CHAPTER 1

Overview

MyTardis began at Monash University to solve the problem of users needing to store large datasets and share them with collaborators online. Its particular focus is on integration with scientific instruments, instrument facilities and research storage and computing infrastructure; to address the challenges of data storage, data access, collaboration and data publication.

[Read more...](#)

CHAPTER 2

Key features for users

The MyTardis data management platform is a software solution that manages research data and the associated metadata. MyTardis handles the underlying storage to ensure that data is securely archived and provides access to the data through a web portal. Data hosted in MyTardis can also be accessed via SFTP.

[Read more...](#)

CHAPTER 3

Key features for instrument facilities

MyTardis takes care of distributing data to your users. Its instrument integration technology takes care of securely and automatically shifting data from instrument to repository and makes it accessible by the right users.

[Read more...](#)

CHAPTER 4

Developing for MyTardis

MyTardis is mostly written in the [Python](#) programming language and is built on top of the [Django](#) web framework. A complete installation of the service also includes an [Elasticsearch](#) index, a [RabbitMQ](#)-based task queue, an [Nginx](#) server, and a [PostgreSQL](#) database.

To set up and manage these services we employ the [SaltStack](#) orchestration software and cloud technologies.

CHAPTER 5

Find out more

Project homepage <http://mytardis.org>

The source code is hosted at <https://github.com/mytardis/mytardis>

Documentation at <http://mytardis.readthedocs.org> includes

- User documentation
- Administrator documentation
- Developer documentation

The wiki at <https://github.com/mytardis/mytardis/wiki> includes

- Links to MyTardis add-ons, including apps and post-save filters
- Information about MyTardis community events

CHAPTER 6

Known deployments

- **Store.Synchrotron:** <https://store.synchrotron.org.au/>
- **Store.Monash:** <https://store.erc.monash.edu>
- **NIF ImageTrove:** <https://imagetrove.cai.uq.edu.au/>
- **MHTP Medical Genomics:** <https://mhtp-seq.erc.monash.edu/>
- **ANSTO:** <https://tardis.nbi.ansto.gov.au/>
- **Monash MyTardis Demo:** <https://mytardisdemo.erc.monash.edu/>

CHAPTER 7

Related projects and repositories

- **MyData:** <https://github.com/mytardis/mydata>
 - A desktop application for managing uploads to MyTardis
- **NIF ImageTrove:** <https://github.com/NIF-au/imagetrove>
 - A tool for ingesting and archiving NIF datasets, including
 - * Web front end: [MyTardis](#)
 - * A DICOM server: [DICOM ToolKit](#)
 - * A dataset uploader: [imagetrove-uploader](#)
 - * Federated authentication with the Australian Access Federation's [Rapid Connect](#) service
- **NIF ImageTrove Docker deployment:** <https://github.com/UWA-FoS/docker-mytardis>
 - For ease of deployment, all of ImageTrove's components are packaged into a Docker container.
- **NIF Trusted Data Repositories:** <https://github.com/NIF-au/TDR>
 - Delivering durable, reliable, high-quality image data

CHAPTER 8

Releases

The default branch on GitHub is `develop`. This is the cutting edge development version. Please DO NOT use this in production, as it may have bugs that eat your data.

The `master` branch is the current stable release with all the latest bugfixes included. It will move to newer versions automatically. Follow this branch if you want to stay up to date in a production environment.

Each version has its own branch named by version number. At the time of writing, the latest release is `4.1.0`, tagged from the `series-4.1` branch. Follow this branch for your production installation and perform version upgrades manually.

Each bugfix or set of fixes bumps the minor version and each new release is tagged, eg. `4.1.1`. Use tagged releases if you are paranoid about changes to the code you have not tested yourself.

To follow development, please see the contributing section below.

CHAPTER 9

Reporting Bugs

Bug reports and feature requests can be made via our [public issue tracker](#).

CHAPTER 10

Contributing

New contributors are always welcome, however all developers should review the [pull-request checklist](#) before making pull requests.

For any wishes, comments, praise etc. either open a GitHub issue or contact us.

Active developers are also welcome to join our Slack team.

Contact details can be found on [mytardis.org](#).

CHAPTER 11

Documentation

11.1 User Guide

11.1.1 Basics

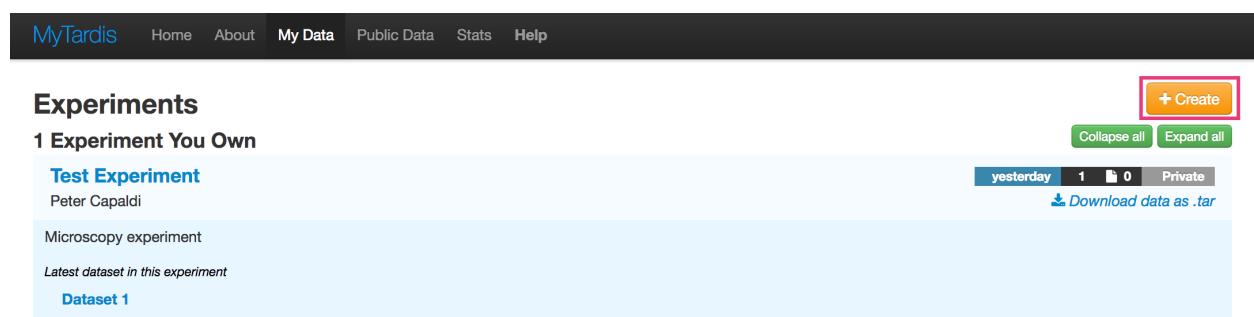

Organising Data

Data Structure Overview

Data in MyTardis is organised into a uniform hierarchy, which includes Experiments, Datasets and Data Files. Experiments are at the top of the hierarchy and can contain multiple Datasets. Similarly, Datasets can contain multiple Data Files. The hierarchy can be thought of like a directory structure on a typical PC (Fig. 1) in which a the Experiment directory contains multiple Dataset directories, which in turn contain multiple Data Files.

Creating Experiments

1. Navigate to the **My Data** page.
2. Click on the **Create** button to the right of the page.

The screenshot shows the 'My Data' page of MyTardis. At the top, there is a navigation bar with links: Home, About, My Data (which is highlighted in blue), Public Data, Stats, and Help. Below the navigation bar, the main content area is titled 'Experiments'. It displays a summary: '1 Experiment You Own'. Below this, there is a card for 'Test Experiment' by Peter Capaldi, which is a 'Microscopy experiment'. The card includes a 'Dataset 1' section and a note: 'Latest dataset in this experiment'. To the right of the experiment card, there is a control panel with buttons for '+ Create' (highlighted with a red box), 'Collapse all', and 'Expand all'. Below the control panel, there is a summary row: 'yesterday | 1 | 0 | Private | Download data as .tar'.

3. Fill in the ‘Create Experiment’ form. Requires at least a Title and one author.

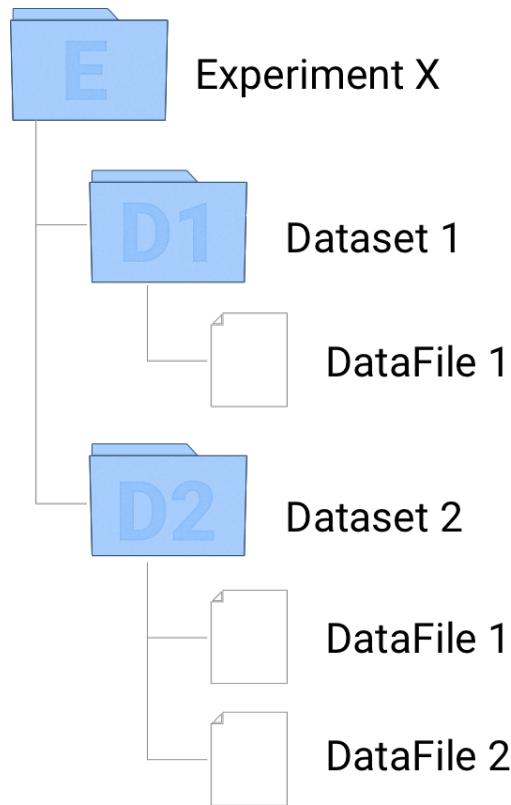

Fig. 1: Fig. 1. Data hierarchy in MyTardis

Description

Powered by [MyTardis](#)

4. Click **Save**.

Adding Datasets

Datasets always have at least one parent Experiment. To add a dataset to an Experiment:

1. Navigate to the Experiment page into which you would like to add a dataset.
2. Click the **+ Add New** button to the right of the page.

The screenshot shows the 'Test Experiment' page. At the top, there's a navigation bar with links for Home, About, My Data, Public Data, Stats, Help, and a user account dropdown for 'thedoc'. Below the navigation is the experiment title 'Test Experiment' and author 'Peter Capaldi'. The main content area displays experiment details: 'Microscopy experiment', '1 Dataset', and a note to 'Download Selected'. A search bar allows filtering datasets by description. Below this, a single dataset is listed: 'Dataset 1' (Monash University, 0 bytes, yesterday). At the bottom, there are download options (Download All, TAR, SFTP) and a note that the page is 'Powered by MyTardis'.

3. Fill in the 'Add new dataset' form. Note: The 'Description' field is actually the name of the dataset.

The screenshot shows the 'Add new dataset' form. It has three input fields: 'Description' (containing 'Dataset 1'), 'Directory' (empty), and 'Instrument' (a dropdown menu showing '-----'). Below the form is a large grey area for file attachments. At the bottom left is a blue 'Save' button. The page is 'Powered by MyTardis'.

4. Click **Save**.

Adding Data Files

Data Files can be added to a particular Dataset from the Dataset page.

1. Navigate to the Dataset into which you want to add new files.
2. Click the green **Add files...** button to the right of the page.

The screenshot shows the 'Dataset 1' page from MyTardis. At the top, there's a navigation bar with links for Home, About, My Data, Public Data, Stats, and Help. A user account 'thedocor' is shown on the right. The main content area has sections for 'Datafile Information' (with a note to click the icon for details), 'Dataset Metadata' (empty), and 'Other Experiments' (empty). On the right, there's a summary of '0 Files' with download options for TAR, SFTP, and MD5, and a green 'Add files...' button. Below that is a search bar and download selection buttons for 'All' or 'None'.

Powered by [MyTardis](#)

3. Select the files you want to add from the file selector dialog and Click **Open**. You can add multiple files by holding the “Shift” or “Ctrl” keys to select multiple files in the dialog.

Accessing Data

Download a Data File

Individual Data Files can be downloaded as follows:

1. Navigate to the Dataset containing the Data File you want to download.
2. Click the **Download** button on the Data File you want to download.

This screenshot shows the same 'Dataset 1' page as above, but with more content visible. It includes a 'Preview Images' section with a large black placeholder image and arrows for navigation, and a 'Datafile Information' section with a note to click the icon for details. The right side shows a detailed list of '4 Files' with download buttons for each file: 'cell5_deskewed.companion.ome' (292.2 KB), 'cell5_deskewed_C0_T0.ome.tif' (1.0 GB) which is highlighted with a red box, 'cell5_deskewed_C1_T0.ome.tif' (1.0 GB), and 'cell5_deskewed_C2_T0.ome.tif' (1.0 GB).

Download a Dataset

Entire Datasets can be downloaded as a tar archive.

1. Navigate to the Dataset you want to download.
2. Click the **tar** button to the right of the page.

The screenshot shows the 'Dataset 1' page on MyTardis. At the top, there's a navigation bar with links for Home, About, My Data, Public Data, Stats, Help, and a user dropdown 'thedoc'. Below the navigation is the dataset title 'Dataset 1' and a note 'From the experiment: Test Experiment'. To the right is an 'Edit Dataset Description' button. In the center, there's a preview section titled 'Preview Images' with a large black placeholder image and arrows for navigation. Below it is a file list titled '4 Files' with a 'Download Dataset' button (labeled 'TAR') highlighted in red. The file list includes four entries: 'cell5_deskewed.companion.ome' (292.2 KB), 'cell5_deskewed_C0_T0.ome.tif' (1.0 GB), 'cell5_deskewed_C1_T0.ome.tif' (1.0 GB), and 'cell5_deskewed_C2_T0.ome.tif' (1.0 GB). Each file entry has a checkbox, a download icon, and a more options icon. On the left, there's a 'Datafile Information' section with a note about viewing details and actions. On the right, there's a 'Dataset Metadata' section with a note that there is no metadata for this dataset.

Note: *tar* is an archive format like *zip* that may not be familiar to Windows users and a default Windows installation may not have the appropriate software to expand *tar* archives. We suggest that users install [7-zip](#) to expand *tar* archives from MyTardis.

Download an Experiment

Entire Experiments can be downloaded as a tar archive.

1. Navigate to the Experiment you want to download.
2. Click the **tar** button under the 'Description' section of the page.

The screenshot shows the MyTardis Experiment page for 'Test Experiment'. At the top, there's a navigation bar with links for Home, About, My Data, Public Data, Stats, Help, and a dropdown for 'thedoc'.

The main content area has a title 'Experiment' and 'Test Experiment' with a subtitle 'Peter Capaldi'. It includes a 'Create publication' and 'Edit Experiment' button. Below this, there are statistics: 1 dataset, 4 files, 3.1 GB, and a date of 5th December 2017. A 'Private' link is also present.

A search bar labeled 'Microscopy experiment' is followed by tabs for Description (selected), Metadata, Sharing, and Transfer Datasets.

Details about the experiment include:

- Institution: Monash University
- Licensing: Unspecified
- Administrators: thedoctor

Download options include 'Download All' with buttons for TAR (highlighted) and SFTP.

On the right, there's a section for '1 Dataset' with a 'Download Selected' button. It shows 'Dataset 1' with a thumbnail, file count (4), and size (3.1 GB). A search bar says 'Just start typing to filter datasets based on descriptions'.

At the bottom right, it says 'Powered by MyTardis'.

Note: *tar* is an archive format like *zip* that may not be familiar to Windows users and a default Windows installation may not have the appropriate software to expand *tar* archives. We suggest that users install [7-zip](#) to expand *tar* archives from MyTardis.

Sharing and Publishing Data

MyTardis provides 3 primary mechanisms for sharing your data:

- Sharing with another MyTardis user.
- Sharing via a temporary (obfuscated) link.
- Making data public.

Data sharing is done at the Experiment level and you can find the options to share an Experiment under the **Sharing** tab on the left side of an Experiment page.

Sharing Data with Another MyTardis User

To share an Experiment with another MyTardis user:

1. Navigate to the Experiment you want to share.
2. Click on the **Sharing** tab on the left side of the page.
3. Click the **Change User Sharing** button.

[Create New Temporary Link](#)

4. Enter the **Username** of the user with which you want to share the data.

The screenshot shows a user sharing interface. At the top, there's a header "User Sharing" with a close button. Below it, a section titled "Current User Permissions" lists "[thedoctor] (doctor@tardis.org)" with permissions: Read (green), Edit (blue), Owner (orange), Edit (yellow), and Delete (red). A sub-section titled "Add new user" contains fields for "Username" (an empty input field) and "Permissions" (a dropdown menu set to "View and Edit"). A note below states: "Owners have the ability to change access controls and share experiments with others." A blue button at the bottom left says "+ Add User".

Note: Entering the users name or email address with activate autocomplete, which helps to find the username of the user.

5. Select the permissions you'd like to give the user from the **Permissions** dropdown.
6. Click the **+Add User** button.
7. You should now see a new entry under the **Current User Permissions** section showing the user you've shared the Experiment with and the permissions you've given them.

User Sharing

Current User Permissions

Owners have the ability to change access controls and share experiments with others.

+ Add User

Sharing Data via a Temporary Link

You can also share Data in an Experiment via a temporary (obfuscated) link. Temporary links expire after 1 month or can be deleted manually. Note: temporary links are not protected (i.e., anybody with the link can access the data); however, they are obfuscated and are thus difficult to find without prior knowledge of the link.

To share an Experiment via a temporary link:

1. Navigate to the Experiment you want to share.
2. Click on the **Sharing** tab on the left of the page.
3. Click the **Create New Temporary Link** button in the links section.

Links

This experiment is private. A temporary link can be created by its owner(s) and privately shared for direct access.

Temporary access links provide full access to recipients regardless of an experiment's public status.

No tokens defined

Create New Temporary Link

4. You should now see a new entry in the **Links** section. The new entry will provide links to both the Experiment page and a direct download link. These can be copied to the clipboard using the relevant buttons. These can then be shared with collaborators using email etc.

Links

This experiment is private. A temporary link can be created by its owner(s) and privately shared for direct access.

Temporary access links provide full access to recipients regardless of an experiment's public status.

Temporary Link	Archive direct download	Expiry	Granted By	
Page link Copy to clipboard	Archive link Copy to clipboard	10th January 2018	thedoctor	Delete
Create New Temporary Link				

Publishing Data

Access to an Experiment in MyTardis is set to “private” by default and no license is attached to the data; however, MyTardis allows data from an Experiment to be made publicly available with an appropriate license. To make an Experiment publicly available:

1. Navigate to the Experiment you wish to publish and activate the **Sharing** tab to the left of the page.
2. Click the **Change Public Access** button. This will activate the Public Access dialog and display the current status of the data.
3. Select **Public** in the “Public access” dropdown menu.
4. Select an appropriate license from the list of licenses presented. In the following screenshot, a “Creative Commons Attribution” license is selected; however, your choices may be different as licenses are configured by your service provider.

Public Access

Step 1: Change Public Access:

Public access	Public	▼
---------------	--------	---

Step 2: Select a license:

Creative Commons Attribution 3.0 Australia (CC BY 3.0)

This licence lets others distribute, remix, tweak, and build upon your work, even commercially, as long as they credit you for the original creation. This is the most accommodating of licences offered under Creative Commons.

[Reselect License](#)

Step 3: Accept The Legal Agreement:

Monash University (ABN 12 377 614 012) ("University") maintains a digital repository ("Repository") in which it stores and makes available various works via the Internet or other electronic means.

By submitting material for the Repository ("Work") the person(s) submitting the Work ("Depositor") agree to the following terms and conditions:

5. Agree to the "Terms of Publishing" of your service provider.
6. Click **Confirm**

11.1.2 SFTP Access

SFTP is a secure and convenient way to access, browse and download large Experiments, Datasets and Files in MyTardis. Importantly, the SFTP interface to MyTardis is read only i.e., it is a mechanism to access data in MyTardis but does **not** allow adding data to MyTardis.

Prerequisites for accessing data via SFTP

In order to access data on MyTardis via SFTP, you will first need to install an SFTP client. There are many free and commercial SFTP clients for you to choose from; however, we recommend [Cyberduck \(Win & Mac\)](#), [FileZilla \(All platforms\)](#) or [WinSCP \(Win only\)](#) for the majority of users. The instructions here will focus on Cyberduck (Win & Mac).

Registering and managing SSH keys in MyTardis

MyTardis uses SSH key pairs to authenticate you when connecting via SFTP. Using SSH keys to authenticate is more secure and private than password-based authentication. SSH keys generally come in a pair: (1) a private part and (2) a public part. Key-based authentication typically requires you to share your public key with the service, again which you use your private key to authenticate. Never share your private key!

MyTardis provide two mechanisms for registering a public key:

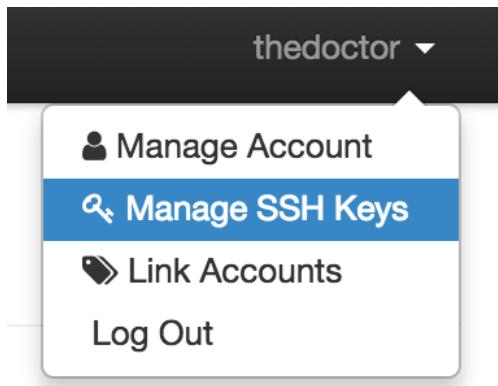

1. *Adding an existing public SSH key to MyTardis*
2. *Have MyTardis to generate an SSH key pair*

Adding an existing public SSH key to MyTardis

If you have an existing SSH keypair, you can register the public key in MyTardis. For instructions on how to create an SSH key pair, Gitlab provide some nice documentation on how to do so [here](#).

To register a public key in MyTardis:

1. Navigate to the SSH key management page using the *Manage SSH Keys* link in the user menu.

2. Click the *+ Add Key* button:

A screenshot of the "SSH Keys" management page. At the top, there is a navigation bar with links: Home, About, My Data, Public Data, Stats, and Help. Below the navigation bar, the title "SSH Keys" is displayed, followed by the sub-instruction "Add and manage your public SSH keys for accessing MyTardis via SFTP.". At the bottom of the page, there are two green buttons: "+ Add key" (which is highlighted with a pink border) and "+ Generate key". A yellow callout box contains the text "You don't have any public keys registered. Please add keys using the Add key button above.".

3. Fill in the *Add SSH Keys* form by entering a name for the key and the public key text. The public key text should be in OpenSSH format e.g., `ssh-rsa AAAAB3NzaC1yc2EAAAQABAAQDYZYnXpTP6e/BsQw+....`

FTP

Add SSH Keys

Add your own public SSH Key using the form below. **Important:** Don't add your private key.

Device Name:

Public Key:

```
ssh-rsa
AAAAAB3NzaC1yc2EAAAQABAAQDYZYnXpTP6e/BsQw+QEvdtpvdKJV2pxc9Q
DISjpqsV464bxerFs7+deNShlpJiHy7zBO4zbzGd2vE2wuxXa02tGRwKghQm3/fFRH6ZL4
pfJ/tkasYd7i5sAIKIkh0tPVVU+6HYbnbNjN+rIYh16ECrp7+YmtwPwVieeiTn69cSTkG+way
TFXwO6M3dolb/SMY8zE5JM0tVnaxBJTwNwpQZHmQW4eh87elHbv7QrtRF7ws/Ph6ME
Bpy1A9VI18ysBKMG4YxybxGuwOOMDAOI/2RhqMGV1MPXlushIOAy9vrYCeS40AukYiE
```

4. Click the *Add Key* button.

If successful you should get a new entry in the SSH keys table.

SSH Keys						
Add and manage your public SSH keys for accessing MyTardis via SFTP.						
						<input type="button" value="+ Add key"/> <input type="button" value="+ Generate key"/>
Key						
massive						<input type="button" value="Delete"/>
Type: SSH-RSA						
Fingerprint: f68edca12548c068f8836d412230bdd4						
Date added: 2018-08-07						

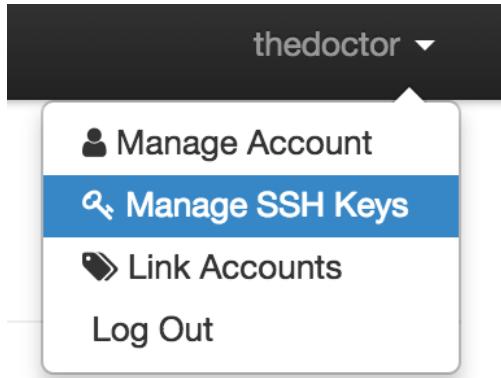

Have MyTardis to generate an SSH key pair

Creating SSH key pairs can be a bit of a challenge, particularly on Windows systems. For this reason, MyTardis provides another you another option for registering a public keys. In this case, MyTardis will generate the key pair for

you, store the public part of the key and provide you with a one time opportunity to download the private part of the key.

It is important to note that MyTardis never stores your private key. If you lose/delete it, MyTardis cannot recover it for you. This isn't really a problem, since MyTardis can always generate another key pair for you; however, you should revoke the public key associated to the lost private key in your account to ensure that no one who gains access to your private key can access your data. See [Deleting previously registered public keys in MyTardis](#).

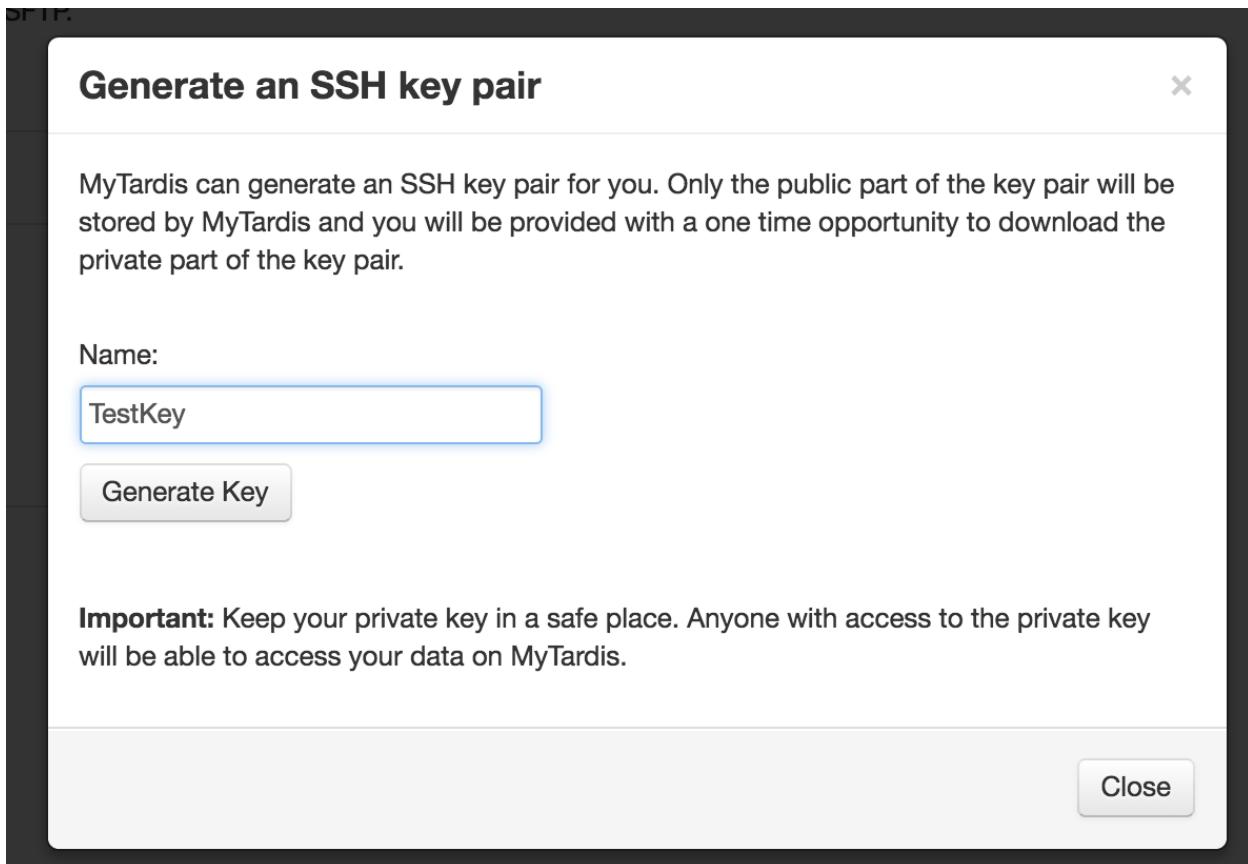

1. Navigate to the SSH key management page using the *Manage SSH Keys* link in the user menu.

2. Click the + *Generate key* button:

A screenshot of the "SSH Keys" management page. At the top, there is a navigation bar with links: MyTardis, Home, About, My Data, Public Data, Stats, and Help. Below the navigation bar, the title "SSH Keys" is displayed, followed by the sub-instruction "Add and manage your public SSH keys for accessing MyTardis via SFTP.". On the right side of the page, there are two green buttons: "+ Add key" and "+ Generate key" (the latter is highlighted with a red box). The main content area shows a table with a single row for a key named "massive". The table columns are: Key (massive), Type (SSH-RSA), Fingerprint (f68edca12548c068f8836d412230bdd4), and Date added (2018-08-07). A "Delete" button is located at the end of the table row.

3. Give the key a name and click the *Generate & Download* button. The server will generate an SSH key pair, register the public key and trigger your browser to download the private key.

4. The SSH keys table will be updated with your newly registered public key.

MyTardis Home About My Data Public Data Stats Help

+ Add key **+ Generate key**

Deleting previously registered public keys in MyTardis

Removing a previously registered public SSH key from MyTardis is straightforward.

1. Navigate to the SSH key management page using the *Manage SSH Keys* link in the user menu.

2. Click the *Delete* button on the key you wish to remove.

A screenshot of the "SSH Keys" management page. At the top, there's a navigation bar with "MyTardis" and links for "Home", "About", "My Data", "Public Data", "Stats", and "Help". Below that is a section titled "SSH Keys" with the sub-instruction "Add and manage your public SSH keys for accessing MyTardis via SFTP.". There are two entries in the list:

- massive**: Type: SSH-RSA, Fingerprint: f68edca12548c068f8836d412230bdd4, Date added: 2018-08-08. It has a "Delete" button to its right.
- TestKey**: Type: SSH-RSA, Fingerprint: e27936d5ccac5b7e5af83cefb29f01f0, Date added: 2018-08-09. It has a "Delete" button to its right, which is highlighted with a pink border.

