Release 1.0

Diederik van der Boor

May 09, 2016

1	Installation	3
2	Frontend styling	5
2.1	Contributing	5

Displaying a Bootstrap 3 [pager](#) in a page

Features:

- Arrows
- Previous/next links
- Automatic title retrieval

Installation

First install the module, preferably in a virtual environment. It can be installed from PyPI:

```
pip install fluentcms-pager
```

First make sure the project is configured for [django-fluent-content](#)s.

Then add the following settings:

```
INSTALLED_APPS += (  
    'fluentcms_pager',  
)
```

The database tables can be created afterwards:

```
./manage.py migrate
```

Frontend styling

The pager is rendered with the HTML that Bootstrap prescribes:

```
<ul class="pager">
  <li class="previous"><a href="#"><span aria-hidden="true">&larr;</span> Older</a></li>
  <li class="next"><a href="#">Newer <span aria-hidden="true">&rarr;</span></a></li>
</ul>
```

The standard Bootstrap 3 CSS will provide a reasonable styling for this, which can either be overwritten, or replaced in your own CSS files.

2.1 Contributing

If you like this module, forked it, or would like to improve it, please let us know! Pull requests are welcome too. :-)
