Contents

Retrieve data `get()` Retrieves any data from the connection. In which order you emitted, use `get()[number]` to retrieve that data. (Remember to subtract the `int` by one so that you don't get a out of range error if you go to the last value in the list.)

Open `open()` Open a new connection. (filename: `minsio.json`).

Emit `emit(<any type>)` Emits the argument to be `get()` ted.

Closing emit `closer(<any type>)` Emits the argument, then `close()` s the connection

Close `close()` Closes the connection. (`minsio.json`)