At the bottom of the page are two green buttons: "+ Add key" and "+ Generate key".

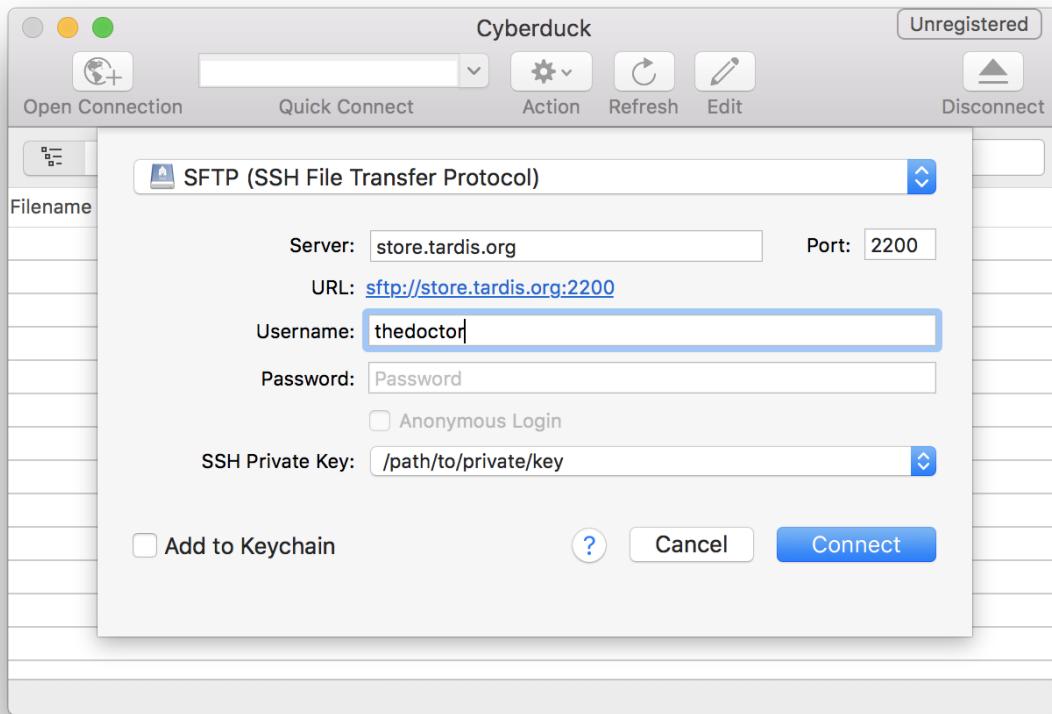

Attempting to connect to MyTardis via SFTP using the private sister key to the deleted key will no longer work.

Connecting to MyTardis via SFTP

1. Open your SFTP client and create a new connection with the following configuration:

Parameter	Value
Server:	<i>URL for your MyTardis deployment e.g. https://store.erc.monash.edu</i>
Port:	<i>Port on which SFTP server is running</i>
Username:	<i>Your MyTardis username</i>
Password:	<i>Leave this blank</i>
SSH Private Key	<i>Path to a private SSH key¹</i>

Note: substitute your credentials and details for your MyTardis deployment for the *italicised* values. If you are unsure about any of these value, please contact your system admin should be able to provide these to you.

2. Click Connect

3. Upon successful connection you will be presented with a file browser showing all your data on MyTardis.

Data is organised according to the Experiment/Dataset/Data File hierarchy/structure described in the *Organising Data* section.

Browse and/or Download a Specific Experiment or Dataset

MyTardis also provides a convenient way to access/browse a particular Experiment or Dataset via SFTP.

1. Navigate to the Experiment or Dataset page that you want to access via SFTP using your web browser.
2. There is an **SFTP** button in the *Download* section on both the Experiment and Dataset views.

¹ You must register the public key in MyTardis first, see [Registering and managing SSH keys in MyTardis](#)

11.2 Configuration and Administration

11.2.1 Installation

The sections through to Extended Configuration below provide a Quick Start guide for getting a basic MyTardis installation up and running. The following section provides additional information on advanced configuration and add-on capabilities of MyTardis.

Prerequisites

Ubuntu (18.04 LTS is recommended)

Run the script:

```
sudo bash install-ubuntu-requirements.sh
```

It will install required packages with this command:

```
# for Ubuntu 16.04 or 18.04
# sudo bash install-ubuntu-requirements.sh

apt-get update
apt-get install git libldap2-dev libmagickwand-dev libsasl2-dev \
    libssl-dev libxml2-dev libxslt1-dev libmagic-dev curl gnupg \
    python-dev python-pip python-virtualenv virtualenvwrapper \
    zlib1g-dev libfreetype6-dev libjpeg-dev

curl -sL https://deb.nodesource.com/setup_10.x | sudo -E bash -
sudo apt-get install -y nodejs
```

Download

To get the most recent stable release:

```
git clone -b master https://github.com/mytardis/mytardis.git
cd mytardis
```

This clones the repository as read-only.

Or, to get the current development branch:

```
git clone -b develop git://github.com/mytardis/mytardis.git
cd mytardis
```

Quick configuration

It is recommended that you use a virtualenv. The list of packages above includes the `virtualenvwrapper` toolkit. Set up your environment with these commands:

Ubuntu 18.04:

```
source /etc/bash_completion.d/virtualenvwrapper
```

For Ubuntu 16.04:

```
source /usr/share/virtualenvwrapper/virtualenvwrapper.sh
```

Then create the `mytardis` virtual environment

```
mkvirtualenv mytardis
pip install -U pip
```

Note: the next time you want to work with this virtualenv, run the appropriate `source` command and then use the command: `workon mytardis`

MyTardis dependencies are then installed with `pip`:

```
pip install -U -r requirements.txt
```

To install minimal Javascript dependencies for production:

```
npm install --production
```

To install Javascript dependencies for production and for testing:

```
npm install && npm test
```

Configuring MyTardis is done through a standard Django `settings.py` file. MyTardis comes with a set of default settings in its `tardis/default_settings/` package. You can import this as the basis of your own config file - options defined here will override the relevant options in `default_settings/*.py`.

Create a new file `tardis/settings.py` containing the following:

```
from .default_settings import *
# Add site specific changes here.
```

(continues on next page)

(continued from previous page)

```
# Turn on django debug mode.
DEBUG = True

# Use the built-in SQLite database for testing.
# The database needs to be named something other than "tardis" to avoid
# a conflict with a directory of the same name.
DATABASES['default']['ENGINE'] = 'django.db.backends.sqlite3'
DATABASES['default']['NAME'] = 'tardis_db'
```

In addition you will need to create a new SECRET_KEY for your installation. This is important for security reasons.

A convenient method is to run the following command in your mytardis installation location:

```
python -c "import os; from random import choice; key_line = '%sSECRET_KEY=%s' % (\n    #_generated from build.sh\n    'from .default_settings import * \n\n' if not os.path.\n    isfile('tardis/settings.py') else '', ''.join([choice(\n        'abcdefghijklmnopqrstuvwxyz0123456789@#$%^&*(-_=+)') for i in range(50)])); f=open(\n    'tardis/settings.py', 'a+'); f.write(key_line); f.close()"
```

This is the minimum set of changes required to successfully run the server in development mode. You can make any other site-specific changes as necessary.

Initialisation

Create and configure the database:

```
python manage.py migrate
python manage.py createcachetable default_cache
python manage.py createcachetable celery_lock_cache
```

This avoids creating a superuser before the MyTardis specific UserProfile table has been created. More information about the migrate commands can be found at [Configuration and Administration](#).

Next, create a superuser:

```
python manage.py createsuperuser
```

MyTardis can now be executed in its simplest form using:

```
python manage.py runserver
```

This will start the Django web server at <http://localhost:8000/>.

Extended configuration

See below for some extra configuration options that are specific to MyTardis.

An automatically generated documentation of the settings can be found in [tardis package](#).

Essential Production Settings

These settings are essential if you want to run MyTardis in production mode (DEBUG = False).

SECRET_KEY

This key needs to be unique per installation and, as the name implies, be kept secret.

A new one can be conveniently generated with the command:

```
echo "SECRET_KEY='`python manage.py generate_secret_key`'" >> tardis/settings.py
```

However, the more complex command shown above needs to be used at installation time.

ALLOWED_HOSTS

`ALLOWED_HOSTS` is a list of hostnames and/or IP addresses under which the server is accessible. If this is not set you will get a 500 Error for any request.

Database**tardis.default_settings.DATABASE_ENGINE**

The database server engine that will be used to store the MyTardis metadata, possible values are *postgresql*, *psycopg2*, *postgresql*, *mysql*, *sqlite3* or *oracle*.

tardis.default_settings.DATABASE_NAME

The name of the database to used to store the data, this is the path to the database if you are using the SQLite storage engine.

tardis.default_settings.DATABASE_USER

The user name used to authenticate to the database. If you are using SQLite this field is not used.

tardis.default_settings.DATABASE_PASSWORD

The password used to authenticate to the database. If you are using SQLite this field is not used.

tardis.default_settings.DATABASE_HOST

The host name of the machine hosting the database service. If this is empty then localhost will be used. If you are using SQLite then this field is ignored.

tardis.default_settings.DATABASE_PORT

The port the database is running on. If this is empty then the default port for the database engine will be used. If you are using SQLite then this field is ignored.

LDAP

For further information see [LDAP authentication](#)

Repository**tardis.default_settings.DEFAULT_STORAGE_BASE_DIR**

The path to the default MyTardis storage location. This is where files will be stored to if you do not provide any other location explicitly through “StorageBox”es.

tardis.default_settings.REQUIRE_DATAFILE_CHECKSUMS

If True, a Datafile requires an MD5 or SHA-512 checksum from the time it is first recorded in the MyTardis database. This enables a model-level constraint check each time a Datafile record is saved. Defaults to True. Datafile record is saved.

tardis.default_settings.REQUIRE_DATAFILE_SIZES

If True, a Datafile require a size from the time it is first recorded in the MyTardis database. This enables a model-level constraint check each time a Datafile record is saved. Defaults to True.

tardis.default_settings.REQUIRE_VALIDATION_ON_INGESTION

If True, ingestion of a Datafile is only permitted if the Datafile matches its supplied size and/or checksums. Defaults to True.

Access Rights & Licensing

Licences

By default, no licences are loaded. A user can make metadata public without assigning a licence, but they cannot allow public access to their data.

Creative Commons licences (for Australia) are available in tardis/tardis_portal/fixtures/cc_licenses.json. You can load them with python manage.py loaddata.

You can use the admin interface to add other licences. Please ensure allows_distribution is set to the correct value to ensure the licence appears in conjunction with suitable public access types.

Legal Notice

When changing the public access rights or licence for an experiment, a legal notice is displayed. You can override it by either:

1. creating a new app (probably your site theme) and putting your legal text in tardis/apps/<app_name>/static/publishing_legal.txt, or
2. directly making changes to tardis/tardis_portal/static/publishing_legal.txt.

Filters

tardis.default_settings.POST_SAVE_FILTERS

This contains a list of post save filters that are execute when a new data file is created.

The POST_SAVE_FILTERS variable is specified like:

```
POST_SAVE_FILTERS = [
    ("tardis.tardis_portal.filters.exif.EXIFFilter", ["EXIF", "http://exif.schema"
    ↵"]),
]
```

For further details please see the [Filter Setup](#) section.

Archive Organizations

tardis.default_settings.DEFAULT_ARCHIVE_FORMATS.

This is a prioritized list of download archive formats to be used in contexts where only one choice is offered to the user; e.g. the “download selected” buttons. (The list allows for using different archive formats depending on the user’s platform.)

tardis.default_settings.DEFAULT_PATH_MAPPER.

This gives the default archive “organization” to be used. Organizations are defined via the next attribute.

tardis.default_settings.DOWNLOAD_PATH_MAPPERS.

This is a hash that maps archive organization names to Datafile filename mapper functions. These functions

are responsible for generating the archive pathnames used for files written to “tar” and “zip” archives by the downloads module.

The `DOWNLOAD_PATH_MAPPERS` variable is specified like:

```
DOWNLOAD_PATH_MAPPERS = {
    'test': ('tardis.apps.example.ExampleMapper',),
    'test2': ('tardis.apps.example.ExampleMapper', {'foo': 1})
}
```

The key for each entry is the logical name for the organization, and the value is a tuple consisting of the function’s pathname and a set of optional keyword arguments to be passed to the function. At runtime, the function is called with each Datafile as a positional argument, and an additional ‘rootdir’ keyword argument. The function should compute and return a (unique) pathname based on the Datafile and associated objects. If the function returns `None`, this tells the archive builder to leave out the file.

By default, the archive builder uses the built-in “deep-storage” mapper which gives pathnames that try to use directory information to rebuild a file tree.

Storage Locations (`StorageBox` es)

A MyTardis instance can be configured to support multiple locations (`StorageBox` es) for storing data files. Each location holds copies (`DataFileObject` s) of `DataFile` s that are recorded in the MyTardis database.

The `StorageBox` architecture is compatible with the [Django File Storage API](#). This makes it relatively easy to support a number of different storage backends such as cloud storage or SFTP servers. Please refer to the [*StorageBox documentation*](#) for more detailed information.

Single Search

Instructions on installing and configuring Elasticsearch for advanced search are available from [*Setting Up Search*](#).

Additional Tabs

Additional and custom tabs may be configured in MyTardis on a per-installation basis. The tabs are implemented as separate Django applications with a single view (index), listed in the `TARDIS_APPS` configuration item and either linked to, or installed in the `TARDIS_APP_ROOT` directory, by default `tardis/apps`.

Documentation on the additional tabs is available from [*Apps and Contextual Views*](#).

Additional Views

Custom views may be configured in MyTardis on a per-installation basis. The tabs are implemented as separate Django applications with a single view function listed in the `*_VIEWS` configuration item and added to the `INSTALLED_APPS` list.

Refer to the [*views documentation*](#) for further information.

Site Customisations

Some settings that allow customised messages and styles.

```
PUBLICATION_INTRODUCTION = """
<p><strong>... introduction and publication agreement ...</strong></p>
"""

SITE_STYLES = '' # should be CSS

# if either GA setting is empty, GA is disabled
GOOGLE_ANALYTICS_ID = '' # whatever Google provides
GOOGLE_ANALYTICS_HOST = '' # the host registered with Google

# these refer to any template finder findable location, e.g. APPDIR/templates/...
CUSTOM_ABOUT_SECTION_TEMPLATE = 'tardis_portal/about_include.html'
CUSTOM_USER_GUIDE = 'user_guide/index.html'
```

Deployment

Collecting Static Files

For performance reasons you should avoid static files being served via the application, and instead serve them directly through the webserver.

To collect all the static files to a single directory:

```
python manage.py collectstatic
```

tardis.default_settings.**STATIC_ROOT**

This contains the location to deposit static content for serving.

tardis.default_settings.**STATIC_URL**

The path static content will be served from. (eg. /static or http://mytardis-resources.example.com/)

See also:

collectstatic, STATIC_ROOT, STATIC_URL

Serving with Nginx + Gunicorn

In this configuration, Nginx serves static files and proxies application requests to a Gunicorn server:

Nginx should then be configured to send requests to the server. Here is an example configuration (SSL part from Mozilla SSL configurator). Please amend for your own needs and understand the settings before deploying it.:

```
upstream mytardis {
    server unix:/var/run/gunicorn/mytardis/socket;
    server 127.0.0.1:8000 backup;
}
server {
    listen 80 default_server;
    server_name demo.mytardis.org;
    return 301 https://$server_name$request_uri;
```

(continues on next page)

(continued from previous page)

```

}

server {
    listen 443 default_server ssl;
    server_name demo.mytardis.org;

    # certs sent to the client in SERVER HELLO are concatenated in ssl_certificate
    ssl_certificate /path/to/signed_cert_plus_intermediates;
    ssl_certificate_key /path/to/private_key;
    ssl_session_timeout 5m;
    ssl_session_cache shared:SSL:50m;

    # Diffie-Hellman parameter for DHE ciphersuites, recommended 2048 bits
    ssl_dhparam /path/to/dhparam.pem;

    # intermediate configuration. tweak to your needs.
    ssl_protocols TLSv1.1 TLSv1.2;
    ssl_ciphers 'ECDHE-RSA-AES128-GCM-SHA256:ECDHE-ECDSA-AES128-GCM-SHA256:ECDHE-RSA-
    ↵AES256-GCM-SHA384:ECDHE-ECDSA-AES256-GCM-SHA384:DHE-RSA-AES128-GCM-SHA256:DHE-DSS-
    ↵AES128-GCM-SHA256:kEDH+AESGCM:ECDHE-RSA-AES128-SHA256:ECDHE-ECDSA-AES128-
    ↵SHA256:ECDHE-RSA-AES128-SHA:ECDHE-ECDSA-AES128-SHA:ECDHE-RSA-AES256-SHA384:ECDHE-
    ↵ECDSA-AES256-SHA384:ECDHE-RSA-AES256-SHA:ECDHE-ECDSA-AES256-SHA:DHE-RSA-AES128-
    ↵SHA256:DHE-RSA-AES128-SHA:DHE-DSS-AES128-SHA256:DHE-RSA-AES256-SHA256:DHE-DSS-
    ↵AES256-SHA:DHE-RSA-AES256-SHA:DES-CBC3-SHA:!aNULL:!eNULL:!EXPORT:!DES:!RC4:!MD5:!
    ↵PSK:!aECDH:!EDH-DSS-DES-CBC3-SHA:!EDH-RSA-DES-CBC3-SHA:!KRB5-DES-CBC3-SHA';
    ssl_prefer_server_ciphers on;

    # HSTS (ngx_http_headers_module is required) (15768000 seconds = 6 months)
    add_header Strict-Transport-Security max-age=15768000;

    # OCSP Stapling ---
    # fetch OCSP records from URL in ssl_certificate and cache them
    ssl_stapling on;
    ssl_stapling_verify on;

    ## verify chain of trust of OCSP response using Root CA and Intermediate certs
    ssl_trusted_certificate /path/to/root_CA_cert_plus_intermediates;

    resolver <IP DNS resolver>;

    client_max_body_size 4G;
    keepalive_timeout 5;

    gzip off; # security reasons
    gzip_proxied any;
    # MyTardis generates uncompressed archives, so compress them in transit
    gzip_types application/x-javascript text/css;
    gzip_min_length 1024;
    gzip_vary on;

    location / {
        proxy_set_header X-Forwarded-For $proxy_add_x_forwarded_for;
        proxy_set_header X-Forwarded-Proto $scheme;
        proxy_set_header Host $http_host;
        proxy_redirect off;
        proxy_pass http://mytardis;
        client_max_body_size 4G;
    }
}

```

(continues on next page)

(continued from previous page)

```
    client_body_buffer_size 8192k;
    proxy_connect_timeout 2000;
    proxy_send_timeout 2000;
    proxy_read_timeout 2000;
}

location /static/ {
    expires 7d;
    alias /srv/static_files/;
}
}
```

The X-Forwarded-Proto header is explained in <http://docs.gunicorn.org/en/stable/deploy.html#id5>:

It is recommended to pass protocol information to Gunicorn. Many web frameworks use this information to generate URLs. Without this information, the application may mistakenly generate ‘http’ URLs in ‘https’ responses, leading to mixed content warnings or broken applications.

To tell MyTardis to set this header in its HTTP requests and redirects, you’ll need the following in your settings.py:

```
SECURE_PROXY_SSL_HEADER = ('HTTP_X_FORWARDED_PROTO', 'https')
```

For more information, including warnings on the risks of misconfiguring this setting, see: <https://docs.djangoproject.com/en/1.11/ref/settings/#secure-proxy-ssl-header>

Don’t forget to create the static files directory and give it appropriate permissions. The location is set in the settings.py file.

```
# Collect static files to ``settings.STATIC_ROOT``
python manage.py collectstatic
# Allow Nginx read permissions
setfacl -R -m user:nginx:rx static_dir
```

[Django with Gunicorn](#)

Serving with Apache HTTPD + mod_wsgi

We do not support the use of Apache. If you need this and want to support this use case, we welcome your contribution of any relevant documentation.

Creating Systemd Services for Gunicorn and Celery

Gunicorn is a Python WSGI HTTP Server which is suitable for production (when combined with NGINX). Gunicorn is typically run from a Systemd service (on Ubuntu 16.04 or Ubuntu 18.04), saved in `/etc/systemd/system/gunicorn.service`:

```
[Unit]
Description=gunicorn daemon
After=network.target

[Service]
```

(continues on next page)

(continued from previous page)

```
User=mytardis
Group=mytardis
WorkingDirectory=/home/mytardis/mytardis
ExecStart=/home/mytardis/.virtualenvs/mytardis/bin/gunicorn \
    -c gunicorn_settings.py -b unix:/tmp/gunicorn.socket \
    -b 127.0.0.1:8000 \
    --log-syslog \
    wsgi:application

[Install]
WantedBy=multi-user.target
```

On older systems (Ubuntu 14.04), Supervisor can be used instead of Systemd. In this case, the Gunicorn service would be configured in */etc/supervisor/conf.d/gunicorn.conf*:

```
[program:gunicorn]
command=/home/mytardis/.virtualenvs/mytardis/bin/gunicorn
-c /home/mytardis/mytardis/gunicorn_settings.py
-b unix:/tmp/gunicorn.socket
-b 127.0.0.1:8000
--log-syslog
wsgi:application
user=mytardis
stdout_logfile=/var/log/gunicorn.log
redirect_stderr=true
```

A single server MyTardis deployment requires only one Gunicorn service, but MyTardis can be installed on multiple web nodes, each running NGINX and Gunicorn to accomodate load balancing and high availability using HAProxy.

The Celery workers which run MyTardis asynchronous tasks also require a service configuration, which is typically implemented with Systemd (on Ubuntu 16.04 or Ubuntu 18.04), saved in */etc/systemd/system/celeryworker.service*:

```
[Unit]
Description=celeryworker daemon
After=network.target

[Service]
User=mytardis
Group=mytardis
WorkingDirectory=/home/mytardis/mytardis
Environment=DJANGO_SETTINGS_MODULE=tardis.settings
ExecStart=/home/mytardis/.virtualenvs/mytardis/bin/celery worker \
    -A tardis.celery.tardis_app \
    -c 2 -Q celery,default -n "allqueues.%@h"

[Install]
WantedBy=multi-user.target
```

On older systems (Ubuntu 14.04), Supervisor can be used instead of Systemd. In this case, the Celery worker service would be configured in */etc/supervisor/conf.d/celeryworker.conf*:

```
[program:celeryd]
environment=
DJANGO_SETTINGS_MODULE=tardis.settings
command=/home/mytardis/.virtualenvs/mytardis/bin/celery worker
-A tardis.celery.tardis_app
-c 2 -Q celery,default -n "allqueues.%@h"
```

(continues on next page)

(continued from previous page)

```
user=mytardis
directory=/home/mytardis/mytardis
stdout_logfile=/var/log/celeryd.log
redirect_stderr=true
killasgroup=true
stopwaitsecs=600
```

For tasks scheduled by Celerybeat, the Systemd service configuration (for Ubuntu 16.04 or Ubuntu 18.04), is saved in `/etc/systemd/system/celerybeat.service`:

```
[Unit]
Description=celerybeat daemon
After=network.target

[Service]
User=mytardis
Group=mytardis
WorkingDirectory=/home/mytardis/mytardis
Environment=DJANGO_SETTINGS_MODULE=tardis.settings
ExecStart=/home/mytardis/.virtualenvs/mytardis/bin/celery beat \
-A tardis.celery.tardis_app --loglevel INFO

[Install]
WantedBy=multi-user.target
```

On older systems (Ubuntu 14.04), Supervisor can be used instead of Systemd. In this case, the Celerybeat service would be configured in `/etc/supervisor/conf.d/celerybeat.conf`:

```
[program:celerybeat]
environment=
    DJANGO_SETTINGS_MODULE=tardis.settings
command=/home/mytardis/.virtualenvs/mytardis/bin/celery beat
    -A tardis.celery.tardis_app --loglevel INFO
user=mytardis
directory=/home/mytardis/mytardis
stdout_logfile=/var/log/celerybeat.log
redirect_stderr=true
```

11.2.2 Authentication Methods

Users

MyTardis supports several sources of authentication and identity, referred to as user providers.

In the `settings.py` user providers are activated by specifying them within the **USER_PROVIDERS** variable:

```
USER_PROVIDERS = ('tardis.tardis_portal.auth.localdb_auth.DjangoAuthProvider',)
```

Groups

MyTardis also supports several sources for group membership information, referred to as group providers.

In the `settings.py` group providers are activated by specifying them within the **GROUP_PROVIDERS** variable:

```
GROUP_PROVIDERS = ('tardis.tardis_portal.auth.localdb_auth.DjangoGroupProvider',
                   'tardis.tardis_portal.auth.vbl_auth.VblGroupProvider',)
```

Included Auth Plugins

HTTP Basic Endpoint Authentication

```
tardis.tardis_portal.auth.httpbasicendpoint_auth
```

HTTP Basic Endpoint authentication uses access to a HTTP resource (or endpoint) to determine if authentication should be allowed.

To use HTTP Basic Endpoint authentication, you'll need a HTTP resource protected by HTTP Basic Auth which is accessible from the MyTardis server.

In the *settings.py* add the following to *AUTH_PROVIDERS* with an appropriate name. eg.

```
AUTH_PROVIDERS = (
    ('acls', 'acls', 'tardis.tardis_portal.auth.httpbasicendpoint_auth.
    ↪HttpBasicEndpointAuth'),
)
```

On each request, MyTardis will attempt to use basic authentication with the provided credentials to access the HTTP resource. If it fails, access is denied.

Endpoint to use in HTTP Basic Endpoint Auth. eg.

```
HTTP_BASIC_AUTH_ENDPOINT = 'https://test.example/endpoint'
```

LDAP Authentication

```
tardis.tardis_portal.auth.ldap_auth
```

To enable LDAP you'll need to specify which components of the LDAP authentication backend are enabled. In the *settings.py* add the following to either Authentication, User Provider, Group Provider slugs.:

```
'tardis.tardis_portal.auth.ldap_auth.ldap_auth'
```

This is a wrapper function that allows initialisation of the LDAP provider using *settings.py* values.

`ldap_auth()` Function

The following are configuration settings that are used when initialising the LDAP backend.

`tardis.default_settings.LDAP_TLS`

Enable TLS connections.

`tardis.default_settings.LDAP_URL`

Set the URL of the LDAP server, e.g. `ldap://localhost:389/`

`tardis.default_settings.LDAP_USER_LOGIN_ATTR`

Set the login attribute of the users, usually this will be either `cn` or `uid`

`tardis.default_settings.LDAP_USER_ATTR_MAP`

The LDAP user attribute map is used to map internal identifiers like `first_name`, `last_name` and `email` to their LDAP equivalents e.g. `{"givenName": "first_name", "sn": "last_name", "mail": "email"}`

`tardis.default_settings.LDAP_GROUP_ID_ATTR`

This is where you specify the group identifier from LDAP, usually it will be `cn`.

`tardis.default_settings.LDAP_GROUP_ATTR_MAP`

This map is used to map internal identifiers like `display` e.g. `{"description": "display"}`

`tardis.default_settings.LDAP_BASE`

Sets the search base of the LDAP queries `dc=example, dc=com`

`tardis.default_settings.LDAP_USER_BASE`

Sets the suffix to append to the user RDN (e.g. `uid=jsmith`) to construct the DN e.g. `"ou=People, " + LDAP_BASE`

`tardis.default_settings.LDAP_GROUP_BASE`

Sets the suffix to append to the group RDN (e.g. `cn=group1`) to construct the DN e.g. `"ou=Group, " + LDAP_BASE`

Temporary Token Authentication

`tardis.tardis_portal.auth.token_auth`

To use token authentication, you'll need to specify the following `settings.py`

`'tardis.tardis_portal.auth.token_auth.TokenGroupProvider',`

`TOKEN_EXPIRY_DAYS = 30`

`TOKEN_LENGTH = 30`

`TOKEN_USERNAME = 'tokenuser'`

and create a user with

`bin/django createtokenuser`

Cleaning up

`bin/django cleanuptokens`

It is recommended that you schedule regular purging of expired tokens. Set a cronjob to run `bin/django cleanuptokens`

Expiry

Token auth works by hijacking the group provider system.

MyTardis groups are calculated and cached when a user logs in.

This means that if a session is active, and a token becomes valid (either through deletion or expiry) that access will still be granted. To mitigate this, when a token user logs in, an explicit expiry is set on their session - the earlier of 4am the next day, or the session expiry date (the end of the day)

This forces the user to attempt to log in again, and be denied access.

