1.1 Code Overview

Here you will find an overview of ezurl's objects and methods.

1.1.1 ezurl Package

class `ezurl.Url` (*hostname*, *scheme*='https', *querydelimiter*='&')

This class allows more flexible generation of URLs. This prevents the mindless manipulation string that occur in projects that require generation of a wide range of urls

fragment (*text*)

Allows for fragments at the end of the url

page (**args*)

Pages takes **args* and adds pages in order

pages

Returns a list of pages

path

Returns str of the Path

query (*listdelimiter*='+', ***kwargs*)

Url queries

Parameters listdelimiter – Specifies what list delimiter should be

Kwargs (Since its a dictionary) are not ordered. You must call the method again if you absolutely need one query after another or vice versa.

e

ezurl, [1](#)

E

[ezurl \(module\)](#), 1

F

[fragment\(\) \(ezurl.Url method\)](#), 1

P

[page\(\) \(ezurl.Url method\)](#), 1

[pages \(ezurl.Url attribute\)](#), 1

[path \(ezurl.Url attribute\)](#), 1

Q

[query\(\) \(ezurl.Url method\)](#), 1

U

[Url \(class in ezurl\)](#), 1
