# frange Documentation

*Release 0.0.1*

**Ashley Setter**

**Jul 01, 2017**

---

## Contents:

---

<b>1</b>	<b>frange package</b>	<b>1</b>
1.1	frange.frange module . . . . .	1
<b>2</b>	<b>Indices and tables</b>	<b>3</b>
	<b>Python Module Index</b>	<b>5</b>

# CHAPTER 1

---

## frange package

---

### frange.frange module

`frange.frange.drange(start, stop, step)`

A generator that yields successive samples from start (inclusive) to stop (exclusive) in step intervals.

**Parameters** `start` : float

starting point

`stop` : float

stopping point

`step` : float

stepping interval

**Yields** `x` : float

next sample

`class frange.frange.frange(start, stop, step)`

Return an object can be used to generate a generator or an array of floats from start (inclusive) to stop (exclusive) by step. This object stores the start, stop, step and length of the data. Uses less memory than storing a large array.

### Methods

---

`get_array()`

Returns an numpy array containing the values from start (inclusive) to stop (exclusive) in step steps.

---

`get_generator()`

Returns a generator for the frange object instance.

---

**`get_array()`**

Returns an numpy array containing the values from start (inclusive) to stop (exclusive) in step steps.

---

**Returns** `array` : ndarray

Array of values from start (inclusive) to stop (exclusive) in step steps.

**get\_generator()**

Returns a generator for the frange object instance.

**Returns** `gen` : generator

A generator that yields successive samples from start (inclusive) to stop (exclusive) in step steps.

## CHAPTER 2

---

### Indices and tables

---

- genindex
- modindex
- search

---

## Python Module Index

---

f

frange.frange, 1

---

## Index

---

### D

drange() (in module `frange.frange`), 1

### F

frange (class in `frange.frange`), 1

`frange.frange` (module), 1

### G

`get_array()` (`frange.frange.frange` method), 1

`get_generator()` (`frange.frange.frange` method), 2