- `tardis.tardis_portal.auth.ip_auth`

The `tardis.tardis_portal.auth package` module contains the authentication specific code.

11.2.3 Filter Setup

filters

Filters are called once an object has been saved to the database. They build on the [Django Signals Infrastructure](#).

In the `settings.py` file filters are activated by specifying them within the `POST_SAVE_FILTERS` variable, for example

```
POST_SAVE_FILTERS = [
    ("tardis.tardis_portal.filters.exif.EXIFFilter",
     ["EXIF", "http://exif.schema"]),
]
```

The format they are specified in is

```
(<filter class path>, [args], {kwargs})
```

Where `args` and `kwargs` are both optional.

11.2.4 Database

Initialising

When creating a new database the `migrate` command will need to be called to initialise the schema and insert the initial data fixtures.

Usage

```
python manage.py migrate
```

Migrating

Some of the upgrades to MyTardis will require that the database schema be upgraded to match the internal data model. The `migrate` command migrates data from old database schemas to the current one. It detects which version of the database you are currently running and will automatically migrate to the current version.

In certain cases it is also necessary to update the permissions table.

Usage

```
python manage.py migrate
```

If the model changes require it, run:

```
python manage.py update_permissions
```

creating superuser

After success of database initialization or migration, please use a command line utility called `createsuperuser` to create an administrator account using the admin site which is hooked to the URL `/admin/`.

Usage

```
python manage.py createsuperuser
```

Backup

Previous versions of MyTardis included a `backupdb` management command but it has been removed in 4.0. Please use the recommended backup tool for your database engine, e.g. `pg_dump` or `mysqldump`.

11.2.5 Schema and Parameter Sets

MyTardis stores metadata as *Parameters*, which are grouped in to *Parameter Sets*, which are defined by a *Schema*.

Managing Schema

Schemas are managed through the Django administrative interface. The administrative interface is normally accessible from a link similar to:

```
http://domain.com:8000/admin/
```

Selecting “Schemas” in the administrative interface will display a list of the installed schemas. Clicking on a schema displays the editor for that schema.

Schema definitions are the combination of two tables, *Schema* and *ParameterName*.

The *Schema* fields are:

Namespace The namespace uniquely identifies the schema. When exporting an experiment as a METS file the namespace is used as an XML Namespace, and thus must follow the XML standard, i.e. in the form of a URL.

The MyTardis naming convention is:

```
http://domain.com/localidentifiers/schemaname/version
```

Name The display name of the schema.

Type Experiment, Dataset or Datafile.

Subtype Used to group and identify schema for forms based searching.

The *ParameterName* fields are:

Schema The namespace of the schema which this parameter belongs to.

Name The identifier used to ingest parameters.

Full Name The display name of the parameter.

Units The display name of the units for numerical values.

Data Type One of:

- Numeric
- String
- Longstring
- URL

- Filename
- Datetime
- Link

Strings use the input field widget for editing, while longstrings use a textarea widget.

Immutable If true, no user editing of the parameter is allowed, regardless of access.

Comparison Type The type of search to be performed with Forms Based Search. Not used by Advanced Search.

Is Searchable Flag whether this parameter is searchable.

Choices If defined, a drop down list of values is displayed.

Order The display order of the parameters within the schema. Sorting is by Order, then alphabetically.

11.2.6 Setting Up Search

Tardis comes with a single search option which provides users with a search field that returns a list of matching Experiments, Datasets and Datafiles.

The single search box uses Elasticsearch, with a django-haystack frontend, and accordingly requires some setup. The single search box is disabled by default.

Setting up Elasticsearch

Elasticsearch doesn't work out of the box with MyTardis. It is not currently installed with pip and requires a number of manual steps to get working.

Elasticsearch can be found here: <https://www.elastic.co/products/elasticsearch>

The following are a very simple list of steps that will get everything up and running. It is advisable to follow up with the person responsible for overseeing security policy at your home institution to see if any extra setup is necessary.

Django Configuration

Enabling Single Search

A list of default settings for Single Search are already in `default_settings.py` in the MyTardis repository. Single search is enabled by setting the `SINGLE_SEARCH_ENABLED` option to True.

Other settings are shown below:

HAYSTACK_CONNECTIONS

The default value is

```
HAYSTACK_CONNECTIONS = {
    'default': {
        'ENGINE': 'haystack.backends.elasticsearch_backend.'
                  'ElasticsearchSearchEngine',
        'URL': 'http://127.0.0.1:9200/',
        'INDEX_NAME': 'haystack',
    },
}
```

HAYSTACK_SIGNAL_PROCESSOR

This setting determines when the information in Elasticsearch is updated. The default value updates it in real time with db changes

```
HAYSTACK_SIGNAL_PROCESSOR = 'haystack.signals.RealtimeSignalProcessor'
```

A more performant implementation would trigger an update task on each db change.

Please see django-haystack documentation for further information: <http://haystacksearch.org>

Updating Indexes

Once Elasticsearch is set up, and Single Search is enabled (i.e. the SINGLE_SEARCH_ENABLED option in settings is set to True) Haystack will automatically register the addition of and changes to models and reflect these in the search index. That is, as soon as a new instance of a model is added to the database, or changes are made to an existing instance, these changes will be searchable.

If you're adding search to an existing deployment of Django then you'll need to manually trigger a rebuild of the indexes (automatic indexing only happens through signals when models are added or changed).

Haystack registers a number of management commands with the Django framework, the important one here being the *rebuild_index* command. To rebuild, navigate to your checkout and call the following command

```
python manage.py rebuild_index
```

Haystack will then ask you to confirm your decision (Note: Rebuilding will destroy your existing indexes, and will take a while for large datasets, so be sure), and then start rebuilding.

11.2.7 Storage Options and Architecture in MyTardis

Database layout for storage

The storage for each DataFile is configured individually. A “way to store data” is called StorageBox. Each file has one or many related DataFileObjects, which link a DataFile with a StorageBox. A DataFile can have several copies stored in different StorageBoxes via several DataFileObjects.

StorageBoxes

StorageBoxes contain all the information needed to store a file except an id unique to the file and storagebox.

Each StorageBox points to a class that implements the Django storage API via a python module path as string.

Optional instantiation parameters for each StorageBox can be stored in StorageBoxOptions. These are used as parameters to the storage class set in the django_storage_class attribute of a StorageBox

These parameters are string types by default. However, by setting the optional parameter value_type to ‘pickle’, any pickleable object can be stored here and hence used for instantiation of the storage class.

Optional classification and other metadata can be stored in StorageBoxAttributes.

A special case is where someone registers a file and wants to put it into location themselves but needs to be given the place to put it (via the API). Such situation can only be resolved with StorageBoxes that implement the “build_save_location” function. Such StorageBoxes need to have a StorageBoxAttribute with key “staging” and value “True”.

DataFiles

DataFiles are the logical representation of the file. They contain information about the name, size, checksum, dates etc.

DataFileObjects

DataFileObjects point to the DataFile they belong to and the StorageBox they reside in. They also have an identifier that the StorageBox uses to find the actual file. DataFileObjects also have a date, and a state-flag.

Available backends

Django storage API compatible backends are available for example at <https://github.com/jschneier/django-storages>

We have tested the following backends with MyTardis:

- File on disk or any other system mounted storage
- SFTP
- SWIFT Object Storage

Documented backends

S3 compatible storage

S3 and S3 compatible storage backends are supported by the django-storages package.

We added some modifications that allow database driven configuration. Until these changes are accepted by the maintainer, use this fork and branch: <https://github.com/monash-merc/django-storages/tree/mytardis-branch>

Install it with:

```
pip install -e git+https://github.com/monash-merc/django-storages.git@mytardis-branch  
    ↵#egg=django-storages
```

Configuration

The following options can be set as StorageBoxOption on your S3 storage box or system wide in your Django settings (a default of * labels mandatory settings):

StorageBoxOption	Django Setting	Default
access_key	AWS_S3_ACCESS_KEY_ID	*
	AWS_ACCESS_KEY_ID	
secret_key	AWS_S3_SECRET_ACCESS_KEY	
	AWS_SECRET_ACCESS_KEY	
file_overwrite	AWS_S3_FILE_OVERWRITE	True
headers	AWS_HEADERS	{}
bucket_name	AWS_STORAGE_BUCKET_NAME	
auto_create_bucket	AWS_AUTO_CREATE_BUCKET	False
default_acl	AWS_DEFAULT_ACL	public-read
bucket_acl	AWS_BUCKET_ACL	default_acl
querystring_auth	AWS_QUERYSTRING_AUTH	True
querystring_expire	AWS_QUERYSTRING_EXPIRE	600
reduced_redundancy	AWS_REDUCED_REDUNDANCY	
location	AWS_LOCATION	''
encryption	AWS_S3_ENCRYPTION	False
custom_domain	AWS_S3_CUSTOM_DOMAIN	None
calling_format	AWS_S3_CALLING_FORMAT	SubdomainCallingFormat()
secure_urls	AWS_S3_SECURE_URLS	True
file_name_charset	AWS_S3_FILE_NAME_CHARSET	SET8
gzip	AWS_IS_GZIPPED	False
preload_metadata	AWS_PRELOAD_METADATA	False
gzip_content_types	GZIP_CONTENT_TYPES	('text/css', 'text/javascript', 'application/javascript', 'application/x-javascript', 'image/svg+xml')
url_protocol	AWS_S3_URL_PROTOCOL	http:
host	AWS_S3_HOST	S3Connection.DefaultHost
use_ssl	AWS_S3_USE_SSL	True
port	AWS_S3_PORT	None
proxy	AWS_S3_PROXY_HOST	None
proxy_port	AWS_S3_PROXY_PORT	None
The max amount of memory a returned file can take up before being rolled over into a temporary file on disk. Default is 0: Do not roll over.		
max_memory_size	AWS_S3_MAX_MEMORY_SIZE	

Appendix: Conversion of ‘Replicas’

Replicas used to be the method of file storage abstraction in MyTardis versions 3.x. The StorageBoxes replace this. For pain-free upgrading, a conversion has been included with the database migrations that works as follows:

All ‘Locations’ that are local are converted to default (folder on disk) StorageBoxes. All ‘Locations’ that are not local are converted to dummy ‘link only’ StorageBoxes with the corresponding name. These can be upgraded manually to a StorageBox with an appropriate backend after the migration has taken place.

Max size is set to size of disk, hence for multiple locations on the same disk this number provides no protection. This also should be set to reasonable values manually after the migration.

Each ‘Replica’ of a file will be converted to a DataFileObject pointing to the relevant StorageBox.

All files are manually reverified, so that unverified entries can be checked for errors.

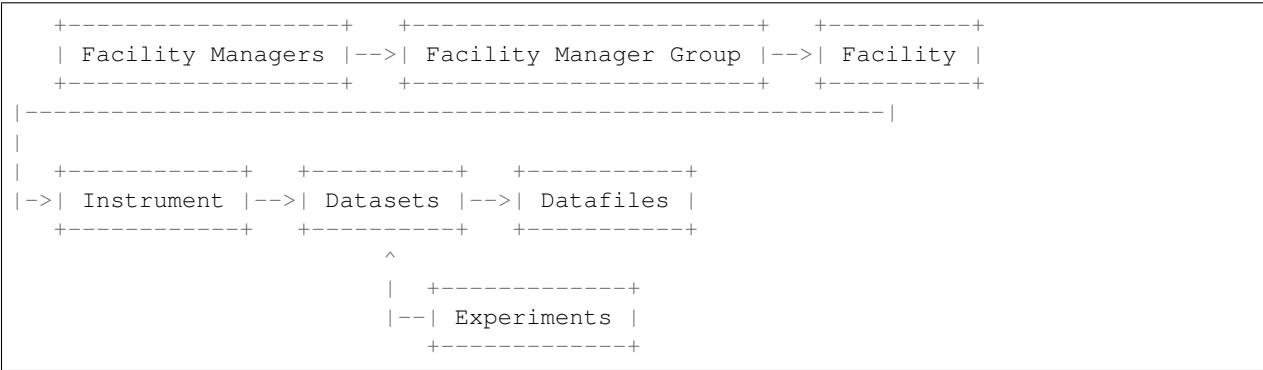

11.2.8 Facility Overview

Introduction

The Facility Overview included with MyTardis allows facility administrators to monitor the output of connected instruments, highlighting unverified files, dataset size, file counts and file listings.

Setup

In order for datasets to appear in the Facility Overview, each dataset must be associated with an Instrument, which is itself associated with a Facility. The Facility object will reference a facility administrator's group, members of which may view the Facility Overview.

The facility managers, facility manager groups, facilities and instruments may be configured via the django admin interface. MyData, the desktop uploader client for the MyTardis server, can be configured to assign the appropriate instrument to uploaded datasets at the point of ingestion.

It should be noted that the dataset visibility within the facility overview is limited to dataset and datafile listings only. Access to the experiment and dataset views, as well as raw data, is still controlled via the [ACL framework](#).

Usage

Members of the facility manager groups for one or more facilities will see the “Facility Overview” menu item in the MyTardis web portal. After opening the facility overview, a list of recently ingested datasets will be displayed from the facility being managed. If a user manages multiple facilities, a blue drop-down selector will also appear on the right-hand side of the page. As the facility overview is designed to give a snapshot of recently uploaded datasets, older data is not immediately accessible; MyTardis’ [search feature](#) is better suited to this.

In addition to simply listing the most recent datasets, the datasets can be grouped by instrument or by owner, and filtered by username, experiment name and instrument name. Note that while filters are active, it may appear as though no new pages are loaded by clicking “Load more”, since the additional datasets fetched from the server might not match the active filters.

11.2.9 Task Priorities

Overview

From v4.1.0, MyTardis assumes the use of RabbitMQ as its message broker, and instructs Celery to create a “celery” queue with task priorities enabled. The queue’s maximum priority is set to 10 in `tardis/default_settings/celery_settings.py` which is used when setting up the Celery app in `tardis/celery.py`:

```
tardis/default_settings/celery_settings.py
-----
...
MAX_TASK_PRIORITY = 10
DEFAULT_TASK_PRIORITY = 5
DEFAULT_EMAIL_TASK_PRIORITY = 10

CELERY_DEFAULT_QUEUE = 'celery'
# The 'x-max-priority' argument will only be respected by the RabbitMQ broker,
# which is the recommended broker for MyTardis:
CELERY_QUEUES = (
    Queue('celery', Exchange('celery'),
          routing_key='celery',
          queue_arguments={'x-max-priority': MAX_TASK_PRIORITY}),
)
tardis/celery.py
-----
...
tardis_app = Celery('tardis')
tardis_app.config_from_object('django.conf:settings')
...
```

Celery's `apply_async` method's `shadow` argument is used to annotate storage box related task names with the location (storage box name) which they are running in, e.g. `dfo_verify` becomes `dfo_verify location:default-storage`:

```
tardis/tardis_portal/tasks.py
-----
...
def verify_dfos(**kwargs):
    ...
    for dfo in dfos_to_verify:
        kwargs['priority'] = dfo.priority
        kwargs['shadow'] = 'dfo_verify location:%s' % dfo.storage_box.name
        dfo_verify.apply_async(args=[dfo.id], **kwargs)
...
```

Monitoring

We can confirm that the `x-max-priority` argument was supplied when creating the queue by running `rabbitmqctl report` on our RabbitMQ server:

```
$ sudo rabbitmqctl report | grep 'x-max-priority'
...
Listing queues for vhost mytardis ...
name      durable auto_delete      arguments ...
...
celery      true     false      [{"x-max-priority":10}] ...
```

We can list the tasks currently running (and observe their priorities) by running `celery inspect active` from one of our Celery nodes:

```
(mytardis) mytardis@celery0 ~/mytardis$ DJANGO_SETTINGS_MODULE=tardis.settings celery_
→-A tardis.celery.tardis_app inspect active
-> celery@allqueues.celery0: OK
```

(continues on next page)

(continued from previous page)

```

    * {u'args': u'[32933203]', u'time_start': 1548368931.7151582, u'name': u'dfo_
    ↵verify location:default-storage',
      u'delivery_info': {u'priority': 5, u'redelivered': False, u'routing_key': u
    ↵'celery', u'exchange': u''},
      u'hostname': u'celery@allqueues.celery0', u'acknowledged': False, u'kwargs': u'
    ↵{}',
      u'type': u'tardis_portal.dfo.verify', u'id': u'50c80b84-5d64-44c7-a6d4-
    ↵c551b6d14e22', u'worker_pid': 3730}
-> celery@allqueues.celery2: OK
  - empty -
...
-> celery@allqueues.celery7: OK
  * {u'args': u'[30476811]', u'time_start': 1548368924.2799926, u'name': u'dfo_
    ↵verify location:default-storage',
      u'delivery_info': {u'priority': 5, u'redelivered': False, u'routing_key': u
    ↵'celery', u'exchange': u''},
      u'hostname': u'celery@allqueues.celery7', u'acknowledged': False, u'kwargs': u'
    ↵{}',
      u'type': u'tardis_portal.dfo.verify', u'id': u'de7d0fe1-f386-4937-af7f-
    ↵a693e7630fb5', u'worker_pid': 9051}
...
-> celery@allqueues.celery14: OK
  * {u'args': u'[289]', u'time_start': 1548368427.9639463, u'name': u'sbox_cache_
    ↵files location:big-data1',
      u'delivery_info': {u'priority': 4, u'redelivered': False, u'routing_key': u
    ↵'celery', u'exchange': u''},
      u'hostname': u'celery@allqueues.celery14', u'acknowledged': False, u'kwargs': u'
    ↵{}',
      u'type': u'tardis_portal.storage_box.cache_files', u'id': u'8767709f-ae98-4735-
    ↵9d29-21bb5b13e230', u'worker_pid': 15906}

```

Notice that most tasks have the default priority of 5 (defined in `tardis/default_settings/celery_settings.py` as `DEFAULT_TASK_PRIORITY`) and that the task operating on a file from the `big-data1` storage boxes has a lower priority of 4.

Default priorities for storage boxes can be configured via StorageBox Attributes. We can check which storage boxes have priorities specified in the Django shell as follows:

```
(mytardis) mytardis@celery0:~/mytardis$ ./manage.py shell_plus

>>> StorageBoxAttribute.objects.filter(key='priority')
<QuerySet [<StorageBoxAttribute: big-data1> priority: 4>, <StorageBoxAttribute: big-
    ↵data2> priority: 4>]>
```

So in the example above, explicit priorities are only set for the “big-data1” and “big-data2” storage boxes.

Common Problems and Solutions

Celery workers time out when running `celery inspect active`

When running `celery inspect active` sometimes you will see this error:

```
Error: No nodes replied within time constraint.
```

Usually, running `celery inspect active` again will resolve the problem, i.e. it will just work without error on subsequent attempts.

If desired, you can specify a `timeout` e.g. `timeout 10` but usually running `celery inspect active` again does the trick.

Non-priority queue already exists

If an attempt to submit a task to the queue (with `apply_async`) triggers an error like this:

```
PreconditionFailed: Queue.declare: (406) PRECONDITION_FAILED - inequivalent arg 'x-max-priority' for queue 'celery' in vhost '/': received the value '10' of type 'signedint' but current is none
```

This means that the MyTardis process attempting to submit the task is expecting the queue to have the `x-max-priority` argument, but it doesn't have that argument (see `rabbitmqctl report` above).

In this case, you can delete the `celery` queue, and allow Celery to recreate it with the `x-max-priority` argument:

```
(mytardis) mytardis@celery0 ~/mytardis$ DJANGO_SETTINGS_MODULE=tardis.settings celery -A tardis.celery.tardis_app amqp queue.delete celery
```

11.3 Development

11.3.1 Architecture

This page describes the architecture of MyTardis.

MyTardis is built on the Django web framework, which itself is built on Python, thus MyTardis follows the architectural model of Django.

Component Architecture

Web Server MyTardis is typically deployed with the standard `Nginx + Gunicorn + Django + Python` stack.

RDBMS Ideally, use PostgreSQL. MySQL or MariaDB may be usable but it is not as well tested.

Data Storage Local disk, network mounted disks as well as S3 and SFTP are supported.

Ingestion Ingestion is normally site specific. A desktop application is available (MyData).

Functional Architecture

MyTardis follows the standard Django architecture.

The major functional modules in MyTardis are:

API A RESTful API provides anonymous and authenticated access to most of the stored data.

Auth Authentication and Authorisation.

Download Data download functionality.

Filters Processing of metadata as data is uploaded, e.g. extract EXIF metadata from JPEG files.

Management Additional commands for the Django CLI. The backup utility is implemented as a Django command.

Migrations Database migration code.

Publish RIF-CS metadata publication.

Search Provides a searchable and authorisation enabled index for quickly finding data.

SFTP server Provides read access to data in MyTardis via the SFTP protocol

Information on the individual modules is available from the modindex.

Scalability Model

At the component / module level, performance and Scalability within MyTardis is achieved by:

- Allowing long lived or compute intensive operations to be hosted on separate machines from the main web server.
 - E.g. by running multiple web servers and sending long lived operations, such as ingestion, to a server reserved for such operations.
- Performance and Scalability of the database is achieved by a combination of 1) optimising the SQL requests issued by MyTardis, and 2) database specific scalability, please refer to the appropriate database documentation.
- Performance and Scalability of the web server is provided through the normal mechanisms for nginx / wsgi hosted python applications, e,g,:
 - Increasing individual Server capability
 - * Individual Server performance / utilization may be managed by controlling the number of python (django) processes active at any one time.
 - Deploying multiple web servers
 - * Multiple web servers may be deployed using standard mechanisms, e.g. load balancers. State (session) information is distributed using Django's standard session model.
- The Data Archive is a normal file system, e.g. NFS, SAMBA, etc., with performance and scalability dependent on the implementation and deployment.
- Extraction and formatting of metadata for ingestion is up to the client and may be distributed across any number of machines.

SQL Scalability Notes

The datafileparameter table is expected to be the single largest table by an order of magnitude, in the hundreds of millions of records (at the Australian Synchrotron).

For Postgres, this will probably be addressed by table partitioning. In this case using a date field to partition is often recommended. Dates may be introduced as part of the support for annotations, raw data, versioned data and derived data.

Persistance and Data Architecture

Django provides an Object-Relational-Model that maps Django Models to the underlying relational database.

The Django Models are defined in `tardis.tardis_portal.models`.

Security Model

Authentication

Access to data catalogued by MyTardis may be either public, i.e. anonymous access allowed, or private, requiring authentication. The Authentication Framework is documented in [ref-authframework](#).

Authorisation

MyTardis includes an extensible authorisation engine, documented in [ref-authframework](#) and [Authorisation Framework](#).

Class Diagram

Unless the application has a very rich business model (which MyTardis does not), a class diagram doesn't convey much information in Django applications (it ends up being a flat list of classes). To understand the context in which the MyTardis classes are created, please refer to the Django documentation, <http://docs.djangoproject.com/> on the responsibilities of models, views, managers and templates.

Source Code

This section describes the top level layout of the source code in the [GitHub](#) repository.

- docs
 - MyTardis User and Administrative documentation
- tardis
 - apps
 - * **Contains all the optional functionality and installation specific** functionality. Examples include the optional ANDS Register (ands_register) and Related Info (related_info) tabs, and the ANSTO (mecat-ansto) and Australian Synchrotron (mecat-as) installation specific modules.
 - * **Some applications are part of the main code base, others can be added** at installation time.
 - search
 - * Search related code
 - tardis_portal
 - * This is the main django application that contains most of the core MyTardis functionality

11.3.2 Authorisation Framework

Django Authorisation

Django has a built-in authorisation/permission mechanism that is in use by default. It is enabled in MyTardis in `default_settings.py` together with the custom object level permission framework described below.

```
AUTHENTICATION_BACKENDS = (
    'django.contrib.auth.backends.ModelBackend',
    'tardis.tardis_portal.auth.authorisation.ACIAwareBackend',
)
```

The Django default permissions are automatically available for each Model. The verbs are add, change, delete, and they can be queried on the user object as follows:

```
user.has_perm('tardis_portal.add_experiment')
user.has_perm('tardis_portal.add_dataset')
user.has_perm('tardis_portal.change_experiment')
user.has_perm('tardis_portal.delete_datasetparameterset')
```

There is a function in `tardis.tardis_portal.auth.authservice` called `_set_user_from_dict` that adds the following permissions for each new user created using custom methods:

```
'add_experiment'
'change_experiment'
'change_group'
'change_userauthentication'
'change_experimentacl'
```

These permissions apply in general and are augmented by ACLs

Object Level Permissions and Access Control Lists

The main purpose of the ACL system is to manage per experiment permissions. The architecture allows for future expansion to more fine grained permission management. However, at this stage only the Experiment level is supported by the user interface.

Permissions are applied with a few predefined roles:

read read permission allows individuals and groups access to view an experiment.

write write permissions cover addition of new datasets and datafiles and also deletion of datafile.

delete delete permission allows deletion of datasets and experiments.

Roles are applied through the web using the *Control Panel* and can be applied to either users or groups.

To make an experiment public requires an explicit publish action.

The ACL permissions can be queried on the user object just like standard permissions, however, with the addition of the object in question:

```
user.has_perm('tardis_acls.change_experiment', experiment)
```

Verbs currently available are change, view, delete, owns, share.

The translation of ACLs to `has_perm` verbs is defined in a function in `tardis.tardis_portal.auth.authorisation`.

To allow for querying on any object related to experiments, extra logic was added to some of the models. To support the logic, in addition to ACLs, `has_perm` calls model functions named `_has_VERB_perm`, which allows model-specific permission logic.

The current policy is that if those functions return True or False then that result is returned without further checking. If they return an object, permissions will be checked for this object thereby allowing delegation.

11.3.3 RESTful API for MyTardis

The data and metadata stored in MyTardis instances is made accessible through a RESTful API.

Not all functionality has been exposed via the API at this time. This documentation reflects what is available and tested.

The API version v1 is built on the Tastypie framework.

The RESTful API can also be explored via the automatically generated Swagger documentation at <http://mytardis-example.com/api/v1/swagger/>.

See swagger.io for details on the Swagger standard.

API accessible models

- Experiment
- ExperimentParameterSet
- ExperimentParameter
-
- Dataset
- DatasetParameterSet
- DatasetParameter
-
- DataFile
- DatafileParameterSet
- DatafileParameter
-
- StorageBox
- StorageBoxOption
- StorageBoxAttribute
-
- Schema
- ParameterName
-
- User
- Group
-
- Facility
- Instrument
-
- ObjectACL

Authentication

Currently implemented are Basic Auth, to be used via HTTPS only, and SessionAuth which queries Django sessions. Due to our desire to provide information to users without any login, eg. for public data, the Basic Auth mechanism is slightly non-standard.

The standard sends an anonymous request, awaits a WWW-Authenticate header, then sends authentication credentials. Instead, this API sends public data for anonymous requests.

Using `curl` or the `requests` library this poses no problem. However, using `urllib2` or web browser without a Django session is not going to work out of the box.

Here is a snippet (found here: <http://stackoverflow.com/questions/4628610/does-urllib2-support-preemptive-authentication-authentication>) that makes `urllib2` work, should you want to use this library:

```
class PreemptiveBasicAuthHandler(urllib2.BaseHandler):

    def __init__(self, password_mgr=None):
        if password_mgr is None:
            password_mgr = urllib2.HTTPPasswordMgrWithDefaultRealm()
        self.passwd = password_mgr
        self.add_password = self.passwd.add_password

    def http_request(self, req):
        uri = req.get_full_url()
        user, pw = self.passwd.find_user_password(None, uri)
        if pw is None:
            return req

        raw = "%s:%s" % (user, pw)
        auth = 'Basic %s' % base64.b64encode(raw).strip()
        req.add_unredirected_header('Authorization', auth)
        return req

auth_handler = PreemptiveBasicAuthHandler()
auth_handler.add_password(realme=None,
                         uri=url,
                         user='mytardis',
                         passwd='mytardis')
opener = urllib2.build_opener(auth_handler)
# ...and install it globally so it can be used with urlopen.
urllib2.install_opener(opener)
```

Querying the database (GET)

All endpoints support querying lists and individual records via GET requests. Some support more complex queries via GET parameters as well.

Creating objects, adding files (POST)

The creation of Experiments, Datasets and Dataset_Files via POSTs with the option to include metadata/parametersets has been implemented and tested.

The following examples demonstrate how to go about it.

In all except the file attachment case the POST data should be a JSON string, the Content-Type header needs to be set to application/json and the Accept header as well. Other response formats may be made available in the future.

In all cases the URI of the created object is returned in the Location header of the response.

