Don't overload cards with extraneous information or actions."

class DemoHeader(CardHeader):
    content_middle = [DemoTitle(), DemoSubtitle()]

class DemoActions(CardActions):
    items = [
        Button(content='primary', button_class='btn-primary'),
        Button('Action'),
    ]

class DemoMediaActions(CardMediaActions):
    items = [
        FAB('', button_class='btn-primary', icon='share', style='flat', size='sm'),
        FAB('', button_class='btn-primary', icon='thumb_up', style='flat', size='sm'),
        FAB('', button_class='btn-primary', icon='drafts', style='flat', size='sm')
    ]

class DemoCard(Card):
    primary_title = DemoTitle()
    secondary_title = DemoSubtitle()
    header = DemoHeader()
    actions = DemoActions()
    media_actions = DemoMediaActions()
    media = DemoMedia()
    body = DemoBody()
```

your\_template.html:

```
{% load propeller %}
{% propeller_card card %}
```

## CHAPTER 6

---

### Settings

---

The django-propeller has some pre-configured settings.

They can be modified by adding a dict variable called `PROPELLER` in your `settings.py` and customizing the values you want;

The `PROPELLER` dict variable contains these settings and defaults:

```
# Default settings
PROPELLER = {

    # The URL to the jQuery JavaScript file
    'jquery_url': '//code.jquery.com/jquery.min.js',

    # The Bootstrap base URL
    'base_url': '//maxcdn.bootstrapcdn.com/bootstrap/3.3.7/',

    # The complete URL to the Bootstrap CSS file (None means derive it from base_url)
    'css_url': None,

    # The complete URL to the Bootstrap CSS file (None means no theme)
    'theme_url': None,

    # The complete URL to the Bootstrap JavaScript file (None means derive it from
    ↪base_url)
    'javascript_url': None,

    # Put JavaScript in the HEAD section of the HTML document (only relevant if you
    ↪use propeller.html)
    'javascript_in_head': False,

    # Include jQuery with Bootstrap JavaScript (affects django-propeller template
    ↪tags)
    'include_jquery': False,

    # Label class to use in horizontal forms
```

(continues on next page)

(continued from previous page)

```
'horizontal_label_class': 'col-md-3',

# Field class to use in horizontal forms
'horizontal_field_class': 'col-md-9',

# Set HTML required attribute on required fields, for Django <= 1.8 only
'set_required': True,

# Set HTML disabled attribute on disabled fields, for Django <= 1.8 only
'set_disabled': False,

# Set placeholder attributes to label if no placeholder is provided
'set_placeholder': True,

# Class to indicate required (better to set this in your Django form)
'required_css_class': '',

# Class to indicate error (better to set this in your Django form)
'error_css_class': 'has-error',

# Class to indicate success, meaning the field has valid input (better to set_
→ this in your Django form)
'success_css_class': 'has-success',

# Renderers (only set these if you have studied the source and understand the_
→ inner workings)
'formset_renderers': {
    'default': 'propeller.renderers.FormsetRenderer',
},
'form_renderers': {
    'default': 'propeller.renderers.FormRenderer',
},
'field_renderers': {
    'default': 'propeller.renderers.FieldRenderer',
    'inline': 'propeller.renderers.InlineFieldRenderer',
},
}
```

Extend `propeller/propeller.html` template to automatically include the needed CSS and JS for Bootstrap and Propeller.

You can customize the output of `django-propeller` by writing your own templates. These templates are available:

### 7.1 `propeller/field_help_text_and_errors.html`

This renders the help text and error of each field.

Variable `help_text_and_errors` contains an array of strings.

### 7.2 `propeller/form_errors.html`

This renders the non field errors of a form.

Variable `errors` contains an array of strings.

### 7.3 `propeller/messages.html`

This renders the Django messages variable.

Variable `messages` contains the messages as described in <https://docs.djangoproject.com/en/dev/ref/contrib/messages/#displaying-messages>

`messages` is passed through three built-in filters

*safe* <<https://docs.djangoproject.com/en/dev/ref/templates/builtins/#std:templatefilter-safe>>

*urlize* <<https://docs.djangoproject.com/en/dev/ref/templates/builtins/#std:templatefilter-urlize>>

*linebreaksbr* <<https://docs.djangoproject.com/en/dev/ref/templates/builtins/#std:templatefilter-linebreaksbr>>

## 7.4 Other

There are two more templates, `propeller/propeller.html` and `propeller/pagination.html`. You should consider these private for now, meaning you can use them but not modify them.

## CHAPTER 8

---

### Indices and tables

---

- `genindex`
- `modindex`
- `search`

## C

Card (class in *django2\_propeller.card*), 27  
CardActions (class in *django2\_propeller.card*), 26
