
mpd_{pydb} Documentation
Release 1.0

Wieland Hoffmann

Nov 05, 2018

Contents

1 Installation	3
1.1 PyPI	3
1.2 Git	3
2 Usage	5
3 Song objects	7
4 MPD PyDB	9
5 Indices and tables	11
Python Module Index	13

Contents:

CHAPTER 1

Installation

1.1 PyPI

Lala is available on the Python Package Index. This makes installing it with [pip](#) as easy as:

```
pip install mpd_pydb
```

1.2 Git

If you want the latest code or even feel like contributing, the code is available on [Github](#).

You can easily clone the code with git:

```
git clone git://github.com/mineo/mpd_pydb.git
```

Now you can start hacking on the code or install it system-wide:

```
python setup.py install
```

CHAPTER 2

Usage

To use this module, simply import it:

```
import mpd_pydb
```

and read your MPD database into an *Database* object:

```
db = mpd_pydb.Database.read_file("/path/to/the/database.db")
```

CHAPTER 3

Song objects

A song object is a `namedtuple()` object with each tag type defined in the MPD database available as a field. In addition to the tag types you can configure in MPDs configuration file, 3 additional fields are available:

Time The length of the song as a `float`.

mtime The time at which the file was last modified, in Unix time as an `int`.

path The path to the file inside of MPDs music directory as an `Path` object

music_dir_ The absolute path to the music directory on the local hard drive. This is used to implement support for [PEP 519](#)'s `os.PathLike.__fspath__()` method on the song objects.

API:

CHAPTER 4

MPD PyDB

```
class mpd_pydb.db.Database(format_version, mpd_version, supported_tags, songs=None)
Bases: object
```

Parameters

- **format_version** (*int*) –
- **mpd_version** (*str*) –
- **supported_tags** (*iterable*) –
- **songs** (*[namedtuple]*) – A list of songs in the database

Raises

- **ValueError** – If the format_version is not supported or mpd_version is None
- **TypeError** – If supported_tags is not iterable

```
add_song(song)
```

Add song to this DB.

Parameters **song** (*namedtuple*) –

```
format_version = None
```

The database format version

```
mpd_version = None
```

The version of MPD that created this database

```
classmethod read_file(filename, music_dir=None)
```

Read the database in filename.

Parameters

- **filename** (*str*) – The path to the database file
- **music_dir** (*str*) – The path to MPDs music directory

```
songs = None
```

A list of songs in this database

supported_tags = None

A list containing the names of all supported tags

to_dataframe()

Convert this database to a pandas DataFrame. In addition to the tags already loaded, the two columns TotalDiscs and TotalTracks will be populated with the values from Disc and Track tags (ID3 only). The Disc and Track tags will no longer contain information about the total amount of discs and tracks after the conversion.

Return type `DataFrame`

CHAPTER 5

Indices and tables

- genindex
- modindex
- search

Python Module Index

m

`mpd_pydb.db`, [7](#)

Index

A

`add_song()` (`mpd_pydb.db.Database` method), 9

D

`Database` (class in `mpd_pydb.db`), 9

F

`format_version` (`mpd_pydb.db.Database` attribute), 9

M

`mpd_pydb.db` (module), 7

`mpd_version` (`mpd_pydb.db.Database` attribute), 9

P

Python Enhancement Proposals

PEP 519, 7

R

`read_file()` (`mpd_pydb.db.Database` class method), 9

S

`songs` (`mpd_pydb.db.Database` attribute), 9

`supported_tags` (`mpd_pydb.db.Database` attribute), 10

T

`to_dataframe()` (`mpd_pydb.db.Database` method), 10