Experiments

Example JSON input

```
{  
    "title": "API-created Experiment #1",  
    "description": "Wow, all automatic!",  
    "institution_name": "Monash University",  
    "parameter_sets": [  
        {  
            "schema": "http://institution.com/my/schema",  
            "parameters": [  
                {  
                    "name": "important_parameter_1",  
                    "value": "Test16"  
                },  
                {  
                    "name": "important_parameter_3",  
                    "value": "57.136"  
                }  
            ]  
        },  
        {  
            "schema": "http://company.com/some/other/schema",  
            "parameters": [  
                {  
                    "name": "meaningful_name",  
                    "value": "Test17"  
                },  
                {  
                    "name": "meaningless_name",  
                    "value": "1234"  
                }  
            ]  
        }  
    ]  
}
```

This creates an experiment with two parametersets with two parameters each.

Alternative to Schema namespaces and Parameter names, you can also specify the URIs to each. Until the querying of Schemas and Parameters is documented this is discouraged.

Datasets

Example JSON input:

```
{  
    "description": "API-created Dataset",  
    "experiments": [  
        {  
            "id": "1234567890",  
            "label": "Experiment 1"  
        },  
        {  
            "id": "9876543210",  
            "label": "Experiment 2"  
        }  
    ]  
}
```

(continues on next page)

(continued from previous page)

```

"/api/v1/experiment/1/",
"/api/v1/experiment/2/"
],
"immutable": false,
"parameter_sets": [
{
  "parameters": [
    {
      "name": "obscure-instrument-setting-52",
      "value": "awesome dataset api POST"
    },
    {
      "name": "temperature",
      "value": "301"
    }
  ],
  "schema": "http://datasets.com/need/schemas/too"
},
{
  "parameters": [
    {
      "name": "someotherparameter",
      "value": "some other value"
    }
  ],
  "schema": "http://better-datasets.com/offers/better/schemas"
}
]
}

```

DataFiles

There are three ways to add a file to MyTardis via the API.

Via multipart form POST

This works for single files at the moment.

The key is to send a multipart-form instead of ‘application/json’. This can be accomplished with the requests library as shown in the following example.

To use requests you need to install it first, eg. pip install requests.

Also, for this to work, the POST data needs to be sent with the JSON string called ‘json_data’ and the file called ‘attached_file’.

Example JSON input:

```
{
  "dataset": "/api/v1/dataset/1/",
  "filename": "mytestfile.txt",
  "md5sum": "c858d6319609d6db3c091b09783c479c",
  "size": "12",
  "mimetype": "text/plain",
  "parameter_sets": []
}
```

(continues on next page)

(continued from previous page)

```
"schema": "http://datafileshop.com/fileinfo/v1",
"parameters": [
    {
        "name": "fileparameter1",
        "value": "123"
    },
    {
        "name": "fileparameter2",
        "value": "1234"
    }
]
}
```

Example requests script:

```
import requests
from requests.auth import HTTPBasicAuth

url = "http://localhost:8000/api/v1/dataset_file/"
headers = {'Accept': 'application/json'}
response = requests.post(url, data={"json_data": data}, headers=headers,
                         files={'attached_file': open(filename, 'rb')},
                         auth=HTTPBasicAuth(username, password)
                     )
```

Via staging location

Another way to add a file is to create the database entry first without providing a storage location. This will return back a location on the server that you are assumed to have access to. Once the file appears there, for example when you copy it there, it will be moved to its permanent storage location managed by MyTardis.

The full file path that you should copy/move the file to is returned as the content of the response.

Example JSON input:

```
{
    "dataset": "/api/v1/dataset/1/",
    "filename": "mytestfile.txt",
    "md5sum": "c858d6319609d6db3c091b09783c479c",
    "size": "12",
    "mimetype": "text/plain",
    "parameter_sets": [
        {
            "schema": "http://datafileshop.com/fileinfo/v1",
            "parameters": [
                {
                    "name": "fileparameter1",
                    "value": "123"
                },
                {
                    "name": "fileparameter2",
                    "value": "1234"
                }
            ]
        }
    ]
}
```

Via shared permanent storage location

This method assumes that there exists a storage that is shared between MyTardis and you. The registered file will remain in this location.

For this to work you need to get a Location (internal MyTardis settings) name to submit with your metadata.

Examples JSON:

```
{
    "dataset": "/api/v1/dataset/1/",
    "filename": "mytestfile.txt",
    "md5sum": "c858d6319609d6db3c091b09783c479c",
    "size": "12",
    "mimetype": "text/plain",
    "replicas": [
        {
            "url": "mytestfile.txt",
            "location": "local",
            "protocol": "file"
        }
    ],
    "parameter_sets": [
        {
            "schema": "http://datafileshop.com/fileinfo/2",
            "parameters": [
                {
                    "name": "fileparameter1",
                    "value": "123"
                },
                {
                    "name": "fileparameter2",
                    "value": "123"
                }
            ]
        }
    ]
}
```

urllib2 POST example script

Replace MODEL with one of the available model names in lower case. data is the JSON as a string.

```
import urllib2
url = "http://localhost:8000/api/v1/MODEL/"
headers = {'Accept': 'application/json',
           'Content-Type': 'application/json'}
auth_handler = urllib2.HTTPBasicAuthHandler()
auth_handler.add_password(realms="django-tastypie",
                           uri=url,
                           user=username,
                           passwd=password)
opener = urllib2.build_opener(auth_handler)
urllib2.install_opener(opener)
myrequest = urllib2.Request(url=url, data=data,
                            headers=headers)
myrequest.get_method = lambda: 'POST'
output = "error"
output = urllib2.urlopen(myrequest)
print output.headers["Location"]
```

11.3.4 Tests

Running the Test Suite

Run this command to run the unit tests:

```
./test.py
```

If you want to specify any options or specific tests to run, the test argument is required first:

```
./test.py test --some-argument
```

You can choose to run the test suite with different options (e.g. with coverage, with different verbosity, etc.). To see the full list of options, run the same command with the `--help` flag.

Running Individual Unit Tests

The unit tests reside in the `tardis/tardis_portal/tests` directory. To run the unit tests individually, you can use this command:

```
./test.py test <test_module_name_here>
```

Note that the test module name argument should be the relative file path with “.” as folder separator. For example, if you want to run the test “`test_authentication.py`”, then your command to execute this test would be:

```
./test.py test tardis.tardis_portal.tests.test_authentication
```

Other options

You can choose to include different options when running the unit tests (e.g. run in verbose mode, print out a traceback, etc.). Run the `test` or `django test` command with `--help` flag to see the the full list of options:

```
./test.py test --help
```

Running BDD tests

To run BDD (Behaviour Driven Development) tests with the default settings and headless Chrome, download Chromedriver from <http://chromedriver.chromium.org/downloads> and make it available in your PATH (e.g. in `/usr/local/bin/`) and run:

```
./test.py behave
```

Running QUnit tests

The QUnit tests reside in the `js_tests/` directory.

`package.json` contains `devDependencies` required for running these tests.

Running `npm install` will install everything you need, whereas `npm install --production` will skip the `devDependencies`.

You can run the QUnit tests with:

```
npm test
```

Or by running a web server:

```
python -m SimpleHTTPServer
```

and opening http://127.0.0.1:8000/js_tests/tests.html in your browser.

11.3.5 tardis

tardis package

Subpackages

tardis.analytics package

Submodules

tardis.analytics.apps module

```
class tardis.analytics.apps.AnalyticsConfig(app_name, app_module)
    Bases: django.apps.config.AppConfig
    name = 'tardis.analytics'
    verbose_name = 'Analytics framework'
```

tardis.analytics.ga module

Google analytics tracking

```
tardis.analytics.ga.track_download(label, session_id, ip, user, total_size=None,
                                    num_files=None, ua=None)
tardis.analytics.ga.track_login(label, session_id, ip, user)
tardis.analytics.ga.track_logout(label, session_id, ip, user)
```

tardis.analytics.tracker module

Generic tracking and analytics interface Supports Google Analytics through ga.py, others may follow

```
class tardis.analytics.tracker.IteratorTracker(iterator, tracker_data=None)
    Bases: object
```

wraps file iterator to track successful and incomplete downloads

```
close()
next()
```

```
tardis.analytics.tracker.service = <module 'tardis.analytics.ga' from '/home/docs/checkouts...
```

This can become a setting to other service in the future

Module contents

tardis.apps package

Subpackages

tardis.apps.anzsrc_codes package

Subpackages

tardis.apps.anzsrc_codes.tests package

Submodules

tardis.apps.anzsrc_codes.tests.test_oaipmh module

```
class tardis.apps.anzsrc_codes.tests.test_oaipmh.RifCSTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase

    setUp()
        Hook method for setting up the test fixture before exercising it.

    testExistsInOaipmh()
```

tardis.apps.anzsrc_codes.tests.tests module

```
class tardis.apps.anzsrc_codes.tests.tests.TabTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase

    setUp()
        Hook method for setting up the test fixture before exercising it.

    testAccessWithReadPerms()
    testAccessWithoutReadPerms()
```

Module contents

Submodules

tardis.apps.anzsrc_codes.forms module

```
class tardis.apps.anzsrc_codes.forms.FoRCodeForm(data=None, files=None,
                                                 auto_id=u'id_%s', prefix=None,
                                                 initial=None, error_class=<class
                                                 'django.forms.utils.ErrorList'>,
                                                 label_suffix=None,
                                                 empty_permitted=False,
                                                 field_order=None,
                                                 use_required_attribute=None,
                                                 renderer=None)

Bases: django.forms.Form

base_fields = {'code': <django.forms.fields.CharField object>, 'name': <django.forms.

declared_fields = {'code': <django.forms.fields.CharField object>, 'name': <django.f.

media
```

tardis.apps.anzsrc_codes.models module

tardis.apps.anzsrc_codes.settings module

tardis.apps.anzsrc_codes.urls module

tardis.apps.anzsrc_codes.views module

Module contents

tardis.apps.deep_storage_download_mapper package

Submodules

tardis.apps.deep_storage_download_mapper.mapper module

File mapper that works for files stored in deep directory structures. It recreates the structure as stored in the datafile directory

```
tardis.apps.deep_storage_download_mapper.mapper.deep_storage_mapper(obj,
                                                                     root-
                                                                     dir=None)
```

If rootdir is None, just return a filesystem-safe representation of the object, e.g. “DatasetDescription_123” or “strange %2F filename.txt”

For now, only DataFiles are supported when rootdir is not None.

Parameters

- **obj** (`DataFile`, `Dataset` or `Experiment`) – The model instance (`DataFile`, `Dataset` or `Experiment`) to generate a path for.
- **rootdir** (`basestring`) – The top-level directory name, or None

Returns Filesystem-safe path for the object in the archive or SFTP view.

Return type `basestring`

Raises

- `Exception` –
- `NotImplementedError` –

`tardis.apps.deep_storage_download_mapper.urls module`

Module contents

`tardis.apps.dl_mapper_df_dir_only package`

```

tardis.apps.equipment.models module

```
class tardis.apps.equipment.models.Equipment(id, key, description, make, model, type, serial, comm, decomm, url)
```

Bases: django.db.models.base.Model

exception DoesNotExist

Bases: django.core.exceptions.ObjectDoesNotExist

exception MultipleObjectsReturned

Bases: django.core.exceptions.MultipleObjectsReturned

comm

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

dataset

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):  
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

pizza.toppings and topping.pizzas are ManyToManyDescriptor instances.

Most of the implementation is delegated to a dynamically defined manager class built by create_forward_many_to_many_manager() defined below.

decomm

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

description

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

key

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

make

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

model

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

objects = <django.db.models.manager.Manager object>**serial**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

type

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

url

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

tardis.apps.equipment.tests module

tests.py <http://docs.djangoproject.com/en/dev/topics/testing/>

class tardis.apps.equipment.tests.EquipmentTestCase (*methodName='runTest'*)

Bases: django.test.testcases.TestCase

fixtures = ['initial_data.json']

setUp()

Hook method for setting up the test fixture before exercising it.

testEquipmentDetail()

testEquipmentList()

testSearchEquipmentForm()

testSearchEquipmentResult()

tardis.apps.equipment.tests.suite()

tardis.apps.equipment.urls module

tardis.apps.equipment.views module

```
tardis.apps.equipment.views.index(request)
tardis.apps.equipment.views.search(request)
tardis.apps.equipment.views.view_id(request, object_id)
tardis.apps.equipment.views.view_key(request, object_key)
```

Module contents

tardis.apps.filepicker package

Submodules

tardis.apps.filepicker.filepicker_settings module

tardis.apps.filepicker.urls module

tardis.apps.filepicker.utils module

taken from https://raw.github.com/Filepicker/django-filepicker/master/django_filepicker/utils.py on 11 Apr 2013

```
class tardis.apps.filepicker.utils.FilepickerFile(url)
    Bases: object

    cleanup()
        Removes any downloaded objects and closes open files.

    filepicker_url_regex = <_sre.SRE_Pattern object>
    get_file()
        Downloads the file from filepicker.io and returns a Django File wrapper object
```

tardis.apps.filepicker.views module

Filepicker.io button view and upload handler

Module contents

tardis.apps.oaipmh package

Subpackages

tardis.apps.oaipmh.provider package

Submodules

tardis.apps.oaipmh.provider.base module

```
class tardis.apps.oaipmh.provider.base.BaseProvider(site)
Bases: oaipmh.interfaces.IOAI, object
```

A base provider which roughly implements the PyOAI interface for OAI-PMH servers.

Extend this if you're writing your own provider for a new type or a different metadata format.

```
getRecord(metadataPrefix, identifier)
```

Get a record for a metadataPrefix and identifier.

Parameters

- **metadataPrefix** (*string*) – identifies metadata set to retrieve
- **identifier** (*string*) –
 - repository-unique identifier of record

Raises

- **oaipmh.error.CannotDisseminateFormatError** – if metadataPrefix is unknown or not supported by identifier.
- **oaipmh.error.IdDoesNotExistError** – if identifier is unknown or illegal.

Returns a header, metadata, about tuple describing the record.

```
identify()
```

Retrieve information about the repository.

Returns an Identify object describing the repository.

```
listIdentifiers(metadataPrefix, set=None, from_=None, until=None)
```

Get a list of header information on records.

Parameters

- **metadataPrefix** (*string*) – identifies metadata set to retrieve
- **set** (*string*) – set identifier; only return headers in set
- **from** (*datetime*) – only retrieve headers from **from_** date forward (in naive UTC)
- **until** (*datetime*) – only retrieve headers with dates up to and including until date (in naive UTC)

Raises

- **error.CannotDisseminateFormatError** – if metadataPrefix is not supported by the repository.
- **error.NoSetHierarchyError** – if the repository does not support sets.

Returns an iterable of headers.

```
listMetadataFormats(identifier=None)
```

List metadata formats supported by repository or record.

Parameters **identifier** (*string*) – identify record for which we want to know all supported metadata formats. If absent, list all metadata formats supported by repository.

Raises

- **error.IdDoesNotExistError** – if record with identifier does not exist.

- **error.NoMetadataFormatsError** – if no formats are available for the indicated record.

Returns an iterable of metadataPrefix, schema, metadataNamespace tuples (each entry in the tuple is a string).

listRecords (*metadataPrefix*, *set=None*, *from_=None*, *until=None*)

Get a list of header, metadata and about information on records.

Parameters

- **metadataPrefix** (*string*) – identifies metadata set to retrieve
- **set** (*string*) – set identifier; only return records in set
- **from** (*datetime*) – only retrieve records from *from_* date forward (in naive UTC)
- **until** (*datetime*) – only retrieve records with dates up to and including *until* date (in naive UTC)

Raises

- **oaipmh.error.CannotDisseminateFormatError** – if metadataPrefix is not supported by the repository.
- **oaipmh.error.NoSetHierarchyError** – if the repository does not support sets.

Returns an iterable of header, metadata, about tuples.

listSets ()

Get a list of sets in the repository.

Raises **error.NoSetHierarchyError** – if the repository does not support sets.

Returns an iterable of setSpec, setName tuples (strings).

writeMetadata (*element*, *metadata*)

Create XML elements under the given element, using the provided metadata.

Should avoid doing any model-lookups, as they should be done when creating the metadata.

Parameters

- **element** (*lxml.etree.Element*) – element to put all content under (as SubElements)
- **metadata** (*oaipmh.common.Metadata*) – metadata to turn into XML

Raises **NotImplementedError** – not implemented

tardis.apps.oaipmh.provider.experiment module

```
class tardis.apps.oaipmh.provider.experiment.AbstractExperimentProvider(site)
Bases: tardis.apps.oaipmh.provider.base.BaseProvider

NS_CC = 'http://www.tardis.edu.au/schemas/creativecommons/2011/05/17'

getRecord(metadataPrefix, identifier)
    Return record if we handle it.

static get_id(obj)

listIdentifiers(metadataPrefix, set=None, from_=None, until=None)
    Return identifiers in range, provided we handle this metadata prefix.
```

```
listRecords (metadataPrefix, set=None, from_=None, until=None)
    Return records in range, provided we handle this metadata prefix.

listSets()
    No support for sets.

class tardis.apps.oaipmh.provider.experiment.DcExperimentProvider (site)
    Bases: tardis.apps.oaipmh.provider.experiment.AbstractExperimentProvider

listMetadataFormats (identifier=None)
    Return metadata format if no identifier, or identifier is a valid experiment.

class tardis.apps.oaipmh.provider.experiment.RifCsExperimentProvider (site)
    Bases: tardis.apps.oaipmh.provider.experiment.AbstractExperimentProvider

class ExperimentWriter (root, metadata, site)

    write()
    writeRegistryObjectsWrapper()
    writeRelatedAuthor (element, obj, relation)
    writeRelatedInfo (element, obj)
    writeRelatedUser (element, obj, relation)
    writeSubject (element, obj)
    static get_rifcs_id (id_, site_=None)
    listMetadataFormats (identifier=None)
        Return metadata format if no identifier, or identifier is a valid experiment.

    static writeExperimentMetadata (element, metadata, site=None, writer=None)
        Wrapper around experiment writer.

    static writeUserMetadata (element, metadata, site=None)
```

```
class tardis.apps.oaipmh.tests.provider.test_base.BaseProviderTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase

    setUp()
        Hook method for setting up the test fixture before exercising it.

    tearDown()
        Hook method for deconstructing the test fixture after testing it.
```

```
testGetRecord()
    Default behaviour should be to not handle the identifier.

testIdentify()
    There can be only one provider that responds. By default, don't.

testListIdentifiers()
    By default a provider cannot handle the given metadata prefix.

testListMetadataFormats()
    By default a provider handles no metadata formats.

testListRecords()
    By default a provider cannot handle the given metadata prefix.

testListSets()
    By default a provider does not implement sets.
```

tardis.apps.oaipmh.tests.provider.test_experiment module

```
class tardis.apps.oaipmh.tests.provider.test_experiment.AbstractExperimentProviderTC
Bases: object

setUp()

tardis.apps.oaipmh.models module

tardis.apps.oaipmh.server module

```
class tardis.apps.oaipmh.server.ProxyingMetadataRegistry(providers)
Bases: oaipmh.metadata.MetadataRegistry

A registry that only writes, and does so by proxying to Providers.

hasReader(metadata_prefix)
hasWriter(metadata_prefix)
readMetadata(metadata_prefix, element)
    Turn XML into metadata object.

    element - element to read in
    returns - metadata object

registerReader(metadata_prefix, reader)
registerWriter(metadata_prefix, writer)
writeMetadata(metadata_prefix, element, metadata)
    Write metadata as XML.

    element - ElementTree element to write under metadata - metadata object to write
```

```
class tardis.apps.oaipmh.server.ProxyingServer(providers)
Bases: oaipmh.interfaces.IOAI
```

getRecord(*metadataPrefix*, *identifier*)

Get a record for a metadataPrefix and identifier.

Raises

- **oaipmh.error.CannotDisseminateFormatError** – if no provider returns a result, but at least one provider responds with `oaipmh.error.CannotDisseminateFormatError` (meaning the identifier exists)
- **oaipmh.error.IdDoesNotExistError** – if all providers fail with `oaipmh.error.IdDoesNotExistError`

Returns first successful provider response

Return type response

identify()

Retrieve information about the repository.

Returns an `oaipmh.common.Identify` object describing the repository.

Return type `oaipmh.common.Identify`

listIdentifiers(*metadataPrefix*, ***kwargs*)

Lists identifiers from all providers as a single set.

Raises

- **error.CannotDisseminateFormatError** – if *metadataPrefix* is not supported by the repository.
- **error.NoSetHierarchyError** – if a set is provided, as the repository does not support sets.

Returns a `set`. Set of headers.

Return type set

listMetadataFormats(***kwargs*)

List metadata formats from all providers in a single set.

Raises

- **error.IdDoesNotExistError** – if record with identifier does not exist.
- **error.NoMetadataFormatsError** – if no formats are available for the indicated record, but it does exist.

Returns a *frozense*t of *metadataPrefix*, schema, metadataNamespace tuples (each entry in the tuple is a string).

Return type `frozense`t

listRecords(*metadataPrefix*, ***kwargs*)

Lists records from all providers as a single set.

Raises

- **error.CannotDisseminateFormatError** – if *metadataPrefix* is not supported by the repository.
- **error.NoSetHierarchyError** – if a set is provided, as the repository does not support sets.

Returns a `set`. Set of header, metadata, about tuples.

Return type set

listSets()

List sets.

Raises `oaipmh.error.NoSetHierarchyError` – because set hierarchies are currently not implemented

```

```
tardis.apps.openid_migration.migration.confirm_migration(request)
```

```
tardis.apps.openid_migration.migration.do_migration(request)
```

Migrating account from the account that the logged in user has provided in the Authentication Form. Migration involve relinking the UserAuthentication table entries, transferring ObjectACL entries to the migrated account, changing the Group memberships and making the old account inactive.

Parameters `request` (`Request`) – the HTTP request object

Returns The `HttpResponse` which contains `request.user`'s new list of authentication methods

Return type `HttpResponse`

```
tardis.apps.openid_migration.migration.getSupportedAuthMethods()
```

Return the list of authentication methods.

```
tardis.apps.openid_migration.migration.get_api_key(user)
```

```
tardis.apps.openid_migration.migration.get_matching_auth_provider(backend)
```

exception MultipleObjectsReturned
    Bases: django.core.exceptions.MultipleObjectsReturned

acl_id
    Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

    In the example:
    

class Child(Model):
    parent = ForeignKey(Parent, related_name='children')

    child.parent is a ForwardManyToOneDescriptor instance.

acl_id_id
    A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

id
    A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

objects = <django.db.models.manager.Manager object>

user_migration
    Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

    In the example:
    

class Child(Model):
    parent = ForeignKey(Parent, related_name='children')

    child.parent is a ForwardManyToOneDescriptor instance.

user_migration_id
    A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

class tardis.apps.openid_migration.models.OpenidACLMigrationAdmin (model, admin_site)
    Bases: django.contrib.admin.options.ModelAdmin

exception DoesNotExist

Bases: django.core.exceptions.ObjectDoesNotExist

exception MultipleObjectsReturned

Bases: django.core.exceptions.MultipleObjectsReturned

get_next_by_migration_timestamp(**morekwargs)

get_previous_by_migration_timestamp(**morekwargs)

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

migration_status

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

migration_timestamp

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

new_user

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

new_user_auth_method

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

new_user_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

objects = <django.db.models.manager.Manager object>

old_user

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

`old_user_auth_method`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`old_user_id`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`openidaclmigration_set`

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

```
class tardis.apps.openid_migration.models.OpenidUserMigrationAdmin(model, admin_site)
    Bases: django.contrib.admin.options.ModelAdmin
    list_display = ['__str__', 'old_user', 'old_user_auth_method', 'new_user_id', 'new_user']
    media
```

```
get_client_for_host(remote_host)
```

Attempts to establish a connection with the remote_host using this credential object. The remote_host may be any host, but only those in the remote_hosts field are expected to work. @type remote_host: .RemoteHost :return: a connected SSH client :rtype: SSHClient

```
static get_suitable_credential(tardis_user, remote_host, remote_user=None)
```

```
id
```

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
objects = <django.db.models.manager.Manager object>
```

password

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

remote_hosts

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

pizza.toppings and topping.pizzas are ManyToManyDescriptor instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

remote_user

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

user

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

user_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

verify_remote_access (`remote_host=None`)

@type remote_host: RemoteHost

class tardis.apps.push_to.models.CredentialAdmin (`model, admin_site`)

class tardis.apps.push_to.models.KeyPair (*args, **kwargs)
Bases: django.db.models.base.Model

A key pair

class Meta

    abstract = False

key

        Returns a subclass of PKey of the appropriate key type
        Return type PKey
        Raises ValidationError –

key_type
    A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

private_key
    A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

public_key
    A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

save (*args, **kwargs)

class tardis.apps.push_to.models.OAuthSSHCertSigningService (*args, **kwargs)
Bases: django.db.models.base.Model

Connection parameters for an OAuth2 SSH certificate signing service. Supports certificate signing server available here: https://github.com/monash-merc/ssh-authz

exception DoesNotExist
    Bases: django.core.exceptions.ObjectDoesNotExist

exception MultipleObjectsReturned
    Bases: django.core.exceptions.MultipleObjectsReturned

allow_for_all
    A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```

allowed_groups

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

pizza.toppings and topping.pizzas are ManyToManyDescriptor instances.

Most of the implementation is delegated to a dynamically defined manager class built by create_forward_many_to_many_manager() defined below.

allowed_remote_hosts

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

pizza.toppings and topping.pizzas are ManyToManyDescriptor instances.

Most of the implementation is delegated to a dynamically defined manager class built by create_forward_many_to_many_manager() defined below.

allowed_users

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

pizza.toppings and topping.pizzas are ManyToManyDescriptor instances.

