TABLE OF CONTENTS

1.1 friendlyargs

1.1.1 friendlyargs package

Submodules

friendlyargs.fargs module

Decorators that simplify interacting with the FriendlyArgs framework

`friendlyargs.fargs.count` (*short_name*, *long_name*)

Decorates a command function, providing an optional parameter which counts the occurrences of a character.

Useful for things like verbosity flags which look like ‘-vvvv’

Args:

short_name (str): single character parameter short name, of the form “-a” or “-b”

long_name (str): verbose descriptive name for the count parameter

`friendlyargs.fargs.main()`

Decorates the primary entry-point function for your command line application

friendlyargs.version module

Module contents

Abstraction layer for the Jenkins REST API designed to simplify the interaction with the Jenkins web interface from the Python scripting environment.

1.2 Overview

Command line interface library, as an alternative to the built in argparse library.

Comments, suggestions and bugs may be reported to the project [maintainer](#)

Full API documentation can be found on [ReadTheDocs.org](#).

1.3 Quick start guide

1. First, we recommend that you install the pip package manager if it is not already installed. See [here](#) for details.
2. Install friendlyargs directly from PyPI using PIP:

```
# pip install friendlyargs
```

3. import the friendlyargs module and start scripting!

PYTHON MODULE INDEX

f

`friendlyargs`, 3
`friendlyargs.fargs`, 3
`friendlyargs.version`, 3

INDEX

C

`count()` (*in module friendlyargs.fargs*), 3

F

`friendlyargs` (*module*), 3

`friendlyargs.fargs` (*module*), 3

`friendlyargs.version` (*module*), 3

M

`main()` (*in module friendlyargs.fargs*), 3
