# httpcode Documentation

*Release 0.5*

**Ruslan Spivak**

**Apr 26, 2017**

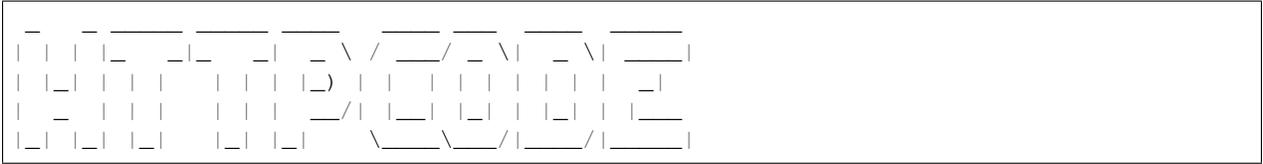

---

## Contents

---

<b>1</b>	<b>Installation</b>	<b>3</b>
<b>2</b>	<b>Usage</b>	<b>5</b>
<b>3</b>	<b>Roadmap</b>	<b>7</b>

*httpcode* is a little utility that explains the meaning of an HTTP status code on the command line.

# CHAPTER 1

---

## Installation

---

```
$ [sudo] pip install httpcode
```

There is also an official DEB package available at <http://packages.debian.org/sid/httpcode>

## CHAPTER 2

---

### Usage

---

#### Explain 405 status code

```
$ hc 405
Status code 405
Message: Method Not Allowed
Code explanation: Specified method is invalid for this resource.
```

#### Or 418 status code :)

```
$ hc 418
Status code 418
Message: I'm a teapot
Code explanation: The HTCPCP server is a teapot
```

#### List all codes

```
$ hc
Status code 100
Message: Continue
Code explanation: Request received, please continue

Status code 101
Message: Switching Protocols
Code explanation: Switching to new protocol; obey Upgrade header

Status code 200
Message: OK
Code explanation: Request fulfilled, document follows

...
```

#### Search code(s) by description (case-insensitive)

```
$ hc -s too
Status code 413
```

```
Message: Request Entity Too Large
Code explanation: Entity is too large.
```

```
Status code 414
Message: Request-URI Too Long
Code explanation: URI is too long.
```

### Filter codes with a regex

```
$ hc 30[12]
Status code 301
Message: Moved Permanently
Code explanation: Object moved permanently -- see URI list

Status code 302
Message: Found
Code explanation: Object moved temporarily -- see URI list
```

### Use an 'x' for any digit

```
$ hc 1xx
Status code 100
Message: Continue
Code explanation: Request received, please continue

Status code 101
Message: Switching Protocols
Code explanation: Switching to new protocol; obey Upgrade header
```

### Show help

```
$ hc -h
Usage: hc [code] [options]

code may contain regular expression or use 'x' to denote any digit
code examples: 418, 30[12], 3.*, 1xx

Without parameters lists all available
HTTP status codes and their description

Options:
  -h, --help          show this help message and exit
  -s SEARCH, --search=SEARCH
                      Search for a code by name or description. Search text
                      may contain regular expressions.
```

## CHAPTER 3

---

### Roadmap

---

Add more codes