Most of the implementation is delegated to a dynamically defined manager class built by create_forward_many_to_many_manager() defined below.

cert_signing_url

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

static get_available_signing_services(user)

Gets all SSH cert signing services available for a given user :param User user: User :return: allowed signing services :rtype: User

static get_oauth_service(user, service_id)

@type user: User @type service_id: int

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

nickname

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

oauth_authorize_url

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

oauth_check_token_url

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

oauth_client_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

oauth_client_secret

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

oauth_token_url

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

objects = <django.db.models.manager.Manager object>

```
class tardis.apps.push_to.models.RemoteHost (*args, **kwargs)
```

Bases: [tardis.apps.push_to.models.KeyPair](#)

A remote host that may be connected to via SSH

exception DoesNotExist

Bases: [django.core.exceptions.ObjectDoesNotExist](#)

exception MultipleObjectsReturned

Bases: [django.core.exceptions.MultipleObjectsReturned](#)

administrator

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child (Model) :
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

administrator_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

credential_set

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza (Model) :
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

pizza.toppings and topping.pizzas are ManyToManyDescriptor instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

host_name

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

logo_img

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

nickname

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

oauthsshcertsigningservice_set

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

pizza.toppings and topping.pizzas are ManyToManyDescriptor instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

objects = <django.db.models.manager.Manager object>**port**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

class tardis.apps.push_to.models.RemoteHostAdmin(model, admin_site)

Bases: django.contrib.admin.options.ModelAdmin

Hides the private key field, which is not necessary for host keys

```
fields = ['nickname', 'administrator', 'host_name', 'port', 'key_type', 'public_key',
media
```

tardis.apps.push_to.oauth_tokens module

tardis.apps.push_to.oauth_tokens.get_token(request, oauth_service)

Returns the OAuth2 token from the current session :param Request request: django session object :param OAuthSSHCertSigningService oauth_service: an

OAuthSSHCertSigningService object

Returns

Return type string

tardis.apps.push_to.oauth_tokens.get_token_data(oauth_service, token)

Gets the OAuth2 user attributes using the supplied token :param OAuthSSHCertSigningService oauth_service: an

OAuthSSHCertSigningService object

Parameters **token** (basestring) – an OAuth2 token

Returns a json object of user attributes

Return type dict

tardis.apps.push_to.oauth_tokens.set_token(*request, oauth_service, token*)

Stores the OAuth2 token in the current session :param Request *request*: django request object :param OAuthSSHCertSigningService *oauth_service*: an OAuthSSHCertSigningService object

Parameters **token** (*basestring*) – the OAuth2 token

tardis.apps.push_to.ssh_authz module

tardis.apps.push_to.ssh_authz.sign_certificate(*credential, token, url*)

An interface to the OAuth2 SSH certificate signing service @type credential: models.Credential

tardis.apps.push_to.tasks module

tardis.apps.push_to.tasks.do_file_copy(*credential_id, remote_host_id, datafile_map, base_dir=None*)
tardis.apps.push_to.tasks.make_dirs(*sftp_client, dir_list*)
tardis.apps.push_to.tasks.notify_user(*user_id, remote_host_id, success=True*)

tardis.apps.push_to.urls module

tardis.apps.push_to.utils module

tardis.apps.push_to.utils.bytes_available(*ssh_client, path*)
tardis.apps.push_to.utils.can_copy(*ssh_client, object_type, object_id, path*)
tardis.apps.push_to.utils.get_default_push_location(*sftp_client*)
tardis.apps.push_to.utils.get_object_size(*type, id*)
tardis.apps.push_to.utils.is_directory(*sftp_client, path*)
tardis.apps.push_to.utils.list_subdirectories(*sftp_client, path, show_hidden=False*)
tardis.apps.push_to.utils.shell_escape(*s*)

tardis.apps.push_to.views module

tardis.apps.push_to.views.authorize_remote_access(*request, *args, **kwargs*)

Generates an SSH certificate using an OAuth2 SSH signing service :param Request *request*: request object :param basestring *remote_host_id*: remote host id :param basestring *service_id*: OAuth2 SSH certificate signing service id :return: an error message or OAuth2 redirects :rtype: HttpResponseRedirect

tardis.apps.push_to.views.get_accessible_hosts(*request, *args, **kwargs*)

Retrieves all accessible hosts (i.e. hosts for which the user already has credentials for) including push-to trigger URLs if the object type and id are supplied :param Request *request*: request object :param object *obj_type*: data type to be copied

(experiment, dataset or datafile)

Parameters `push_obj_id` (`int`) – the database object id

Returns json object with accessible hosts

Return type `HttpResponse`

`tardis.apps.push_to.views.get_credential(request, remote_host)`

Fetches a suitable credential for the remote host, or raises an exception if none found :param Request request: request object :param RemoteHost remote_host: the RemoteHost for which a credential should be found

Returns the credential

Return type `object`

Raises `NoSuitableCredential` – raised when no credential is found

`tardis.apps.push_to.views.get_push_url_for_host(remote_host, obj_type, push_obj_id)`

Constructs a push-to URL to trigger data transfer :param RemoteHost remote_host: the RemoteHost to which data should be copied :param obj_type: data type to be copied (experiment, dataset or datafile) :type obj_type: object :param int push_obj_id: the database object id :return: a push-to URL :rtype: basestring

`tardis.apps.push_to.views.get_signing_services(request, *args, **kwargs)`

Retrieves all certificate signing services and associated hosts including push-to trigger URLs if the object type and id are supplied :param Request request: request object :param class obj_type: data type to be copied (experiment, dataset or datafile) :param int push_obj_id: the database object id :return: json object with signing services and hosts :rtype: `HttpResponse`

`tardis.apps.push_to.views.oauth_callback(request, *args, **kwargs)`

OAuth2 callback endpoint to continue the SSH certificate signing process :param Request request: request object :return: error message or redirect to the signing service with access token :rtype: `HttpResponse`

`tardis.apps.push_to.views.oauth_callback_url(request)`

Builds the oauth callback URL :param Request request: request object :return: callback URL :rtype: basestring

`tardis.apps.push_to.views.render_error_message(request, message, status=500)`

`tardis.apps.push_to.views.render_success_message(request, message, status=200)`

`tardis.apps.push_to.views.validate_remote_path(request, *args, **kwargs)`

tardis.apps.sftp.models module

```
class tardis.apps.sftp.models.SFTPPublicKey(*args, **kwargs)
    Bases: django.db.models.base.Model
```

Model for associated SFTP public keys with users

Parameters

- **user** (*ForeignKey for User*) – user who owns this public key
- **name** (*string*) – name for this public key
- **public_key** (*string*) – OpenSSH formatted public key
- **added** (*date*) – date the public key was added (Optional)

exception DoesNotExist

Bases: `django.core.exceptions.ObjectDoesNotExist`

exception MultipleObjectsReturned

Bases: `django.core.exceptions.MultipleObjectsReturned`

added

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

get_next_by_added(**morekwargs)

get_previous_by_added(**morekwargs)

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

key_type

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

name

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

objects = <django.db.models.manager.Manager object>

public_key

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

user

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

user_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

tardis.apps.sftp.sftp module

SFTP Server

```

class tardis.apps.sftp.sftp.DynamicTree (host_obj=None)
Bases: object

add_child (name, obj=None)
add_path (path)
add_path_elems (elems)
clear_children ()
get_leaf (path, update=False)
update_all_files ()
update_dataset_files ()
update_datasets ()
update_experiments ()
update_nothing ()

class tardis.apps.sftp.sftp.MySFTPHandle (df, flags=0, optional_args=None)
Bases: paramiko.sftp_handle.SFTPHandle

SFTP File Handle

stat ()
    Return an L{SFTPAttributes} object referring to this open file, or an error code. This is equivalent to L{SFTPServerInterface.stat}, except it's called on an open file instead of a path.

    @return: an attributes object for the given file, or an SFTP error code (like L{SFTP_PERMISSION_DENIED}). @rtype: L{SFTPAttributes} I{or error code}

class tardis.apps.sftp.sftp.MySFTPRequestHandler (request, client_address, server)
Bases: SocketServer.BaseRequestHandler

auth_timeout = 60
handle ()
handle_timeout ()
setup ()
timeout = 60

class tardis.apps.sftp.sftp.MySFTPServer (*args, **kwargs)
Bases: paramiko.sftp_server.SFTPServer

override SFTPServer to provide channel information to the SFTP subsystem

class tardis.apps.sftp.sftp.MySFTPServerInterface (server, *args, **kwargs)
Bases: paramiko.sftp_si.SFTPServerInterface

MyTardis data via SFTP

canonicalize (path)
    Return the canonical form of a path on the server.

experiments

list_folder (path)
    Returns a list of files within a given folder. The C{path} will use posix notation (C{“/”} separates folder names) and may be an absolute or relative path.

```

The list of files is expected to be a list of L{SFTPAttributes} objects, which are similar in structure to the objects returned by C{os.stat}. In addition, each object should have its C{filename} field filled in, since this is important to a directory listing and not normally present in C{os.stat} results.

In case of an error, you should return one of the C{SFTP_*} error codes, such as L{SFTP_PERMISSION_DENIED}.

@param path: the requested path (relative or absolute) to be listed. @type path: str @return: a list of the files in the given folder, using L{SFTPAttributes} objects. @rtype: list of L{SFTPAttributes} I{or error code}

lstat (path)

symbolic links are not supported

open (path, flags, attr)

Open a file on the server and create a handle for future operations on that file. On success, a new object subclassed from L{SFTPHandle} should be returned. This handle will be used for future operations on the file (read, write, etc). On failure, an error code such as L{SFTP_PERMISSION_DENIED} should be returned.

C{flags} contains the requested mode for opening (read-only, write-append, etc) as a bitset of flags from the C{os} module:

- C{os.O_RDONLY}
- C{os.O_WRONLY}
- C{os.O_RDWR}
- C{os.O_APPEND}
- C{os.O_CREAT}
- C{os.O_TRUNC}
- C{os.O_EXCL}

(One of C{os.O_RDONLY}, C{os.O_WRONLY}, or C{os.O_RDWR} will always be set.)

The C{attr} object contains requested attributes of the file if it has to be created. Some or all attribute fields may be missing if the client didn't specify them.

@note: The SFTP protocol defines all files to be in “binary” mode. There is no equivalent to python’s “text” mode.

Parameters

- **path** (*basestring*) – the requested datafile path
- **flags** (*int*) – flags or'd together from the C{os} module indicating the requested mode for opening the file.
- **attr** (*SFTPAttributes*) – requested attributes of the file if it is newly created.

Returns a new L{SFTPHandle} I{or error code}.

Return type SFTPHandle

session_ended()

run cleanup on exceptions or disconnection. idea: collect stats and store them in this function

session_started()

run on connection initialisation

stat (path)
 Return an L{SFTPAtributes} object for a path on the server, or an error code. If your server supports symbolic links (also known as "aliases"), you should follow them. (L{lstat} is the corresponding call that doesn't follow symlinks/aliases.)

@param path: the requested path (relative or absolute) to fetch file statistics for. @type path: str
 @return: an attributes object for the given file, or an SFTP error code (like L{SFTP_PERMISSION_DENIED}). @rtype: L{SFTPAtributes} | {or error code}

```
class tardis.apps.sftp.sftp.MyTSFTPTCPServer (address, host_key, RequestHandler-Class=None)
Bases: SocketServer.TCPServer
```

allow_reuse_address = True

close_request (request)

shutdown_request (request)

```
class tardis.apps.sftp.sftp.MyTServerInterface
Bases: paramiko.server.ServerInterface
```

check_auth_interactive (username, submethods)
 Begin an interactive authentication challenge, if supported. You should override this method in server mode if you want to support the "keyboard-interactive" auth type, which requires you to send a series of questions for the client to answer.

Return AUTH_FAILED if this auth method isn't supported. Otherwise, you should return an *.InteractiveQuery* object containing the prompts and instructions for the user. The response will be sent via a call to *check_auth_interactive_response*.

The default implementation always returns AUTH_FAILED.

Parameters

- **username** (*str*) – the username of the authenticating client
- **submethods** (*str*) – a comma-separated list of methods preferred by the client (usually empty)

Returns AUTH_FAILED if this auth method isn't supported; otherwise an object containing queries for the user

Return type int or *.InteractiveQuery*

check_auth_interactive_response (responses)

Continue or finish an interactive authentication challenge, if supported. You should override this method in server mode if you want to support the "keyboard-interactive" auth type.

Return AUTH_FAILED if the responses are not accepted, AUTH_SUCCESSFUL if the responses are accepted and complete the authentication, or AUTH_PARTIALLY_SUCCESSFUL if your authentication is stateful, and this set of responses is accepted for authentication, but more authentication is required. (In this latter case, *get_allowed_auths* will be called to report to the client what options it has for continuing the authentication.)

If you wish to continue interactive authentication with more questions, you may return an *.InteractiveQuery* object, which should cause the client to respond with more answers, calling this method again. This cycle can continue indefinitely.

The default implementation always returns AUTH_FAILED.

Parameters **responses** – list of *str* responses from the client

Returns AUTH_FAILED if the authentication fails; AUTH_SUCCESSFUL if it succeeds; AUTH_PARTIALLY_SUCCESSFUL if the interactive auth is successful, but authentication must continue; otherwise an object containing queries for the user

Return type int or *.InteractiveQuery*

check_auth_password (*username, password*)

Determine if a given username and password supplied by the client is acceptable for use in authentication.

Return AUTH_FAILED if the password is not accepted, AUTH_SUCCESSFUL if the password is accepted and completes the authentication, or AUTH_PARTIALLY_SUCCESSFUL if your authentication is stateful, and this key is accepted for authentication, but more authentication is required. (In this latter case, *get_allowed_auths* will be called to report to the client what options it has for continuing the authentication.)

The default implementation always returns AUTH_FAILED.

Parameters

- **username** (*str*) – the username of the authenticating client.
- **password** (*str*) – the password given by the client.

Returns AUTH_FAILED if the authentication fails; AUTH_SUCCESSFUL if it succeeds; AUTH_PARTIALLY_SUCCESSFUL if the password auth is successful, but authentication must continue.

Return type int

check_auth_publickey (*username, key*)

Determine if a given key supplied by the client is acceptable for use in authentication. You should override this method in server mode to check the username and key and decide if you would accept a signature made using this key.

Return AUTH_FAILED if the key is not accepted, AUTH_SUCCESSFUL if the key is accepted and completes the authentication, or AUTH_PARTIALLY_SUCCESSFUL if your authentication is stateful, and this password is accepted for authentication, but more authentication is required. (In this latter case, *get_allowed_auths* will be called to report to the client what options it has for continuing the authentication.)

Note that you don't have to actually verify any key signature here. If you're willing to accept the key, Paramiko will do the work of verifying the client's signature.

The default implementation always returns AUTH_FAILED.

Parameters

- **username** (*str*) – the username of the authenticating client
- **key** (*PKey*) – the key object provided by the client

Returns AUTH_FAILED if the client can't authenticate with this key; AUTH_SUCCESSFUL if it can; AUTH_PARTIALLY_SUCCESSFUL if it can authenticate with this key but must continue with authentication

Return type int

check_channel_request (*kind, chanid*)

Determine if a channel request of a given type will be granted, and return OPEN_SUCCEEDED or an error code. This method is called in server mode when the client requests a channel, after authentication is complete.

If you allow channel requests (and an ssh server that didn't would be useless), you should also override some of the channel request methods below, which are used to determine which services will be allowed on a given channel:

- *check_channel_pty_request*
- *check_channel_shell_request*
- *check_channel_subsystem_request*
- *check_channel_window_change_request*
- *check_channel_x11_request*
- *check_channel_forward_agent_request*

The `chanid` parameter is a small number that uniquely identifies the channel within a *.Transport*. A *.Channel* object is not created unless this method returns `OPEN_SUCCEEDED` – once a *.Channel* object is created, you can call *.Channel.get_id* to retrieve the channel ID.

The return value should either be `OPEN_SUCCEEDED` (or 0) to allow the channel request, or one of the following error codes to reject it:

- `OPEN_FAILED_ADMINISTRATIVELY_PROHIBITED`
- `OPEN_FAILED_CONNECT_FAILED`
- `OPEN_FAILED_UNKNOWN_CHANNEL_TYPE`
- `OPEN_FAILED_RESOURCE_SHORTAGE`

The default implementation always returns `OPEN_FAILED_ADMINISTRATIVELY_PROHIBITED`.

Parameters

- `kind` (*str*) – the kind of channel the client would like to open (usually "session").
- `chanid` (*int*) – ID of the channel

Returns an *int* success or failure code (listed above)

`get_allowed_auths` (*username*)

Return a list of authentication methods supported by the server. This list is sent to clients attempting to authenticate, to inform them of authentication methods that might be successful.

The “list” is actually a string of comma-separated names of types of authentication. Possible values are "password", "publickey", and "none".

The default implementation always returns "password".

Parameters `username` (*str*) – the username requesting authentication.

Returns a comma-separated *str* of authentication types

`myt_auth` (*username, password*)

`tardis.apps.sftp.sftp.start_server` (*host=None, port=None, keyfile=None*)

The SFTP_HOST_KEY setting is required for configuring SFTP access. The SFTP_PORT setting defaults to 2200.

See: `tardis/default_settings/sftp.py`

tardis.apps.sftp.urls module

tardis.apps.sftp.user_menu_modifiers module

`tardis.apps.sftp.user_menu_modifiers.add_ssh_keys_menu_item(request, user_menu)`
Add a ‘Manage SSH Keys’ item to the user menu

Parameters

- `request` (`django.http.HttpRequest`) – an HTTP Request instance
- `user_menu` (`list`) – user menu context to modify

Returns user_menu list

Return type list

tardis.apps.sftp.views module

`tardis.apps.sftp.views.cybderduck_connection_window(request, *args, **kwargs)`

`tardis.apps.sftp.views.sftp_access(request, *args, **kwargs)`

Show dynamically generated instructions on how to connect to SFTP
:param Request request: HttpRequest
:return: HttpResponse :rtype: HttpResponse

`tardis.apps.sftp.views.sftp_keys(request, *args, **kwargs)`

Generate an RSA key pair for a user.

Generates a key pair, stores the public part of the key and provides a one time opportunity for the user to download the private part of the key.

Parameters `request` (`HttpRequest`) – http request

Returns either returns form on GET request or private key download on POST request

Return type HttpResponse

Module contents

tardis.apps.social_auth package

Subpackages

tardis.apps.social_auth.auth package

Submodules

tardis.apps.social_auth.auth.authorisation module

tardis.apps.social_auth.auth.social_auth module

`tardis.apps.social_auth.auth.social_auth.add_authentication_method(**kwargs)`
Creates an authentication record for OpenID authenticated user

```
tardis.apps.social_auth.auth.social_auth.add_migration_permission(**kwargs)
    Adds permission to migrate account for OpenID authenticated user

tardis.apps.social_auth.auth.social_auth.add_user_permissions(**kwargs)
    Adds default permission to OpenID authenticated user

tardis.apps.social_auth.auth.social_auth.approve_user_auth(**kwargs)
    Sets approved status to True in user authentication This will add user permissions as well.

tardis.apps.social_auth.auth.social_auth.get_auth_method(authenticatedBackendName)
    Return matching user authentication method from list of authentication methods in settings

tardis.apps.social_auth.auth.social_auth.is_openid_migration_enabled()
    Automatically detects if a user has an account with the same email address and prompts user to perform migration.

tardis.apps.social_auth.auth.social_auth.requires_admin_approval(authenticationBackend)
    Sends MyTardis admins an email for approving account
```

[tardis.apps.social_auth.urls module](#)

Module contents

Module contents

[tardis.default_settings package](#)

Submodules

[tardis.default_settings.admins module](#)

[tardis.default_settings.analytics module](#)

tardis.default_settings.apps module

```
tardis.default_settings.apps.USER_MENU_MODIFIERS = ['tardis.apps.sftp.user_menu_modifiers.']

A list of methods which can modify the user menu defined in
```

tardis.tardis_portal.context_processors.user_menu_processor. The modifications will be applied in order, so it is possible for one app to overwrite changes made by another app whose modifier method is earlier in the list.

Each modifier method should take a django.http.HttpRequest object and a list of user menu items, and return a modified list of user menu items.

An example from the SFTP app is below:

```
USER_MENU_MODIFIERS.extend([
    'tardis.apps.sftp.user_menu_modifiers.add_ssh_keys_menu_item'
])
```

tardis.default_settings.auth module

```
tardis.default_settings.auth.AUTOGENERATE_API_KEY = False
```

Generate a tastypie API key with user post_save (tardis/tardis_portal/models/hooks.py)

```
tardis.default_settings.auth.REGISTRATION_OPEN = True
```

Enable/disable the self-registration link and form in the UI. Note - this does not actually disable the URL endpoints for registration. You must also remove the *registration* app from *INSTALLED_APPS* to disable registration.

tardis.default_settings.caches module

```
tardis.default_settings.caches.CACHES = {'celery-locks': {'BACKEND': 'django.core.cache.ba'}
```

change the CACHES setting to memcached if you prefer. Requires additional dependencies.

tardis.default_settings.celery_settings module

tardis.default_settings.custom_views module

```
tardis.default_settings.custom_views.DATASET_VIEWS = []
```

Dataset view overrides ('contextual views') are specified as tuples mapping a Schema namespace to a class-based view (or view function). See: https://mytardis.readthedocs.io/en/develop/apps/contextual_views.html#dataset-and-experiment-views

e.g.:

```
DATASET_VIEWS = [
    ('http://example.org/schemas/dataset/my_awesome_schema',
     'tardis.apps.my_awesome_app.views.CustomDatasetViewSubClass'),
]
```

```
tardis.default_settings.custom_views.EXPERIMENT_VIEWS = []
```

Experiment view overrides ('contextual views') are specified as tuples mapping a Schema namespace to a class-based view (or view function). See: https://mytardis.readthedocs.io/en/develop/apps/contextual_views.html#dataset-and-experiment-views

e.g.:

```
EXPERIMENT_VIEWS = [
    ('http://example.org/schemas/expt/my_awesome_schema',
     'tardis.apps.my_awesome_app.views.CustomExptViewSubclass'),
]
```

`tardis.default_settings.custom_views.INDEX_VIEWS = {}`

A custom index page override is defined in as dictionary mapping a class-based view (or view function) to a Django Site, specified by SITE_ID (an integer) or the domain name of the incoming request. See: https://mytardis.readthedocs.io/en/develop/apps/contextual_views.html#custom-index-view

e.g.:

```
INDEX_VIEWS = {
    1: 'tardis.apps.my_custom_app.views.MyCustomIndexSubclass',
    'store.example.com': 'tardis.apps.myapp.AnotherCustomIndexSubclass'
}
```

`tardis.default_settings.custom_views.LOGIN_VIEWS = {}`

A custom login page override is defined in as dictionary mapping a class-based view (or view function) to a Django Site, specified by SITE_ID (an integer) or the domain name of the incoming request. See: https://mytardis.readthedocs.io/en/develop/apps/contextual_views.html#custom-login-view

e.g.:

```
LOGIN_VIEWS = {
    1: 'tardis.apps.my_custom_app.views.MyCustomLoginSubclass',
    'store.example.com': 'tardis.apps.myapp.AnotherCustomLoginSubclass'
}
```

tardis.default_settings.database module

tardis.default_settings.debug module

`tardis.default_settings.debug.ALLOWED_HOSTS = ['*']`

For security reasons this needs to be set to your hostname and/or IP address in production.

`tardis.default_settings.debug.DEBUG = True`

Set to false for production use

`tardis.default_settings.debug.INTERNAL_IPS = ('127.0.0.1',)`

A list of IP addresses, as strings, that: Allow the debug() context processor to add some variables to the template context.

tardis.default_settings.downloads module

`tardis.default_settings.downloads.DEFAULT_ARCHIVE_FORMATS = ['tar']`

Site's preferred archive types, with the most preferred first other available option: 'tgz'. Add to list if desired

tardis.default_settings.email module

`tardis.default_settings.email.DEFAULT_FROM_EMAIL = 'webmaster@localhost'`

This can be set as : "MyTardis Admins <admins@mytardis.org>"

`tardis.default_settings.email.EMAIL_HOST = 'localhost'`

Set this to your local SMTP server, e.g. ‘smtp.example.edu’ or to a remote SMTP server, e.g. ‘smtp.gmail.com’

`tardis.default_settings.email.EMAIL_HOST_PASSWORD = ''`

When using a local SMTP server, you probably don’t need to authenticate, so you can leave this blank.

If using a remote SMTP server, this can be set to the password used to authenticate.

`tardis.default_settings.email.EMAIL_HOST_USER = ''`

When using a local SMTP server, you probably don’t need to authenticate, so you can leave this blank.

If using a remote SMTP server, this can be set to the email address used to authenticate, e.g. ‘bob@bobmail.com’

`tardis.default_settings.email.EMAIL_PORT = 25`

Some SMTP servers require a different port, e.g. 587. Django’s default value for this setting is 25.

`tardis.default_settings.email.EMAIL_USE_TLS = False`

Some SMTP servers require this to be set to True. Django’s default value for this setting is False.

`tardis.default_settings.filters module`

`tardis.default_settings.frontend module`

`tardis.default_settings.frontend.BLEACH_ALLOWED_ATTRIBUTES = {'a': ['href', 'title'], 'ab`

These are the default bleach values and shown here as an example.

`tardis.default_settings.frontend.BLEACH_ALLOWED_TAGS = ['a', 'abbr', 'acronym', 'b', 'blockc`

These are the default bleach values and shown here as an example.

`tardis.default_settings.i18n module`

`tardis.default_settings.localisation module`

`tardis.default_settings.logging module`

`tardis.default_settings.middlewares module`

`tardis.default_settings.publication module`

`tardis.default_settings.search module`

`tardis.default_settings.sharing module`

`tardis.default_settings.site_customisations module`

`tardis.default_settings.site_customisations.SITE_TITLE = 'MyTardis'`

customise the title of your site

`tardis.default_settings.site_customisations.SPONSORED_TEXT = None`

add text to the footer to acknowledge someone

tardis.default_settings.static_files module

tardis.default_settings.storage module

tardis.default_settings.storage.**METADATA_STORE_PATH** = '/home/docs/checkouts/readthedocs.org/storage path for image paths stored in parameters. Better to set to another location if possible

tardis.default_settings.templates module

tardis.default_settings.uploads module

tardis.default_settings.uploads.**UPLOAD_METHOD = False**

Old version: UPLOAD_METHOD = "uploadify". This can be changed to an app that provides an upload_button function, eg. "tardis.apps.filepicker.views.upload_button" to use a fancy commercial uploader. To use filepicker, please also get an API key at <http://filepicker.io>

tardis.default_settings.urls module

Module contents

```

Module contents

[tardis.tardis_portal package](#)

Subpackages

[tardis.tardis_portal.auth package](#)

Submodules

[tardis.tardis_portal.auth.authentication module](#)

A module containing helper methods for the manage_auth_methods function in views.py.

```
tardis.tardis_portal.auth.authentication.add_auth_method(request)
```

Add a new authentication method to request.user's existing list of authentication methods. This method will ask for a confirmation if the user wants to merge two accounts if the authentication method he provided already exists as a method for another user.

Parameters `request` (`Request`) – the HTTP request object

Returns The `HttpResponse` which contains `request.user`'s new list of authentication methods

Return type `HttpResponse`

```
tardis.tardis_portal.auth.authentication.edit_auth_method(request)
```

Change the local DB (Django) password for `request.user`.

```
tardis.tardis_portal.auth.authentication.list_auth_methods(request)
```

Generate a list of authentication methods that `request.user` uses to authenticate to the system and send it back in a `HttpResponse`.

Parameters `request` (`Request`) – the HTTP request object

Returns The `HttpResponse` which contains `request.user`'s list of authentication methods

Return type `HttpResponse`

```
tardis.tardis_portal.auth.authentication.merge_auth_method(request)
```

Merge the account that the user is logged in as and the account that he provided in the Authentication Form. Merging accounts involve relinking the `UserAuthentication` table entries, transferring `ObjectACL` entries to the merged account, changing the Group memberships and deleting the unneeded account.

Parameters `request` (`Request`) – the HTTP request object

Returns The `HttpResponse` which contains `request.user`'s new list of authentication methods

Return type `HttpResponse`

```
tardis.tardis_portal.auth.authentication.remove_auth_method(request)
```

Removes the non-local DB auth method from the `UserAuthentication` model.

Parameters `request` (`Request`) – the HTTP request object

Returns The `HttpResponse` which contains `request.user`'s new list of authentication methods

Return type HttpResponse

tardis.tardis_portal.auth.authorisation module

Object-level authorisation backend

```
class tardis.tardis_portal.auth.authorisation.ACIAwareBackend
Bases: object

app_label = 'tardis_acls'

authenticate(request)
    do not use this backend for authentication

get_perm_bool(verb)
    relates ACLs to permissions

has_perm(user_obj, perm, obj=None)
    main method, calls other methods based on permission type queried

supports_anonymous_user = True
supports_object_permissions = True
```

tardis.tardis_portal.auth.authservice module

models.py

```
class tardis.tardis_portal.auth.authservice.AuthService(settings=<LazySettings
                                                       "tardis.test_settings">)

The AuthService provides an interface for querying the auth(nlz) framework within MyTardis. The auth service works by reading the class path to plugins from the settings file.
```

Parameters `settings` (django.conf.settings) – the settings object that contains the list of user and group plugins.

`authenticate(authMethod, **credentials)`

Try and authenticate the user using the auth type he/she specified to use and if authentication didn't work using that

Parameters

- `authMethod` (string) – the shortname of the auth method.
- `credentials` (kwargs) – the credentials as expected by the auth plugin

Returns authenticated User or None

Return type User or None

`getGroups(user)`

Parameters `user` (User) – User

Returns a list of tuples containing pluginname and group id

Return type list

`getGroupsForEntity(entity)`

Return a list of the groups an entity belongs to

Parameters `entity` (string) – the entity to search for, user or group.

Returns groups

Return type Group

The groups will be returned as a list similar to:

```
[{'name': 'Group 456', 'id': '2'},  
 {'name': 'Group 123', 'id': '1'}]
```

getUser (authMethod, user_id, force_user_create=False)

Return a user model based on the given auth method and user id.

This function is responsible for creating the user within the Django DB and returning the resulting user model.

getUsernameByEmail (authMethod, email)

Return a username given the auth method and email address of a user.

get_or_create_user (user_obj_or_dict, authMethod=None)

refactored out for external use by AAF and possibly others

searchEntities (filter)

Return a list of users and/or groups

searchGroups (**kw)

basestring id: the value of the id to search for basestring name: the value of the displayname to search for int max_results: the maximum number of elements to return basestring sort_by: the attribute the users should be sorted on basestring plugin: restrict the search to the specific group provider

returns: a list of users and/or groups rtype: list

searchUsers (filter)

Return a list of users and/or groups

tardis.tardis_portal.auth.decorators module

tardis.tardis_portal.auth.decorators.**datafile_access_required**(f)

tardis.tardis_portal.auth.decorators.**dataset_access_required**(f)

tardis.tardis_portal.auth.decorators.**dataset_download_required**(f)

tardis.tardis_portal.auth.decorators.**dataset_write_permissions_required**(f)

tardis.tardis_portal.auth.decorators.**delete_permissions_required**(f)

tardis.tardis_portal.auth.decorators.**experiment_access_required**(f)

tardis.tardis_portal.auth.decorators.**experiment_download_required**(f)

tardis.tardis_portal.auth.decorators.**experiment_ownership_required**(f)

A decorator for Django views that validates if a user is an owner of an experiment or ‘superuser’ prior to further processing the request. Unauthenticated requests are redirected to the login page. If the user making the request satisfies none of these criteria, an error response is returned.

Parameters f (types.FunctionType) – A Django view function

Returns A Django view function

Return type types.FunctionType

tardis.tardis_portal.auth.decorators.**get_accessible_datafiles_for_user**(request)

tardis.tardis_portal.auth.decorators.**get_accessible_experiments**(request)

```
tardis.tardis_portal.auth.decorators.get_accessible_experiments_for_dataset(request,
                                                                           dataset_id)
```

```
tardis.tardis_portal.auth.decorators.get_owned_experiments(request)
```

```
tardis.tardis_portal.auth.decorators.get_shared_experiments(request)
```

```
tardis.tardis_portal.auth.decorators.group_ownership_required(f)
```

A decorator for Django views that validates if a user is a group admin or ‘superuser’ prior to further processing the request. Unauthenticated requests are redirected to the login page. If the user making the request satisfies none of these criteria, an error response is returned.

Parameters `f` (`types.FunctionType`) – A Django view function

Returns A Django view function

Return type `types.FunctionType`

```
tardis.tardis_portal.auth.decorators.has_datafile_access(request, datafile_id)
```

```
tardis.tardis_portal.auth.decorators.has_datafile_download_access(request,
                                                                datafile_id)
```

```
tardis.tardis_portal.auth.decorators.has_dataset_access(request, dataset_id)
```

```
tardis.tardis_portal.auth.decorators.has_dataset_download_access(request,

```

Check whether the user has read access to the experiment - this means either they have been granted read access, or that they are the owner.

NOTE: This does not check whether the experiment is public or not, which means even when the experiment is public, this method does not automatically return true.

As such, this method should NOT be used to check whether the user has general read permission.

```
tardis.tardis_portal.auth.decorators.has_write_permissions(request,      experi-
                                                               ment_id)

tardis.tardis_portal.auth.fix_circular module

```
tardis.tardis_portal.auth.fix_circular.getGroups(user)
```

tardis.tardis_portal.auth.interfaces module

```
class tardis.tardis_portal.auth.interfaces.AuthProvider
```

```
    authenticate(request)
```

from a request authenticate try to authenticate the user. return a user dict if successful.

```
    getUsernameByEmail(email)
```

returns the username (format string) from the auth domain

Implementing this function is optional- it is needed for resolving experiment owner email addresses to usernames during ingestion.

```
    get_user(user_id)
```

```
class tardis.tardis_portal.auth.interfaces.GroupProvider
```

```
    getGroupById(id)
```

return the group associated with the id

```
    getGroups(user)
```

return an iteration of the available groups.

```
    getGroupsForEntity(id)
```

return a list of groups associated with a particular entity id

```
    searchGroups(**filter)
```

return a list of groups that match the filter

```
class tardis.tardis_portal.auth.interfaces.UserProvider
```

```
    getUserById(id)
```

return the user dictionary in the format of:

```
{ "id": 123,  
  "first_name": "John",  
  "last_name": "Smith",  
  "email": "john@example.com" }
```

```
    getUsernameByEmail(email)
```

returns the username (format string) from the auth domain needed for resolving experiment owners during ingestion

```
    searchUsers(**filter)
```

return a list of user descriptions from the auth domain.

each user is in the format of:

```
{ "id": 123,  
  "first_name": "John",  
  "last_name": "Smith",  
  "email": "john@example.com" }
```

tardis.tardis_portal.auth.ldap_auth module**tardis.tardis_portal.auth.localdb_auth module**

Local DB Authentication module.

```
class tardis.tardis_portal.auth.localdb_auth.DjangoAuthBackend
Bases: tardis.tardis_portal.auth.interfacesAuthProvider
```

Authenticate against Django's Model Backend.

```
authenticate(request)
```

authenticate a user, this expect the user will be using form based auth and the *username* and *password* will be passed in as **POST** variables.

Parameters `request` (`django.http.HttpRequest`) – a HTTP Request instance

Returns authenticated User

Return type User

```
get_user(user_id)
```

```
class tardis.tardis_portal.auth.localdb_auth.DjangoGroupProvider
```

Bases: tardis.tardis_portal.auth.interfaces.GroupProvider

```
getGroupById(id)
```

return the group associated with the id:

```
{"id": 123,
```

“display”: “Group Name”,}

```
getGroups(user)
```

return an iteration of the available groups.

```
name = u'django_group'
```

```
searchGroups(**filter)
```

```
class tardis.tardis_portal.auth.localdb_auth.DjangoUserProvider
```

Bases: tardis.tardis_portal.auth.interfaces.Provider

```
getUserById(id)
```

return the user dictionary in the format of:

```
{"id": 123,
"first_name": "John",
"last_name": "Smith",
"email": "john@example.com"}
```

```
name = u'django_user'
```

tardis.tardis_portal.auth.token_auth module

token authentication module

```
class tardis.tardis_portal.auth.token_auth.TokenAuthMiddleware(get_response)
Bases: object
```

adds tokens to the user object and the session from a GET query

```
process_request (request)

class tardis.tardis_portal.auth.token_auth.TokenGroupProvider
    Bases: tardis.tardis_portal.auth.interfaces.GroupProvider

    Transforms tokens into auth groups

    getGroups (user)
        name = u'token_group'

    searchGroups (**kwargs)
        return nothing because these are not groups in the standard sense
```

tardis.tardis_portal.auth.utils module

Created on 15/03/2011

@author: gerson

```
tardis.tardis_portal.auth.utils.configure_user (user)
    Configure a user account that has just been created by adding the user to the default groups and marking it as a
    not a Django account.
```

Parameters `user` (`User`) – the User instance for the newly created account

Returns User profile for user

Return type `UserProfile`

```
tardis.tardis_portal.auth.utils.create_user (auth_method, user_id, email=’)
```

```
tardis.tardis_portal.auth.utils.get_or_create_user (auth_method, user_id, email=’)
```

Module contents

tardis.tardis_portal.models package

Submodules

tardis.tardis_portal.models.access_control module

```
class tardis.tardis_portal.models.access_control.GroupAdmin(*args, **kwargs)
Bases: django.db.models.base.Model
```

GroupAdmin links the Django User and Group tables for group administrators

Attribute user a foreign key to the `django.contrib.auth.models.User`

Attribute group a foreign key to the `django.contrib.auth.models.Group`

exception DoesNotExist

Bases: `django.core.exceptions.ObjectDoesNotExist`

exception MultipleObjectsReturned

Bases: `django.core.exceptions.MultipleObjectsReturned`

group

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

group_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
objects = <django.db.models.manager.Manager object>
```

user

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

user_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
class tardis.tardis_portal.models.access_control.ObjectACL(*args, **kwargs)
Bases: django.db.models.base.Model
```

The ObjectACL (formerly ExperimentACL) table is the core of the Tardis Authorisation framework

Attribute pluginId the name of the auth plugin being used

Attribute entityId a foreign key to auth plugins

Attribute object_type a foreign key to ContentType

Attribute object_id the primary key/id of the object_type

Attribute canRead gives the user read access

Attribute canWrite gives the user write access

Attribute canDelete gives the user delete permission

Attribute isOwner the experiment owner flag.

Attribute effectiveDate the date when access takes into effect

Attribute expiryDate the date when access ceases

Attribute aclOwnershipType system-owned or user-owned.

System-owned ACLs will prevent users from removing or editing ACL entries to a particular experiment they own. User-owned ACLs will allow experiment owners to remove/add/edit ACL entries to the experiments they own.

exception DoesNotExist

Bases: django.core.exceptions.ObjectDoesNotExist

exception MultipleObjectsReturned

Bases: django.core.exceptions.MultipleObjectsReturned

OWNER OWNED = 1

SYSTEM OWNED = 2

aclOwnershipType

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

canDelete

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

canRead

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

canWrite

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

content_object

Provide a generic many-to-one relation through the `content_type` and `object_id` fields.

This class also doubles as an accessor to the related object (similar to `ForwardManyToOneDescriptor`) by adding itself as a model attribute.

content_type

Accessor to the related object on the forward side of a many-to-one or one-to-one (via `ForwardOneToOneDescriptor` subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

content_type_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

effectiveDate

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

entityId

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

expiryDate

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

get_aclOwnershipType_display(morekwargs)****classmethod get_effective_query()****get_related_object()**

If possible, resolve the pluginId/entityId combination to a user or group object.

get_related_object_group()

If possible, resolve the pluginId/entityId combination to a user or group object.

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

isOwner

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

object_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
objects = <django.db.models.manager.Manager object>
```

openidaclmigration_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

pluginId

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
class tardis.tardis_portal.models.access_control.UserAuthentication(id, user-
Profile,
user-
name,
authen-
tication-
Method,
ap-
proved)
```

Bases: django.db.models.base.Model

```
CHOICES = ()
```

```
exception DoesNotExist
```

Bases: django.core.exceptions.ObjectDoesNotExist

```
exception MultipleObjectsReturned
```

Bases: django.core.exceptions.MultipleObjectsReturned

```
approved
```

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
authenticationMethod
```

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
getAuthMethodDescription()
```

```
id
```

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
objects = <django.db.models.manager.Manager object>
```

save (*args, **kwargs)

userProfile

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

userProfile_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

username

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

class tardis.tardis_portal.models.access_control.**UserProfile** (*args, **kwargs)

Bases: django.db.models.base.Model

UserProfile class is an extension to the Django standard user model.

Attribute isDjangoAccount is the user a local DB user

Attribute user a foreign key to the django.contrib.auth.models.User

exception DoesNotExist

Bases: django.core.exceptions.ObjectDoesNotExist

exception MultipleObjectsReturned

Bases: django.core.exceptions.MultipleObjectsReturned

ext_groups

getUserAuthentications()

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

isDjangoAccount

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

isValidPublicContact()

Checks if there's enough information on the user for it to be used as a public contact.

Note: Last name can't be required, because people don't necessarily have a last (or family) name.

objects = <django.db.models.manager.Manager object>

rapidConnectEduPersonTargetedID

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

user

Accessor to the related object on the forward side of a one-to-one relation.

In the example:

```
class Restaurant(Model):
    place = OneToOneField(Place, related_name='restaurant')
```

restaurant.place is a ForwardOneToOneDescriptor instance.

user_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

userauthentication_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

```
tardis.tardis_portal.models.access_control.create_user_api_key(sender,
                                                               **kwargs)
```

Auto-create ApiKey objects using Tastypie's `create_api_key`

```
tardis.tardis_portal.models.access_control.create_user_profile(sender, instance, created,
                                                               **kwargs)
```

tardis.tardis_portal.models.datafile module

```
class tardis.tardis_portal.models.datafile.DataFile(*args, **kwargs)
Bases: django.db.models.base.Model
```

A DataFile is a record of a file which includes its filename, its size in bytes, its relative directory, and various other meta-data. Each DataFile belongs to a `Dataset` which usually represents the files from one folder on an instrument PC.

The physical copy (or copies) of a file are described by distinct `DataFileObject` records.

Attribute dataset The foreign key to the `tardis.tardis_portal.models.Dataset` the file belongs to.

Attribute filename The name of the file, excluding the path.

Attribute size The size of the file.

Attribute created_time Should be populated with the file's creation time from the instrument PC.

Attribute modification_time Should be populated with the file's last modification time from the instrument PC.

Attribute mimetype For example 'application/pdf'

Attribute md5sum Digest of length 32, containing only hexadecimal digits

Attribute sha512sum Digest of length 128, containing only hexadecimal digits

exception DoesNotExist

Bases: `django.core.exceptions.ObjectDoesNotExist`

exception MultipleObjectsReturned

Bases: `django.core.exceptions.MultipleObjectsReturned`

cache_file()

created_time

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

datafileparameterset_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

dataset

Accessor to the related object on the forward side of a many-to-one or one-to-one (via `ForwardOneToOneDescriptor` subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

dataset_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

deleted

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

deleted_time

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

directory

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

file_object

file_objects

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

filename

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

getParameterSets()

Return datafile parametersets associated with this datafile.

get_absolute_filepath()**get_as_temporary_file(**kwd)**

Returns a traditional file-system-based file object that is a copy of the original data. The file is deleted when the context is destroyed.

Parameters `directory` (`basestring`) – the directory in which to create the temp file

Returns the temporary file object

Return type NamedTemporaryFile

get_default_storage_box()

try to guess appropriate box from files, dataset or experiment

get_download_url()**get_file(verified_only=True)**

Returns the file as a readable file-like object from the best available storage box.

If verified_only=False, the return of files without a verified checksum is allowed, otherwise None is returned for unverified files.

Parameters `verified_only` (`bool`) – if False return files without verified checksums

Returns Python file object

Return type Python File object

get_image_data()**get_mimetype()****get_preferred_dfo(verified_only=True)****get_receiving_storage_box()****get_size()****get_view_url()****has_image()****id**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

is_image()

returns True if it's an image and not an x-icon and not an img the image/img mimetype is made up though and may need revisiting if there is an official img mimetype that does not refer to diffraction images

is_local()**is_online**

return False if a file is on tape. At this stage it checks it returns true for no file objects, because those files are offline through other checks

is_public()

md5sum

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

mimetype

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

modification_time

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

objects = <django.db.models.manager.Manager object>**save(*args, **kwargs)****sha512sum**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

size

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

status

returns information about the status of the file. States are defined in StorageBox

classmethod sum_sizes(datafiles)

Takes a query set of datafiles and returns their total size.

update_mimetype(mimetype=None, force=False, save=True)**verified****verify(reverify=False)****version**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

class tardis.tardis_portal.models.datafile.DataFileObject(*args, **kwargs)
Bases: django.db.models.base.Model

The physical copy (or copies) of a *DataFile* are described by distinct *DataFileObject* records.

Attribute datafile The *DataFile* record which this DataFileObject is storing a copy of.

Attribute storage_box The *StorageBox* containing this copy of the file. The StorageBox could represent a directory on a mounted filesystem, or a bucket in an Object Store.

Attribute uri The relative path of the file location within the the *StorageBox*, e.g. dataset1-12345/file1.txt for a copy of a *DataFile* with filename file1.txt which belongs to a *Dataset* with a description of dataset1 and an ID of 12345.

exception DoesNotExist

Bases: django.core.exceptions.ObjectDoesNotExist

exception MultipleObjectsReturned

Bases: django.core.exceptions.MultipleObjectsReturned

cache_file()**copy_file(dest_box=None, verify=True)**

copies verified file to new storage box checks for existing copy triggers async verification if not disabled

:param StorageBox dest_box: StorageBox instance :param bool verify: :returns: DataFileObject of copy
 :rtype: DataFileObject

create_set_uri (*force=False, save=False*)

sets the uri as well as building it :param bool force: :param bool save: :return: :rtype: basestring

created_time

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

datafile

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

datafile_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

delete_data()

file_object

A set of accessor functions that convert the file information to a standard Python file object for reading and copy the contents of an existing file_object into the storage backend.

Returns a file object

Return type Python File object

get_full_path()

get_next_by_created_time (**morekwargs)

get_previous_by_created_time (**morekwargs)

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

last_verified_time

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

modified_time

move_file (*dest_box=None*)

moves a file copies first, then synchronously verifies deletes file if copy is true copy and has been verified

Parameters **dest_box** (`StorageBox`) – StorageBox instance

Returns moved file dfo

Return type `DataFileObject`

objects = <`django.db.models.manager.Manager` object>

priority

Default priority for tasks which take this DFO as an argument

save (*args, **kwargs)

storage_box

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

storage_box_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

storage_type

Returns storage_box type

Return type StorageBox type constant

uri

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

verified

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

verify (add_checksums=True, add_size=True)

```
tardis.tardis_portal.models.datafile.compute_checksums(file_object,
                                                       compute_md5=True,
                                                       compute_sha512=True,
                                                       close_file=True)
```

Computes checksums for a python file object

Parameters

- **file_object** (*object*) – Python File object
- **compute_md5** (*bool*) – whether to compute md5 default=True
- **compute_sha512** (*bool*) – whether to compute sha512, default=True
- **close_file** (*bool*) – whether to close the file_object, default=True

Returns the checksums as {‘md5sum’: result, ‘sha512sum’: result}

Return type dict

```
tardis.tardis_portal.models.datafile.delete_dfo(sender, instance, **kwargs)
```

Deletes the actual file / object, before deleting the database record

tardis.tardis_portal.models.dataset module

class tardis.tardis_portal.models.dataset.Dataset (*args, **kwargs)

Bases: django.db.models.base.Model

A dataset represents a collection files usually associated with a folder on an instrument PC. Each file within the dataset is represented by a tardis.tardis_portal.models.DataFile record. A dataset can appear

in one or more *Experiment* records. Access controls are configured at the Experiment level by creating *ObjectACL* records. Each dataset can be associated with an *Instrument* record, but it is possible to create a dataset without specifying an instrument.

Attribute experiment A foreign key to the one ore more *Experiment* records which contain this dataset

Attribute instrument The foreign key to the instrument that generated this data

Attribute description Description of this dataset, which usually corresponds to the folder name on the instrument PC

Attribute immutable Whether this dataset is read-only

exception DoesNotExist

Bases: `django.core.exceptions.ObjectDoesNotExist`

exception MultipleObjectsReturned

Bases: `django.core.exceptions.MultipleObjectsReturned`

created_time

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

datafile_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

datasetparameterset_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

description

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

directory

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

equipment_set

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

experiments

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

getParameterSets()

Return the dataset parametersets associated with this experiment.

get_absolute_url(kwargs)**

Return the absolute url to the current Dataset

get_all_storage_boxes_used()

get_datafiles()

get_download_urls()

get_edit_url(kwargs)**

Return the absolute url to the edit view of the current Dataset

get_first_experiment()

get_images()

get_path()

get_size()

get_thumbnail_url()

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

image

immutable

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

instrument

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

instrument_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

is_online**modified_time**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
objects = <tardis.tardis_portal.managers.OracleSafeManager object>
```

```
save(force_insert=False, force_update=False, using=None, update_fields=None)
```

tardis.tardis_portal.models.experiment module

```
class tardis.tardis_portal.models.experiment.Experiment(*args, **kwargs)
```

Bases: django.db.models.base.Model

An Experiment is a collection of *Dataset* records. A *Dataset* record can appear in multiple Experiment records. Access controls are configured at the Experiment level by creating *ObjectACL* records.

Attribute url An optional URL associated with the data collection

Attribute approved An optional field indicating whether the collection is approved

Attribute title The title of the experiment.

Attribute description The description of the experiment.

Attribute institution_name The name of the institution who created the experiment.

Attribute start_time Undocumented

Attribute end_time Undocumented

Attribute created_time Undocumented

Attribute handle Undocumented

Attribute public Whether the experiment is publicly accessible

Attribute objects Default model manager

Attribute safe ACL aware model manager

exception DoesNotExist

Bases: django.core.exceptions.ObjectDoesNotExist

exception MultipleObjectsReturned

Bases: django.core.exceptions.MultipleObjectsReturned

```
PUBLICATION_DETAILS_SCHEMA = 'http://www.tardis.edu.au/schemas/publication/details/'

```

```
PUBLIC_ACCESS_EMBARGO = 25
```

```
PUBLIC_ACCESS_FULL = 100
```

PUBLIC_ACCESS_METADATA = 50

PUBLIC_ACCESS_NONE = 1

approved

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

created_by

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

created_by_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

created_time

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

datasets

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

description

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

end_time

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

experimentauthor_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

experimentparameterset_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

getParameterSets()

Return the experiment parametersets associated with this experiment.

get_absolute_url(kwargs)**

Return the absolute url to the current Experiment

get_create_token_url(kwargs)**

Return the absolute url to the create token view of the current Experiment

get_ct()**get_datafiles()****get_download_urls()****get_edit_url(**kwargs)**

Return the absolute url to the edit view of the current Experiment

get_groups()**get_images()****get_next_by_created_time(**morekwargs)****get_next_by_update_time(**morekwargs)****get_or_create_directory()****get_owners()****get_previous_by_created_time(**morekwargs)****get_previous_by_update_time(**morekwargs)****get_public_access_display(**morekwargs)****get_size()****handle**

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

institution_name

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

is_publication()**is_publication_draft()**

license

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

license_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

locked

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

objectacl

Accessor to the related objects manager on the one-to-many relation created by GenericRelation.

In the example:

```
class Post(Model):
    comments = GenericRelation(Comment)
```

post.comments is a ReverseGenericManyToOneDescriptor instance.

objects = <tardis.tardis_portal.managers.OracleSafeManager object>

public_access

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

classmethod public_access_implies_distribution(public_access_level)

Determines if a level of public access implies that distribution should be allowed, or alternately if it should not be allowed. Used to prevent free-distribution licences for essentially private data, and overly-restrictive licences for public data.

public_download_allowed()

instance method version of ‘public_access_implies_distribution’

safe = <tardis.tardis_portal.managers.ExperimentManager object>

save(*args, **kwargs)

start_time

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

title

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

token_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

`update_time`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`url`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
class tardis.tardis_portal.models.experiment.ExperimentAuthor(id, experiment,
                                                               author, institution, email, order,
                                                               url)
```

Bases: `django.db.models.base.Model`

`exception DoesNotExist`

Bases: `django.core.exceptions.ObjectDoesNotExist`

`exception MultipleObjectsReturned`

Bases: `django.core.exceptions.MultipleObjectsReturned`

`author`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`email`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`experiment`

Accessor to the related object on the forward side of a many-to-one or one-to-one (via `ForwardOneToOneDescriptor` subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

`experiment_id`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`id`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`institution`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
objects = <django.db.models.manager.Manager object>
```

`order`

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
save(*args, **kwargs)
```

url

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

tardis.tardis_portal.models.facility module

class `tardis.tardis_portal.models.facility.Facility(*args, **kwargs)`

Bases: `django.db.models.base.Model`

Represents a facility that produces data.

Each `Instrument` record must belong to exactly one facility. Many `Instrument` records can be associated with the same facility.

Attribute name The name of the facility, e.g. “Test Facility”

Attribute manager_group The group of users who can access the Facility Overview for this facility.

exception DoesNotExist

Bases: `django.core.exceptions.ObjectDoesNotExist`

exception MultipleObjectsReturned

Bases: `django.core.exceptions.MultipleObjectsReturned`

created_time

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

instrument_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

manager_group

Accessor to the related object on the forward side of a many-to-one or one-to-one (via `ForwardOneToOneDescriptor` subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

manager_group_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

modified_time

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

name

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
objects = <django.db.models.manager.Manager object>
```

```
save(*args, **kwargs)
```

```
tardis.tardis_portal.models.facility.facilities_managed_by(user)
```

Returns a list of facilities managed by a user

```
tardis.tardis_portal.models.facility.is_facility_manager(user)
```

Returns true if the user manages one or more facilities

tardis.tardis_portal.models.hooks module

```
tardis.tardis_portal.models.hooks.post_save_experiment(sender, **kwargs)
```

```
tardis.tardis_portal.models.hooks.post_save_experiment_parameter(sender,  
**kwargs)
```

```
tardis.tardis_portal.models.hooks.post_save_experimentauthor(sender, **kwargs)
```

```
tardis.tardis_portal.models.hooks.publish_public_expt_rifcs(experiment)
```

tardis.tardis_portal.models.instrument module

```
class tardis.tardis_portal.models.instrument.Instrument(*args, **kwargs)
```

Bases: django.db.models.base.Model

Represents an instrument belonging to a facility that produces data

exception DoesNotExist

Bases: django.core.exceptions.ObjectDoesNotExist

exception MultipleObjectsReturned

Bases: django.core.exceptions.MultipleObjectsReturned

created_time

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

dataset_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):  
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

facility

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

facility_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

getParameterSets()

Return the instrument parametersets associated with this instrument.

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

instrumentparameterset_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

modified_time

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

name

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

objects = <`django.db.models.manager.Manager` object>

save(*args, **kwargs)

tardis.tardis_portal.models.jti module

class `tardis.tardis_portal.models.jti.JTI`(*id, jti, created_time*)

Bases: `django.db.models.base.Model`

exception DoesNotExist

Bases: `django.core.exceptions.ObjectDoesNotExist`

exception MultipleObjectsReturned

Bases: `django.core.exceptions.MultipleObjectsReturned`

created_time

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```

get_next_by_created_time(**morekwargs)
get_previous_by_created_time(**morekwargs)

id
    A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

jti
    A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

objects = <django.db.models.manager.Manager object>

```

tardis.tardis_portal.models.license module

```

class tardis.tardis_portal.models.license.License(*args, **kwargs)
Bases: django.db.models.base.Model

```

Represents a licence for experiment content.

Instances should provide enough detail for both researchers to select the licence, and for the users of their data to divine correct usage of experiment content.

(Non-US developers: We're using US spelling in the code.)

exception DoesNotExist

Bases: django.core.exceptions.ObjectDoesNotExist

exception MultipleObjectsReturned

Bases: django.core.exceptions.MultipleObjectsReturned

allows_distribution

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

experiment_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```

class Child(Model):
    parent = ForeignKey(Parent, related_name='children')

```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

classmethod get_none_option_license()

classmethod get_suitable_licenses(public_access_method=None)

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

image_url

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

internal_description

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

is_active

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

name

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

objects = <django.db.models.manager.Manager object>

url

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

tardis.tardis_portal.models.parameters module

```
class tardis.tardis_portal.models.parameters.DatafileParameter(id, name,
                                                               string_value,
                                                               numeri-
                                                               cal_value,
                                                               datetime_value,
                                                               link_id, link_ct,
                                                               parameterset)
```

Bases: *tardis.tardis_portal.models.parameters.Parameter*

exception DoesNotExist

Bases: *django.core.exceptions.ObjectDoesNotExist*

exception MultipleObjectsReturned

Bases: *django.core.exceptions.MultipleObjectsReturned*

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

link_ct

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

link_gfk

Provide a generic many-to-one relation through the `content_type` and `object_id` fields.

This class also doubles as an accessor to the related object (similar to `ForwardManyToOneDescriptor`) by adding itself as a model attribute.

name

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

parameter_type = 'Datafile'

parameterset

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

parameterset_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
class tardis.tardis_portal.models.parameters.DatafileParameterSet(id, schema,
                                                                datafile)
```

Bases: `tardis.tardis_portal.models.parameters.ParameterSet`

exception DoesNotExist

Bases: `django.core.exceptions.ObjectDoesNotExist`

exception MultipleObjectsReturned

Bases: `django.core.exceptions.MultipleObjectsReturned`

datafile

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

datafile_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

datafileparameter_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
objects = <django.db.models.manager.Manager object>
```

parameter_class

alias of [DatafileParameter](#)

schema

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

storage_box

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

pizza.toppings and topping.pizzas are ManyToManyDescriptor instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

```
class tardis.tardis_portal.models.parameters.DatasetParameter(id, name,
                                                               string_value,
                                                               numerical_value,
                                                               datetime_value,
                                                               link_id, link_ct,
                                                               parameterset)

Bases: tardis.tardis_portal.models.parameters.Parameter
```

exception DoesNotExist

Bases: [django.core.exceptions.ObjectDoesNotExist](#)

exception MultipleObjectsReturned

Bases: [django.core.exceptions.MultipleObjectsReturned](#)

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

link_ct

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

link_gfk

Provide a generic many-to-one relation through the `content_type` and `object_id` fields.

This class also doubles as an accessor to the related object (similar to `ForwardManyToOneDescriptor`) by adding itself as a model attribute.

name

Accessor to the related object on the forward side of a many-to-one or one-to-one (via `ForwardOneToOneDescriptor` subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

parameter_type = 'Dataset'**parameterset**

Accessor to the related object on the forward side of a many-to-one or one-to-one (via `ForwardOneToOneDescriptor` subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

parameterset_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

class `tardis.tardis_portal.models.parameters.DatasetParameterSet` (`id`, `schema`,
`dataset`)

Bases: `tardis.tardis_portal.models.parameters.ParameterSet`

exception DoesNotExist

Bases: `django.core.exceptions.ObjectDoesNotExist`

exception MultipleObjectsReturned

Bases: `django.core.exceptions.MultipleObjectsReturned`

dataset

Accessor to the related object on the forward side of a many-to-one or one-to-one (via `ForwardOneToOneDescriptor` subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

dataset_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

datasetparameter_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

objects = <`django.db.models.manager.Manager` object>

parameter_class

alias of `DatasetParameter`

schema

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

storage_box

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

pizza.toppings and topping.pizzas are ManyToManyDescriptor instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

```
class tardis.tardis_portal.models.parameters.ExperimentParameter(id, name,
                                                               string_value,
                                                               numeri-
                                                               cal_value,
                                                               date-
                                                               time_value,
                                                               link_id,
                                                               link_ct, pa-
                                                               rameterset)
```

Bases: `tardis.tardis_portal.models.parameters.Parameter`

exception DoesNotExist

exception MultipleObjectsReturned

Bases: `django.core.exceptions.MultipleObjectsReturned`

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

link_ct

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

link_gfk

Provide a generic many-to-one relation through the content_type and object_id fields.

This class also doubles as an accessor to the related object (similar to ForwardManyToOneDescriptor) by adding itself as a model attribute.

name

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

parameter_type = 'Experiment'**parameterset**

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

parameterset_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

save(*args, **kwargs)

```
class tardis.tardis_portal.models.parameters.ExperimentParameterSet(id,
                                                                     schema,
                                                                     experi-
                                                                     ment)
```

Bases: *tardis.tardis_portal.models.parameters.ParameterSet*

exception DoesNotExist

Bases: *django.core.exceptions.ObjectDoesNotExist*

exception MultipleObjectsReturned

Bases: *django.core.exceptions.MultipleObjectsReturned*

experiment

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

experiment_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

experimentparameter_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

`objects = <django.db.models.manager.Manager object>`

parameter_class

alias of `ExperimentParameter`

schema

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

storage_box

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

pizza.toppings and topping.pizzas are ManyToManyDescriptor instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

`class tardis.tardis_portal.models.parameters.FreeTextSearchField(id, parameter_name)`

Bases: `django.db.models.base.Model`

exception DoesNotExist

Bases: `django.core.exceptions.ObjectDoesNotExist`

exception MultipleObjectsReturned
Bases: `django.core.exceptions.MultipleObjectsReturned`

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

objects = <django.db.models.manager.Manager object>

parameter_name

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

parameter_name_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
class tardis.tardis_portal.models.parameters.InstrumentParameter(id, name,
                                                               string_value,

                                                               cal_value,
                                                               date-
                                                               time_value,
                                                               link_id,
                                                               link_ct, pa-
                                                               rameterset)
```

Bases: `tardis.tardis_portal.models.parameters.Parameter`

exception DoesNotExist

Bases: `django.core.exceptions.ObjectDoesNotExist`

exception MultipleObjectsReturned

Bases: `django.core.exceptions.MultipleObjectsReturned`

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

link_ct

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

link_gfk

Provide a generic many-to-one relation through the `content_type` and `object_id` fields.

This class also doubles as an accessor to the related object (similar to `ForwardManyToOneDescriptor`) by adding itself as a model attribute.

name

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

parameter_type = 'Instrument'

parameterset

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

parameterset_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
class tardis.tardis_portal.models.parameters.InstrumentParameterSet(id,
                                                                     schema,
                                                                     instru-
                                                                     ment)
```

Bases: *tardis.tardis_portal.models.parameters.ParameterSet*

exception DoesNotExist

Bases: *django.core.exceptions.ObjectDoesNotExist*

exception MultipleObjectsReturned

Bases: *django.core.exceptions.MultipleObjectsReturned*

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

instrument

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

instrument_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

instrumentparameter_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by create_forward_many_to_many_manager() defined below.

objects = <`django.db.models.manager.Manager` object>

parameter_class

alias of `InstrumentParameter`

schema

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

storage_box

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

pizza.toppings and topping.pizzas are ManyToManyDescriptor instances.

Most of the implementation is delegated to a dynamically defined manager class built by create_forward_many_to_many_manager() defined below.

class tardis.tardis_portal.models.parameters.Parameter(*args, **kwargs)

Bases: `django.db.models.base.Model`

class Meta

abstract = False

app_label = 'tardis_portal'

ordering = ['name']

datetime_value

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

get()

link_ct

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

link_ct_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

link_gfk

Provide a generic many-to-one relation through the content_type and object_id fields.

This class also doubles as an accessor to the related object (similar to ForwardManyToOneDescriptor) by adding itself as a model attribute.

link_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

link_url

name

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

name_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

numerical_value

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

objects

parameter_type = 'Abstract'

set_value(value)

Sets the parameter value, converting into the appropriate data type. Deals with date/time strings that are timezone naive or aware, based on the USE_TZ setting.

Parameters `value` (`basestring`) – a string (or string-like) repr of the value

Raises `SuspiciousOperation` –

string_value

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
class tardis.tardis_portal.models.parameters.ParameterName(id, schema, name,
                                                          full_name, units,
                                                          data_type, immutable,
                                                          comparison_type,
                                                          is_searchable,
                                                          choices, order)
```

choices
    A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.
comparison_type
    A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.
data_type
    A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.
datafileparameter_set
    Accessor to the related objects manager on the reverse side of a many-to-one relation.
```

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by create_forward_many_to_many_manager() defined below.

datasetparameter_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

experimentparameter_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

freetextsearchfield_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

full_name

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
getUniqueShortName()
get_comparison_type_display(**morekwargs)
get_data_type_display(**morekwargs)
```

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

immutable

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

instrumentparameter_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

isDateTime()

isFilename()

isLink()

isLongString()

isNumeric()

isString()

isURL()

is_json()

is_searchable

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

name

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

natural_key()

objects = <tardis.tardis_portal.managers.ParameterNameManager object>

order

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

schema

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

schema_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

units

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
class tardis.tardis_portal.models.parameters.ParameterSet(*args, **kwargs)
Bases: django.db.models.base.Model, tardis.tardis_portal.models.parameters.ParameterSetManagerMixin
```

```

class Meta

    abstract = False
    app_label = 'tardis_portal'
    ordering = ['id']
    parameter_class = None
    save(*args, **kwargs)

```

schema

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```

class Child(Model) :
    parent = ForeignKey(Parent, related_name='children')

```

child.parent is a ForwardManyToOneDescriptor instance.

schema_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

storage_box

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```

class Pizza(Model) :
    toppings = ManyToManyField(Topping, related_name='pizzas')

```

pizza.toppings and topping.pizzas are ManyToManyDescriptor instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

```

class tardis.tardis_portal.models.parameters.ParameterSetManagerMixin(parameterset=None,
    par-
    en-
    tOb-
    ject=None,
    schema=None)

```

Bases: `tardis.tardis_portal.ParameterSetManager`.`ParameterSetManager`

for clarity's sake and for future extension this class makes ParameterSetManager local to this file. At the moment its only function is increasing the line count

```

class tardis.tardis_portal.models.parameters.Schema(id, namespace, name, type, sub-
    type, immutable, hidden)

```

Bases: `django.db.models.base.Model`

Bases: `exceptions.Exception`

datafileparameterset_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

datasetparameterset_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

experimentparameterset_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

get_type_display(morekwargs)**

hidden

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

immutable

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

instrumentparameterset_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by create_forward_many_to_many_manager() defined below.

name

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

namespace

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

natural_key()

```
objects = <tardis.tardis_portal.managers.SchemaManager object>
```

parametername_set

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by create_forward_many_to_many_manager() defined below.

subtype

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

type

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

tardis.tardis_portal.models.storage module

```
class tardis.tardis_portal.models.storage.StorageBox(*args, **kwargs)
```

Bases: django.db.models.base.Model

table that holds storage boxes of any type. to extend to new types, add fields if necessary

CACHE = 3

DISK = 1

```
exception DoesNotExist
    Bases: django.core.exceptions.ObjectDoesNotExist

exception MultipleObjectsReturned
    Bases: django.core.exceptions.MultipleObjectsReturned

TAPE = 2
TEMPORARY = 4
TYPES = {'bundle': 6, 'cache': 3, 'disk': 1, 'receiving': 4, 'tape': 2}
TYPE_UNKNOWN = 5

attributes
```

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

autocache

Whether to automatically copy data into faster storage

Returns True if data should be automatically cached

Return type bool

cache_box

Get cache box if set up

child_boxes

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

parent.children is a ReverseManyToOneDescriptor instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

copy_files(dest_box=None)

copy_to_master()

classmethod create_local_box(location=None)

datafileparametersets

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

datasetparametersets

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

description

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

django_storage_class

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

experimentparametersets

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

file_objects

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

classmethod get_default_storage(location=None, user=None)

gets default storage box or get local storage box with given base location or create one if it doesn't exist.

policies: Have a StorageBoxAttribute: key='default', value=True find a storage box where location is DEFAULT_STORAGE_BASE_DIR create a default storage box at DEFAULT_STORAGE_BASE_DIR lowest id storage box is default no storage box defined, use hard coded default for now TODO: consider removing this

Would be nice: get largest free space one, test for authorisation

get_initialised_storage_instance()

get_options_as_dict()

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

instrumentparametersets

Accessor to the related objects manager on the forward and reverse sides of a many-to-many relation.

In the example:

```
class Pizza(Model):
    toppings = ManyToManyField(Topping, related_name='pizzas')
```

`pizza.toppings` and `topping.pizzas` are `ManyToManyDescriptor` instances.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

master_box

Accessor to the related object on the forward side of a many-to-one or one-to-one (via `ForwardOneToOneDescriptor` subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

master_box_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

max_size

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

move_files(dest_box=None)

move_to_master()

name

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

objects = <django.db.models.manager.Manager object>

offline_types = [2]

online_types = [3, 1, 4, 6]

options

Accessor to the related objects manager on the reverse side of a many-to-one relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`parent.children` is a `ReverseManyToOneDescriptor` instance.

Most of the implementation is delegated to a dynamically defined manager class built by `create_forward_many_to_many_manager()` defined below.

priority

Default priority for tasks which take this box as an argument

status

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

storage_type

```
type_order = [3, 6, 1, 2, 4, 5]
```

```
class tardis.tardis_portal.models.storage.StorageBoxAttribute(*args, **kwargs)
Bases: django.db.models.base.Model
```

Can hold attributes/metadata about different storage locations.

Attribute key The key used to look up the attribute (e.g. “type”).

Attribute value The value of the attribute e.g. “cache”.

The “type” key has three values support by the core MyTardis code: “permanent”, “receiving” and “cache”.

Adding an attribute with key “type” and value “permanent” preserves the default behaviour of a storage box, i.e. it is equivalent to not adding the attribute.

Adding an attribute with key “type” and value “receiving” means that the storage box will be treated as a staging area which receives files intended to be transferred to a permanent storage box. If a storage box has the “type: receiving” attribute, it must link to a permanent storage box (via its master_box foreign key).

Adding an attribute with key “type” and value “cache” means that the storage box will be used to copy data from slow-access storage to fast-access storage. If a storage box has the “type: cache” attribute, it must link to a permanent storage box (via its master_box foreign key).

exception DoesNotExist

Bases: `django.core.exceptions.ObjectDoesNotExist`

exception MultipleObjectsReturned

Bases: `django.core.exceptions.MultipleObjectsReturned`

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

key

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
objects = <django.db.models.manager.Manager object>
```

storage_box

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

`child.parent` is a `ForwardManyToOneDescriptor` instance.

storage_box_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

value

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
class tardis.tardis_portal.models.storage.StorageBoxOption (*args, **kwargs)
Bases: django.db.models.base.Model

holds the options passed to the storage class defined in StorageBox. key->value store with support for typed values through pickling when value_type is set to 'pickle'

exception DoesNotExist
    Bases: django.core.exceptions.ObjectDoesNotExist

exception MultipleObjectsReturned
    Bases: django.core.exceptions.MultipleObjectsReturned

PICKLE = 'pickle'

STRING = 'string'

TYPE_CHOICES = (('string', 'String value'), ('pickle', 'Pickled value'))
get_value_type_display (**morekwargs)

id
A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

key
A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

objects = <django.db.models.manager.Manager object>
storage_box
    Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

    In the example:

class Child(Model):
    parent = ForeignKey(Parent, related_name='children')

    child.parent is a ForwardManyToOneDescriptor instance.

storage_box_id
A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

unpickled_value

value
A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

value_type
A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.
```

tardis.tardis_portal.models.token module

```
class tardis.tardis_portal.models.token.Token(id, token, experiment, expiry_date, user)
    Bases: django.db.models.base.Model

exception DoesNotExist
    Bases: django.core.exceptions.ObjectDoesNotExist

exception MultipleObjectsReturned
    Bases: django.core.exceptions.MultipleObjectsReturned

experiment
    Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.
```

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

experiment_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

expiry_date

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
get_next_by_expiry_date(**morekwargs)
```

```
get_previous_by_expiry_date(**morekwargs)
```

```
get_session_expiry()
```

A token login should expire at the earlier of a) tomorrow at 4am b) the (end of) the token's expiry date

It is the responsibility of token_auth to set the session expiry

id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

```
is_expired()
```

```
objects = <tardis.tardis_portal.managers.OracleSafeManager object>
```

```
save_with_random_token()
```

token

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

user

Accessor to the related object on the forward side of a many-to-one or one-to-one (via ForwardOneToOneDescriptor subclass) relation.

In the example:

```
class Child(Model):
    parent = ForeignKey(Parent, related_name='children')
```

child.parent is a ForwardManyToOneDescriptor instance.

user_id

A wrapper for a deferred-loading field. When the value is read from this object the first time, the query is executed.

Module contents

models/__init__.py

tardis.tardis_portal.publish package**Subpackages****tardis.tardis_portal.publish.provider package****Submodules****tardis.tardis_portal.publish.provider.rifcsprovider module**

```
class tardis.tardis_portal.publish.provider.rifcsprovider.RifCsProvider
Bases: object

can_publish(experiment)
get_rifcs_context(experiment)
get_template(experiment)
is_schema_valid(experiment)
```

Module contents**Submodules****tardis.tardis_portal.publish.publishservice module**

```
class tardis.tardis_portal.publish.publishservice.PublishService(providers, experiment)

get_context()
get_template()
manage_rifcs(oaipath)
```

Module contents**tardis.tardis_portal.storage package****Submodules**

tardis.tardis_portal.storage.file_system module

```
class tardis.tardis_portal.storage.file_system.MyTardisLocalFileSystemStorage(location=None,  
                                base_url=None)  
Bases: django.core.files.storage.FileSystemStorage
```

Simply changes the FileSystemStorage default store location to the MyTardis file store location. Makes it easier to migrate 2.5 installations.

Module contents

```
class tardis.tardis_portal.storage.DummyStorage  
Bases: django.core.files.storage.Storage
```

Does nothing except serve as a place holder for Storage classes not implemented yet

tardis.tardis_portal.templatetags package

Submodules

tardis.tardis_portal.templatetags.approved_user_tags module

```
tardis.tardis_portal.templatetags.approved_user_tags.check_if_user_not_approved(request)  
Custom template filter to identify whether a user account is approved.
```

```
tardis.tardis_portal.templatetags.approved_user_tags.get_matching_authmethod(backend)
```

tardis.tardis_portal.templatetags.basiccomparisonfilters module

```
tardis.tardis_portal.templatetags.basiccomparisonfilters.gt(value, arg)  
Returns a boolean of whether the value is greater than the argument.
```

```
tardis.tardis_portal.templatetags.basiccomparisonfilters.gte(value, arg)  
Returns a boolean of whether the value is greater than or equal to the argument.
```

```
tardis.tardis_portal.templatetags.basiccomparisonfilters.length_gt(value,  
                     arg)  
Returns a boolean of whether the value's length is greater than the argument.
```

```
tardis.tardis_portal.templatetags.basiccomparisonfilters.length_gte(value,  
                     arg)  
Returns a boolean of whether the value's length is greater than or equal to the argument.
```

```
tardis.tardis_portal.templatetags.basiccomparisonfilters.length_lt(value,  
                     arg)  
Returns a boolean of whether the value's length is less than the argument.
```

```
tardis.tardis_portal.templatetags.basiccomparisonfilters.length_lte(value,  
                     arg)  
Returns a boolean of whether the value's length is less than or equal to the argument.
```

```
tardis.tardis_portal.templatetags.basiccomparisonfilters.lt(value, arg)  
Returns a boolean of whether the value is less than the argument.
```

```
tardis.tardis_portal.templatetags.basiccomparisonfilters.lte(value, arg)  
Returns a boolean of whether the value is less than or equal to the argument.
```

tardis.tardis_portal.templatetags.bleach_tag module

```
tardis.tardis_portal.templatetags.bleach_tag.bleach_value(value)
```

tardis.tardis_portal.templatetags.capture module

```
class tardis.tardis_portal.templatetags.capture.CaptureNode(nodelist, varname)
```

Bases: django.template.base.Node

```
    render(context)
```

```
tardis.tardis_portal.templatetags.capture.capture(parser, token)
```

```
    {% capture as [foo] %}
```

tardis.tardis_portal.templatetags.dataset_tags module

```
tardis.tardis_portal.templatetags.dataset_tags.dataset_datafiles_badge(dataset=None,  
count=None)
```

Displays an badge with the number of datafiles for this experiment

```
tardis.tardis_portal.templatetags.dataset_tags.dataset_experiments_badge(dataset)
```

Displays an badge with the number of datasets for this experiment

```
tardis.tardis_portal.templatetags.dataset_tags.dataset_size_badge(dataset=None,  
size=None)
```

Displays an badge with the total size of the files in this experiment

```
tardis.tardis_portal.templatetags.dataset_tags.dataset_tiles(experiment, in-  
clude_thumbnails)
```

tardis.tardis_portal.templatetags.dynurl module

```
class tardis.tardis_portal.templatetags.dynurl.DynUrlNode(*args)
```

Bases: django.template.base.Node

```
    render(context)
```

```
tardis.tardis_portal.templatetags.dynurl.dynurl(parser, token)
```

tardis.tardis_portal.templatetags.experiment_tags module

```
tardis.tardis_portal.templatetags.experiment_tags.experiment_browse_item(experiment,  
**kwargs)
```

Displays an experiment for a browsing view.

```
tardis.tardis_portal.templatetags.experiment_tags.experiment_datafiles_badge(experiment)
```

Displays an badge with the number of datafiles for this experiment

```
tardis.tardis_portal.templatetags.experiment_tags.experiment_datasets_badge(experiment)
```

Displays an badge with the number of datasets for this experiment

```
tardis.tardis_portal.templatetags.experiment_tags.experiment_last_updated_badge(experiment)
```

```
tardis.tardis_portal.templatetags.experiment_tags.experiment_public_access_badge(experiment)
```

Displays an badge the level of public access for this experiment

`tardis.tardis_portal.templatetags.experiment_tags.experiment_size_badge(experiment)`
Displays an badge with the total size of the files in this experiment

tardis.tardis_portal.templatetags.experimentstats module

`tardis.tardis_portal.templatetags.experimentstats.experiment_file_count(value)`

tardis.tardis_portal.templatetags.facility_tags module

`tardis.tardis_portal.templatetags.facility_tags.check_if_facility_manager(request)`
Custom template filter to identify whether a user is a facility manager.

tardis.tardis_portal.templatetags.feed module

`tardis.tardis_portal.templatetags.feed.todatetime(value)`

tardis.tardis_portal.templatetags.formfieldfilters module

This module holds filters that can be used in postprocessing a form field.

@author: Gerson Galang

`tardis.tardis_portal.templatetags.formfieldfilters.parametername_form(value)`
Removes all values of arg from the given string

`tardis.tardis_portal.templatetags.formfieldfilters.sanitize_html(html,`
`bad_tags=['body'])`
Removes identified malicious HTML content from the given string.

`tardis.tardis_portal.templatetags.formfieldfilters.size(value, actualSize)`
Add the size attribute to the text field.

tardis.tardis_portal.templatetags.lookupfilters module

`tardis.tardis_portal.templatetags.lookupfilters.get_item(dictionary, key)`
Returns a value from a dictionary.

tardis.tardis_portal.templatetags.pagination module

`tardis.tardis_portal.templatetags.pagination.pagination(data_list, paginator,`
`page_num, query_string)`
Generates the series of links to the pages in a paginated list.

`tardis.tardis_portal.templatetags.pagination.paginator_number(data_list, paginator,`
`page_num,`
`query_string,`
`page_index)`
Generates an individual page index link in a paginated list.

[tardis.tardis_portal.templatetags.xmldate module](#)

```
tardis.tardis_portal.templatetags.xmldate.toxmldatetime(value)
```

Module contents

[tardis.tardis_portal.tests package](#)

Subpackages

[tardis.tardis_portal.tests.api package](#)

Submodules

[tardis.tardis_portal.tests.api.test_auth module](#)

Testing authentication and authorization in the Tastypie-based MyTardis REST API

```
class tardis.tardis_portal.tests.api.test_auth.ACLAuthorizationTest(methodName='runTest')  
    Bases: django.test.testcases.TestCase  
  
class tardis.tardis_portal.tests.api.test_auth.MyTardisAuthenticationTest(methodName='runTest')  
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase  
        test_apikey_authentication()  
        test_bad_credentials()
```

[tardis.tardis_portal.tests.api.test_datafile_metadata_resources module](#)

Testing the DatafileParameter and DatafileParameterSet resources in MyTardis's Tastypie-based REST API

```
class tardis.tardis_portal.tests.api.test_datafile_metadata_resources.DatafileParameterReso  
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase  
  
class tardis.tardis_portal.tests.api.test_datafile_metadata_resources.DatafileParameterSet  
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase
```

[tardis.tardis_portal.tests.api.test_datafile_resource module](#)

Testing the DataFile resource in MyTardis's Tastypie-based REST API

```
class tardis.tardis_portal.tests.api.test_datafile_resource.DataFileResourceTest(methodName='runTest')  
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase  
        setUp()  
            Hook method for setting up the test fixture before exercising it.  
  
        test_create_df_for_staging()  
  
        test_download_file()  
            Doesn't actually check the content downloaded yet Just checks if the download API endpoint responds  
            with 200
```

```
test_post_single_file()
test_shared_fs_many_files()
    tests sending many files with known permanent location (useful for Australian Synchrotron ingestions)
test_shared_fs_single_file()
```

tardis.tardis_portal.tests.api.test_dataset_metadata_resources module

Testing the DatasetParameter and DatasetParameterSet resources in MyTardis's Tastypie-based REST API

```
class tardis.tardis_portal.tests.api.test_dataset_metadata_resources.DatasetParameterResource
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase

class tardis.tardis_portal.tests.api.test_dataset_metadata_resources.DatasetParameterSetResource
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase

setUp()
    Hook method for setting up the test fixture before exercising it.

tearDown()
    Hook method for deconstructing the test fixture after testing it.

test_create_dataset_pset()
    Test creating a dataset parameter set

test_create_dataset_pset_no_auth()
    Test attempting to create a dataset parameter set without access

test_post_dataset_with_params()
    Test creating a dataset with metadata
```

tardis.tardis_portal.tests.api.test_dataset_resource module

Testing the Dataset resource in MyTardis's Tastypie-based REST API

```
class tardis.tardis_portal.tests.api.test_dataset_resource.DatasetResourceTest(methodName='run')
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase

setUp()
    Hook method for setting up the test fixture before exercising it.

test_get_dataset_files()
test_get_dataset_filter_instrument()
test_get_dataset_no_instrument()
test_get_dataset_with_instrument()
test_post_dataset()
```

tardis.tardis_portal.tests.api.test_experiment_metadata_resources module

Testing the ExperimentParameter and ExperimentParameterSet resources in MyTardis's Tastypie-based REST API

```
class tardis.tardis_portal.tests.api.test_experiment_metadata_resources.ExperimentParameterResource
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase
```

```
class tardis.tardis_portal.tests.api.test_experiment_metadata_resources.ExperimentParameterTest
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase
```

tardis.tardis_portal.tests.api.test_experiment_resource module

Testing the Experiment resource in MyTardis's Tastypie-based REST API

```
class tardis.tardis_portal.tests.api.test_experiment_resource.ExperimentResourceTest (methodName='runTest')
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase

    setUp ()
        Hook method for setting up the test fixture before exercising it.

    test_get_experiment ()
    test_post_experiment ()
```

tardis.tardis_portal.tests.api.test_facility_resource module

Testing the Facility resource in MyTardis's Tastypie-based REST API

```
class tardis.tardis_portal.tests.api.test_facility_resource.FacilityResourceTest (methodName='runTest')
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase

    test_get_facility_by_id ()
    test_get_facility_by_manager_group_id ()
        This type of query can be used to iterate through a user's groups, and use each group's id to determine which facilities a user manages, i.e. a way to obtain the functionality implemented by facilities_managed_by() via the API
    test_get_facility_by_name ()
```

tardis.tardis_portal.tests.api.test_group_resource module

Testing the Group resource in MyTardis's Tastypie-based REST API

```
class tardis.tardis_portal.tests.api.test_group_resource.GroupResourceTest (methodName='runTest')
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase

    test_get_group_by_id ()
    test_get_group_by_name ()
```

tardis.tardis_portal.tests.api.test_instrument_resource module

Testing the Instrument resource in MyTardis's Tastypie-based REST API

```
class tardis.tardis_portal.tests.api.test_instrument_resource.InstrumentResourceTest (methodName='runTest')
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase

    test_get_instrument_by_id ()
    test_get_instrument_by_name ()
    test_post_instrument ()
    test_rename_instrument ()
```

```
test_unauthorized_instrument_access_attempt()
```

tardis.tardis_portal.tests.api.test_replica_resource module

Testing the Replica resource in MyTardis's Tastypie-based REST API

"Replica" was the old name for what is now known as a DataFileObject in MyTardis. The API v1 endpoint is still /api/v1/replica/

```
class tardis.tardis_portal.tests.api.test_replica_resource.ReplicaResourceTest (methodName='runTest')
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase
```

tardis.tardis_portal.tests.api.test_schema_resource module

Testing the Schema resource in MyTardis's Tastypie-based REST API

```
class tardis.tardis_portal.tests.api.test_schema_resource.SchemaResourceTest (methodName='runTest')
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase

    setUp()
        Hook method for setting up the test fixture before exercising it.

    tearDown()
        Hook method for deconstructing the test fixture after testing it.

    test_get_schema_by_id()
    test_get_schema_by_namespace()
```

tardis.tardis_portal.tests.api.test_serializer module

Testing the serializer in the Tastypie-based MyTardis REST API

```
class tardis.tardis_portal.tests.api.test_serializer.SerializerTest (methodName='runTest')
    Bases: django.test.testcases.TestCase

    test_debug_serializer()
    test_pretty_serializer()
```

tardis.tardis_portal.tests.api.test_storagebox_resources module

Testing the StorageBox resources in MyTardis's Tastypie-based REST API

```
class tardis.tardis_portal.tests.api.test_storagebox_resources.StorageBoxAttributeResourceTest (methodName='runTest')
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase

    test_get_storage_box_attr_list_from_box_id()

class tardis.tardis_portal.tests.api.test_storagebox_resources.StorageBoxOptionResourceTest (methodName='runTest')
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase

    test_get_storage_box_option_by_id()
    test_get_storage_box_option_list_from_box_id()

class tardis.tardis_portal.tests.api.test_storagebox_resources.StorageBoxResourceTest (methodName='runTest')
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase
```

```
test_get_storage_box_by_id()
```

tardis.tardis_portal.tests.api.test_user_resource module

Testing the User resource in MyTardis's Tastypie-based REST API

```
class tardis.tardis_portal.tests.api.test_user_resource.UserResourceTest (methodName='runTest')
    Bases: tardis.tardis_portal.tests.api.MyTardisResourceTestCase

    test_get_user_by_id()
    test_get_user_by_username()
```

Module contents

Testing the tastypie-based mytardis api

```
class tardis.tardis_portal.tests.api.MyTardisResourceTestCase (methodName='runTest')
    Bases: tastypie.test.ResourceTestCaseMixin, django.test.testcases.TestCase

    abstract class without tests to combine common settings in one place

    get_admin_credentials()
    get_apikey_credentials()
    get_credentials()

    setUp()
        Hook method for setting up the test fixture before exercising it.
```

tardis.tardis_portal.tests.auth package

Module contents

tardis.tardis_portal.tests.filters package

Submodules

tardis.tardis_portal.tests.filters.test_jeolsem module

```
class tardis.tardis_portal.tests.filters.test_jeolsem.JEOLSEMFilterTestCase (methodName='runTest')
    Bases: django.test.testcases.TransactionTestCase

    setUp()
        Hook method for setting up the test fixture before exercising it.

    testJEOLComplex()
    testJEOLSimpler()
```

tardis.tardis_portal.tests.filters.test_middleware module

```
class tardis.tardis_portal.tests.filters.test_middleware.Filter1

    @classmethod def getTuples():
        tuples = []

class tardis.tardis_portal.tests.filters.test_middleware.Filter2

    @classmethod def getTuples():
        tuples = []

class tardis.tardis_portal.tests.filters.test_middleware.FilterInitTestCase(methodName='runTests'):
    Bases: django.test.testcases.TestCase

    setUp():
        Hook method for setting up the test fixture before exercising it.

    testFiltering():

class tardis.tardis_portal.tests.filters.test_middleware.RunFiltersTestCase(methodName='runTests'):
    Bases: django.test.testcases.TestCase

    setUp():
        Hook method for setting up the test fixture before exercising it.

    tearDown():
        Hook method for deconstructing the test fixture after testing it.

    testAll():
        Just test that we can run ./manage.py runfilters --all without any runtime exceptions

    testDryRun():
        Just test that we can run ./manage.py runfilters --dryRun without any runtime exceptions

    testList():
        Just test that we can run ./manage.py runfilters --list without any runtime exceptions
```

Module contents

tardis.tardis_portal.tests.management package

Submodules

tardis.tardis_portal.tests.management.test_collectstatic module

```
class tardis.tardis_portal.tests.management.test_collectstatic.CollectstaticTest(methodName='runTests'):
    Bases: django.test.testcases.TestCase

    setUp():
        Hook method for setting up the test fixture before exercising it.

    tearDown():
        Hook method for deconstructing the test fixture after testing it.

    test_collectstatic()
```

tardis.tardis_portal.tests.management.test_createuser module

```
class tardis.tardis_portal.tests.management.test_createuser.CreateUserTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase

    testInteractive()
        Just test that we can run ./manage.py createuser without any runtime exceptions by mocking the raw_input
        username and email entry

    testNoInput()
        Just test that we can run ./manage.py createuser --username testuser1 --email testuser1@example.com
        --noinput without any runtime exceptions
```

tardis.tardis_portal.tests.management.test_dumpschemas module

```
class tardis.tardis_portal.tests.management.test_dumpschemas.DumpSchemasTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase

    setUp()
        Hook method for setting up the test fixture before exercising it.

    tearDown()
        Hook method for deconstructing the test fixture after testing it.

    testDumpSchemas()
        Just test that we can run ./manage.py dumpschemas without any runtime exceptions
```

tardis.tardis_portal.tests.management.test_loadschemas module

```
class tardis.tardis_portal.tests.management.test_loadschemas.LoadSchemasTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase

    testLoadSchemas()
        Test that we can run ./manage.py loadschemas tardis/tardis_portal/fixtures/jeol_metadata_schema.json
```

tardis.tardis_portal.tests.management.test_rmexperiment module

```
class tardis.tardis_portal.tests.management.test_rmexperiment.RmExperimentTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase

    testList()
    testRemove()
```

Module contents

This package contains tests relating to management commands, i.e. command-line tools invoked with manage.py

tardis.tardis_portal.tests.views package

Submodules

tardis.tardis_portal.tests.views.test_auth_views module

test_auth_views.py

Tests for view methods relating to users, groups, access controls and authorization

```
class tardis.tardis_portal.tests.views.test_auth_views.ManageAccountTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase

    test_manage_account()

class tardis.tardis_portal.tests.views.test_auth_views.RightsTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase

    test_rights_require_valid_owner()

class tardis.tardis_portal.tests.views.test_auth_views.UserGroupListsTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase

    setUp()
        Hook method for setting up the test fixture before exercising it.

    tearDown()
        Hook method for deconstructing the test fixture after testing it.

    test_get_group_list()

    test_get_user_list()

class tardis.tardis_portal.tests.views.test_auth_views.UserListTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase

    User lists are used for autocompleting the user-to-share-with field when granting access to an experiment

    setUp()
        Hook method for setting up the test fixture before exercising it.

    tearDown()
        Hook method for deconstructing the test fixture after testing it.

    test_get_user_list()
```

tardis.tardis_portal.tests.views.test_contextual_views module

test_contextual_views.py

Tests for view methods supplying context data to templates

```
class tardis.tardis_portal.tests.views.test_contextual_views.ContextualViewTest (methodName='runTest')
    Bases: django.test.testcases.TestCase

    setUp()
        setting up essential objects, copied from tests above

    tearDown()
        Hook method for deconstructing the test fixture after testing it.

    test_details_display()
        test display of view for an existing schema and no display for an undefined one.
```

tardis.tardis_portal.tests.views.test_experiment_views module

test_experiment_views.py

Tests for view methods relating to experiments

```
class tardis.tardis_portal.tests.views.test_experiment_views.ExperimentTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase

    setUp()
        Hook method for setting up the test fixture before exercising it.

    test_create_and_edit()
    test_dataset_json()
```

tardis.tardis_portal.tests.views.test_template_contexts module

test_template_contexts.py

Tests for view methods supplying context data to templates

```
class tardis.tardis_portal.tests.views.test_template_contexts.ExperimentListsTest (methodName='runTest')
    Bases: django.test.testcases.TestCase

    setUp()
        setting up essential objects, copied from tests above

    tearDown()
        Hook method for deconstructing the test fixture after testing it.

    test_mydata_view()
        Test My Data view

    test_shared_view()
        Test Shared view

class tardis.tardis_portal.tests.views.test_template_contexts.ViewTemplateContextsTest (methodName='runTest')
    Bases: django.test.testcases.TestCase

    setUp()
        setting up essential objects, copied from tests above

    tearDown()
        Hook method for deconstructing the test fixture after testing it.

    test_dataset_view()
        test some context parameters for a dataset view

    test_experiment_view()
        test some template context parameters for an experiment view
```

tardis.tardis_portal.tests.views.test_upload_views module

test_upload_views.py

Tests for view methods relating to uploads

```
class tardis.tardis_portal.tests.views.test_upload_views.UploadTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase
```

```
setUp()
    Hook method for setting up the test fixture before exercising it.

tearDown()
    Hook method for deconstructing the test fixture after testing it.

test_file_upload()
test_upload_complete()
```

Module contents

Tests for view methods in tardis/tardis_portal/views/

Submodules

[tardis.tardis_portal.tests.ldap_ldif module](#)

[tardis.tardis_portal.tests.slapd module](#)

Utilities for starting up a test slapd server and talking to it with ldapsearch/ldapadd.

```
class tardis.tardis_portal.tests.slapd.Slapd
    Controller class for a slapd instance, OpenLDAP's server.
```

This class creates a temporary data store for slapd, runs it on a private port, and initialises it with a top-level dc and the root user.

When a reference to an instance of this class is lost, the slapd server is shut down.

```
PATH_LDAPADD = None
PATH_LDAPSEARCH = None
PATH_SCHEMA_DIR = '/home/docs/checkouts/readthedocs.org/user_builds/mytardis/checkouts'
PATH_SLAPD = None
PATH_SLAPTEST = None
PATH_TMPDIR = '/tmp/tmpEptJ6p'
TEST_UTILS_DIR = '/home/docs/checkouts/readthedocs.org/user_builds/mytardis/checkouts/'

@classmethod def check_paths():
    Checks that the configured executable paths look valid. If they don't, then logs warning messages (not errors).

def configure(cfg):
    Appends slapd.conf configuration lines to cfg. Also re-initializes any backing storage. Feel free to subclass and override this method.

get_address()
get_dn_suffix()
get_root_dn()
get_root_password()
get_tmpdir()
```

```

get_url()
ldapadd (ldif, extra_args=[])
    Runs ldapadd on this slapd instance, passing it the ldif content

ldapsearch (base=None, filter='objectClass=*'', attrs=[], scope='sub', extra_args=[])
restart()
    Restarts the slapd server; ERASING previous content. Starts the server even if it isn't already running.

set_debug()
set_dn_suffix (dn)
set_port (port)
set_root_cn (cn)
set_root_password (pw)
set_slapd_debug_level (level)
set_tmpdir (path)
start()
    Starts the slapd server process running, and waits for it to come up.

started()
    This method is called when the LDAP server has started up and is empty. By default, this method adds the two initial objects, the domain object and the root user object.

stop()
    Stops the slapd server, and waits for it to terminate

wait()
    Waits for the slapd process to terminate by itself.

tardis.tardis_portal.tests.slapd.delete_directory_content (path)
tardis.tardis_portal.tests.slapd.find_available_tcp_port (host='127.0.0.1')
tardis.tardis_portal.tests.slapd.mkdirs (path)
    Creates the directory path unless it already exists

tardis.tardis_portal.tests.slapd.quote (s)
    Quotes the " and characters in a string and surrounds with “...”

tardis.tardis_portal.tests.slapd.which (executable)

```

tardis.tardis_portal.tests.test_authentication module

Created on 19/01/2011

```

class tardis.tardis_portal.tests.test_authentication.AuthenticationTestCase (methodName='runTe
    Bases: django.test.testcases.TestCase

setUp()
    Hook method for setting up the test fixture before exercising it.

```

tardis.tardis_portal.tests.test_authservice module

```
class tardis.tardis_portal.tests.test_authservice.AuthServiceTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase

    setUp()
        Hook method for setting up the test fixture before exercising it.

    tearDown()
        Hook method for deconstructing the test fixture after testing it.

    testAuthenticate()
    testGetGroupsForEntity()
    testGroupProvider()
    testGroupSearch()
    testInitialisation()

class tardis.tardis_portal.tests.test_authservice.MockAuthProvider

    authenticate(request)

class tardis.tardis_portal.tests.test_authservice.MockGroupProvider
    Bases: tardis.tardis_portal.auth.interfaces.GroupProvider

    getGroupById(id)
    getGroups(user)
    getGroupsForEntity(id)
    searchGroups(**filter)

class tardis.tardis_portal.tests.test_authservice.MockRequest
    Bases: django.http.request.HttpRequest

    setPost(field, value)
```

```
class tardis.tardis_portal.tests.test_authservice.MockSettings
Bases: object
```

tardis.tardis_portal.tests.test_copy_move module

test_copy_move.py

Test copying and moving a file to another storage box

```
class tardis.tardis_portal.tests.test_copy_move.CopyMoveTestCase (methodName='runTest')
Bases: django.test.testcases.TestCase
```

Test copying and moving files between storage boxes

setUp()

Hook method for setting up the test fixture before exercising it.

tearDown()

Hook method for deconstructing the test fixture after testing it.

test_cache()

Test caching a file from a slow-access storage box

test_copy()

Test copying a file to another storage box

test_move()

Test moving a file to another storage box

tardis.tardis_portal.tests.test_download module

```
class tardis.tardis_portal.tests.test_download.DownloadTestCase (methodName='runTest')
Bases: django.test.testcases.TestCase
```

setUp()

Hook method for setting up the test fixture before exercising it.

tearDown()

Hook method for deconstructing the test fixture after testing it.

testDatasetFile()

testDownload()

testView()

tardis.tardis_portal.tests.test_download.get_size_and_sha512sum(testfile)

tardis.tardis_portal.tests.test_download_apikey module

```
class tardis.tardis_portal.tests.test_download_apikey.ApiKeyDownloadTestCase (methodName='runTest')
Bases: tastypie.test.ResourceTestCaseMixin, django.test.testcases.TestCase
```

setUp()

Hook method for setting up the test fixture before exercising it.

tearDown()

Hook method for deconstructing the test fixture after testing it.

```
test_downloadapikey()
```

tardis.tardis_portal.tests.test_facility_overview module

Tests relating to facility overview

```
class tardis.tardis_portal.tests.test_facility_overview.FacilityOverviewTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase

    setUp()
        Hook method for setting up the test fixture before exercising it.

    test_facility_overview_datafile_list()
    test_facility_overview_experiments()
        Despite the name of the test_facility_overview_experiments method, it actually returns a JSON list of datasets (not experiments)
```

tardis.tardis_portal.tests.test_forms module

test_models.py <http://docs.djangoproject.com/en/dev/topics/testing/>

```
class tardis.tardis_portal.tests.test_forms.RightsFormTestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase

    setUp()
        Hook method for setting up the test fixture before exercising it.

    test_ensures_suitable_license()
    test_needs_confirmation()
```

tardis.tardis_portal.tests.test_iif module

class tardis.tardis_portal.tests.test_iif.ExtraTestCases (methodName='runTest')
    Bases: django.test.testcases.TestCase
```

As per: <http://library.stanford.edu/iiif/image-api/compliance.html>

```
setUp()
    Hook method for setting up the test fixture before exercising it.

testImageCacheControl()
testImageHasEtags()
testInfoHasEtags()
```

```
class tardis.tardis_portal.tests.test_iif.Level0TestCase (methodName='runTest')
    Bases: django.test.testcases.TestCase
```

As per: <http://library.stanford.edu/iiif/image-api/compliance.html>

```
setUp()
    Hook method for setting up the test fixture before exercising it.

testCanGetInfoAsJSON()
testCanGetInfoAsXML()
```

```
testCanGetOriginalImage()

class tardis.tardis_portal.tests.test_iiif.Level1TestCase (methodName='runTest')
Bases: django.test.testcases.TestCase

As per: http://library.stanford.edu/iiif/image-api/compliance.html

setUp()
    Hook method for setting up the test fixture before exercising it.

testCanGetJpegFormat()
testHandleRegions()
testHandleRotation()
testHandleSizing()

class tardis.tardis_portal.tests.test_iiif.Level2TestCase (methodName='runTest')
Bases: django.test.testcases.TestCase

As per: http://library.stanford.edu/iiif/image-api/compliance.html

setUp()
    Hook method for setting up the test fixture before exercising it.

testCanGetRequiredFormats()
testHandleSizing()
```

tardis.tardis_portal.tests.test_ldap module

```
class tardis.tardis_portal.tests.test_ldap.LDAPErrorTest (methodName='runTest')
Bases: django.test.testcases.TestCase

test_search()

class tardis.tardis_portal.tests.test_ldap.LDAPTest (methodName='runTest')
Bases: django.test.testcases.TestCase

setUp()
    Hook method for setting up the test fixture before exercising it.

tearDown()
    Hook method for deconstructing the test fixture after testing it.

test_authenticate()
test_getgroupbyid()
test_getgroups()
test_getgroupsforentity()
test_getuserbyid()
test_search()
test_searchgroups()
```

tardis.tardis_portal.tests.test_models module

test_models.py <http://docs.djangoproject.com/en/dev/topics/testing/>

```
class tardis.tardis_portal.tests.test_models.ModelTestCase (methodName='runTest')
Bases: django.test.testcases.TestCase

setUp()
    Hook method for setting up the test fixture before exercising it.

test_authors()
test_create_user_automatically_generate_api_key()
test_datafile()
test_dataset()
test_deleting_dfo_without_uri()
test_experiment()
test_instrument()
test_parameter()
```

tardis.tardis_portal.tests.test_parameters module

test_parameters.py

```
class tardis.tardis_portal.tests.test_parameters.ParametersTestCase (methodName='runTest')
Bases: django.test.testcases.TestCase

Tests for the different parameter types, defined in the tardis.tardis_portal.models.parameters.ParameterName
class:

NUMERIC, STRING, URL, LINK, FILENAME, DATETIME, LONGSTRING and JSON

setUp()
    Hook method for setting up the test fixture before exercising it.

tearDown()
    Hook method for deconstructing the test fixture after testing it.

test_experiment_parameter_get()
    Test the Parameter class's get() method which should return an appropriate string representation of the
    parameter which depends on the parameter's data type:
    NUMERIC, STRING, URL, LINK, FILENAME, DATETIME, LONGSTRING or JSON

test_image_filename_parameters()
    When a FILENAME parameter refers to a thumbnail image file, MyTardis can generate a HTML for
    displaying that image.

    This method tests the generation of the image HTML

test_link_urls()
    Test URLs generated for parameters which link to MyTardis model records

test_permissions_checks()
    Test permissions checks, used by tardis.tardis_portal.auth.authorisation
```

tardis.tardis_portal.tests.test_parametersets module

```
test_parametersets.py http://docs.djangoproject.com/en/dev/topics/testing/
class tardis.tardis_portal.tests.test_parametersets.EditParameterSetTestCase (methodName='runTest')
Bases: django.test.testcases.TestCase

setUp()
    Hook method for setting up the test fixture before exercising it.

tearDown()
    Hook method for deconstructing the test fixture after testing it.

test_add_datafile_params()
test_add_dataset_params()
test_add_experiment_params()
test_edit_datafile_params()
test_edit_dataset_params()
test_edit_experiment_params()

class tardis.tardis_portal.tests.test_parametersets.ParameterSetManagerTestCase (methodName='runTest')
Bases: django.test.testcases.TestCase

setUp()
    Hook method for setting up the test fixture before exercising it.

tearDown()
    Hook method for deconstructing the test fixture after testing it.

test_existing_parameterset()
test_link_parameter_type()
    Test that Parameter.link_gfk (GenericForeignKey) is correctly assigned after using Parameter.set_value(some_url) for a LINK Parameter.

test_link_parameter_type_extra()
test_new_parameterset()
test_parameterset_as_string()
test_tz_aware_date_handling()
    Ensure that dates are handling in a timezone-aware way.

test_tz_naive_date_handling()
    Ensure that dates are handling in a timezone-aware way.

test_unresolvable_link_parameter()
    Test that LINK Parameters that can't be resolved to a model (including non-URL values) still work.
```

tardis.tardis_portal.tests.test_publishservice module

```
class tardis.tardis_portal.tests.test_publishservice.MockRifCsProvider
Bases: tardis.tardis_portal.publish.provider.rifcsprovider.RifCsProvider

get_beamline(experiment)
get_license_uri(experiment)
```

```
get_rifcs_context (experiment)
get_template (experiment)
is_schema_valid (experiment)

class tardis.tardis_portal.tests.test_publishservice.PublishServiceTestCase (methodName='runTest')
Bases: django.test.testcases.TestCase

setUp ()
    Hook method for setting up the test fixture before exercising it.

Module contents

tardis.tardis_portal.views package

Submodules

tardis.tardis_portal.views.ajax_actions module

views that perform some action and don't return anything very useful

tardis.tardis_portal.views.ajax_json module

views that return JSON data

```
tardis.tardis_portal.views.ajax_json.retrieve_licenses(request)
```

tardis.tardis_portal.views.ajax_pages module

views that return HTML that is injected into pages

```
tardis.tardis_portal.views.ajax_pages.experiment_public_access_badge(request,
    experiment_id)
```

```
tardis.tardis_portal.views.ajax_pages.retrieve_owned_exps_list(request, *args,
    **kwargs)
```

```
tardis.tardis_portal.views.ajax_pages.retrieve_shared_exps_list(request, *args,
    **kwargs)
```

tardis.tardis_portal.views.authentication module

views that have to do with authentication

```
tardis.tardis_portal.views.authentication.create_user(request, *args, **kwargs)
tardis.tardis_portal.views.authentication.login(request, *args, **kwargs)
    handler for login page
tardis.tardis_portal.views.authentication.logout(request)
tardis.tardis_portal.views.authentication.manage_auth_methods(request,      *args,
                                                               **kwargs)
    Manage the user's authentication methods using AJAX.
tardis.tardis_portal.views.authentication.manage_user_account(request,      *args,
                                                               **kwargs)
tardis.tardis_portal.views.authentication.rcauth(*args, **kwargs)
```

tardis.tardis_portal.views.authorisation module

views that have to do with authorisations

```
tardis.tardis_portal.views.authorisation.create_group(*args, **kwargs)
tardis.tardis_portal.views.authorisation.manage_groups(request, *args, **kwargs)
tardis.tardis_portal.views.authorisation.retrieve_access_list_group_READONLY(request,
                                                                           *args,
                                                                           **kwargs)
tardis.tardis_portal.views.authorisation.retrieve_access_list_user_READONLY(request,
                                                                           *args,
                                                                           **kwargs)
tardis.tardis_portal.views.authorisation.retrieve_group_list(request,      *args,

                                                                           **kwargs)
tardis.tardis_portal.views.authorisation.retrieve_user_list(request,      *args,
                                                               **kwargs)
tardis.tardis_portal.views.authorisation.share(request, experiment_id)
    Choose access rights and licence.
tardis.tardis_portal.views.authorisation.token_delete(request, *args, **kwargs)
```

tardis.tardis_portal.views.facilities module

views relevant for facilities and the facility view

```
tardis.tardis_portal.views.facilities.dataset_aggregate_info(dataset)
```

```
tardis.tardis_portal.views.facilities.datetime_to_us(dt)
```

The datetime objects are kept as None if they aren't set, otherwise they're converted to milliseconds so AngularJS can format them nicely.

```
tardis.tardis_portal.views.facilities.facility_overview_data_count(request,  
*args,  
**kwargs)
```

returns the total number of datasets for pagination in json format

```
tardis.tardis_portal.views.facilities.facility_overview_datafile_list(dataset)
```

```
tardis.tardis_portal.views.facilities.facility_overview_dataset_detail(request,  
*args,  
**kwargs)
```

```
tardis.tardis_portal.views.facilities.facility_overview_experiments(request,  
*args,  
**kwargs)
```

json facility datasets

```
tardis.tardis_portal.views.facilities.facility_overview_facilities_list(request,  
*args,  
**kwargs)
```

json list of facilities managed by the current user

tardis.tardis_portal.views.images module

views that return images or route to images

```
tardis.tardis_portal.views.images.load_datafile_image(request, parameter_id)
```

```
tardis.tardis_portal.views.images.load_dataset_image(request, parameter_id)
```

```
tardis.tardis_portal.views.images.load_experiment_image(request, parameter_id)
```

```
tardis.tardis_portal.views.images.load_image(request, *args, **kwargs)
```

tardis.tardis_portal.views.machine module

views that return data useful only to other machines (but not JSON)

```
tardis.tardis_portal.views.machine.site_settings(request)
```

tardis.tardis_portal.views.pages module

views that render full pages

```
class tardis.tardis_portal.views.pages.DatasetView(**kwargs)
```

Bases: django.views.generic.base.TemplateView

```
find_custom_view_override(request, dataset)
```

Determines if any custom view overrides have been defined in settings.DATASET_VIEWS and returns the view function if a match to one the schemas for the dataset is found. (DATASET_VIEWS is a list of (schema_namespace, view_function) tuples).

Parameters

- **request** –

- **dataset** –

Returns

Return type

get (*request*, **args*, ***kwargs*)

View an existing dataset.

This default view can be overridden by defining a dictionary DATASET_VIEWS in settings.

Parameters

- **request** (`django.http.HttpRequest`) – a HTTP request object
- **args** (`list`) –
- **kwargs** (`dict`) –

Returns The Django response object

Return type `django.http.HttpResponse`

get_context_data (*request*, *dataset*, ***kwargs*)

Prepares the values to be passed to the default dataset view, respecting authorization rules. Returns a dict of values (the context).

Parameters

- **request** (`django.http.HttpRequest`) – a HTTP request object
- **dataset** (`tardis.tardis_portal.models.dataset.Dataset`) – the Dataset model instance
- **kwargs** (`dict`) –

Returns A dictionary of values for the view/template.

Return type `dict`

```
template_name = 'tardis_portal/view_dataset.html'

class tardis.tardis_portal.views.pages.ExperimentView(**kwargs)
    Bases: django.views.generic.base.TemplateView

    find_custom_view_override(request, experiment)

    get(request, *args, **kwargs)
        View an existing experiment.
```

This default view can be overridden by defining a dictionary EXPERIMENT_VIEWS in settings.

Parameters

- **request** (`django.http.HttpRequest`) – a HTTP Request instance
- **args** (`list`) –
- **kwargs** (`dict`) – In kwargs: param int experiment_id: the ID of the experiment

Returns an `HttpResponse`

Return type `django.http.HttpResponse`

get_context_data (*request*, *experiment*, ***kwargs*)

Prepares the values to be passed to the default experiment view, respecting authorization rules. Returns a dict of values (the context).

Parameters

- **request** (`django.http.HttpRequest`) – a HTTP request object
- **experiment** (`tardis.tardis_portal.models.experiment.Experiment`) – the experiment model instance
- **kwargs** (`dict`) – kwargs

Returns A dictionary of values for the view/template.

Return type `dict`

```
template_name = 'tardis_portal/view_experiment.html'

class tardis.tardis_portal.views.pages.IndexView(**kwargs)
    Bases: django.views.generic.base.TemplateView

    get(request, *args, **kwargs)
        The index view, intended to render the front page of the MyTardis site listing recent experiments.

        This default view can be overridden by defining a dictionary INDEX_VIEWS in settings which maps SITE_ID's or domain names to an alternative view function (similar to the DATASET_VIEWS or EXPERIMENT_VIEWS overrides).
```

Parameters

- **request** (`django.http.HttpRequest`) – a HTTP request object
- **args** (`list`) –
- **kwargs** (`dict`) –

Returns The Django response object

Return type `django.http.HttpResponse`

```
get_context_data(*args, **kwargs)

template_name = 'tardis_portal/index.html'

tardis.tardis_portal.views.pages.about(request)
tardis.tardis_portal.views.pages.add_dataset(request, *args, **kwargs)
tardis.tardis_portal.views.pages.create_experiment(request, *args, **kwargs)
    Create a new experiment view.
```

Parameters

- **request** (`django.http.HttpRequest`) – a HTTP Request instance
- **template_name** (`string`) – the path of the template to render

Returns an `HttpResponse`

Return type `django.http.HttpResponse`

```
tardis.tardis_portal.views.pages.edit_dataset(request, *args, **kwargs)
tardis.tardis_portal.views.pages.facility_overview(request, *args, **kwargs)
    summary of experiments in a facility

tardis.tardis_portal.views.pages.my_data(request, *args, **kwargs)
    show owned data with credential-based access

tardis.tardis_portal.views.pages.public_data(request)
    list of public experiments
```

`tardis.tardis_portal.views.pages.shared(request, *args, **kwargs)`

show shared data with credential-based access

`tardis.tardis_portal.views.pages.site_routed_view(request, _default_view, _site_mappings, *args, **kwargs)`

Allows a view to be overridden based on the Site (eg domain) for the current request. Takes a default fallback view (`_default_view`) and a dictionary mapping Django Sites (domain name or int SITE_ID) to views. If the current request matches a Site in the dictionary, that view is used instead of the default.

The intention is to define {site: view} mappings in settings.py, and use this wrapper view in urls.py to allow a single URL to be routed to different views depending on the Site in the request.

Parameters

- `request` (`django.http.HttpRequest`) – a HTTP request object
- `_default_view` (`types.FunctionType` / `str`) – The default view if no Site in `_site_mappings` matches the current Site.
- `_site_mappings` (`dict`) – A dictionary mapping Django sites to views (sites are specified as either a domain name str or int SITE_ID).
- `args` –
- `kwargs` –

Returns A view function

Return type `types.FunctionType`

`tardis.tardis_portal.views.pages.stats(request, *args, **kwargs)`

`tardis.tardis_portal.views.pages.use_rapid_connect(fn)`

A decorator that adds AAF Rapid Connect settings to a get_context_data method.

Parameters `fn` (`types.FunctionType`) – A get_context_data function/method.

Returns A get_context_data function that adds RAPID_CONNECT_* keys to its output context.

Return type `types.FunctionType`

`tardis.tardis_portal.views.pages.user_guide(request)`

`tardis.tardis_portal.views.parameters module`

views to do with metadata, parameters etc. Mostly ajax page inclusions

`tardis.tardis_portal.views.parameters.add_datafile_par(request, *args, **kwargs)`

`tardis.tardis_portal.views.parameters.add_dataset_par(request, *args, **kwargs)`

`tardis.tardis_portal.views.parameters.add_experiment_par(request, *args, **kwargs)`

`tardis.tardis_portal.views.parameters.add_par(request, parentObject, otype, stype)`

`tardis.tardis_portal.views.parameters.edit_datafile_par(request, *args, **kwargs)`

`tardis.tardis_portal.views.parameters.edit_dataset_par(request, *args, **kwargs)`

`tardis.tardis_portal.views.parameters.edit_experiment_par(request, *args, **kwargs)`

`tardis.tardis_portal.views.parameters.edit_parameters(request, parameterSet, otype)`

tardis.tardis_portal.views.upload module

views for uploading files via HTTP

```
tardis.tardis_portal.views.upload.upload_complete(request, template_name='tardis_portal/upload_complete.html')
```

The ajax-loaded result of a file being uploaded

Parameters

- **request** (`django.http.HttpRequest`) – a HTTP Request instance
- **template_name** (`string`) – the path of the template to render

Returns an `HttpResponse`

Return type `django.http.HttpResponse`

tardis.tardis_portal.views.utils module

helper functions used by other views

```
class tardis.tardis_portal.views.utils.HttpResponseMethodNotAllowed(*args, **kwargs)
Bases: django.http.response.HttpResponse
status_code = 303

class tardis.tardis_portal.views.utils.HttpResponseSeeAlso(redirect_to, *args, **kwargs)
Bases: django.http.response.HttpResponseRedirect
status_code = 303

tardis.tardis_portal.views.utils.feedback(request)
tardis.tardis_portal.views.utils.get_dataset_info(dataset, include_thumbnail=False, exclude=None)
tardis.tardis_portal.views.utils.remove_csrf_token(request)
```

rather than fixing the form code that loops over all POST entries indiscriminately, I am removing the csrf token with this hack. This is only required in certain form code and can be removed should this ever be fixed

Module contents

importing all views files here, so that any old code will work as expected, when importing from `tardis.tardis_portal.views`

tardis.tardis_portal.download module

download.py

```
class tardis.tardis_portal.download.UncachedTarStream(mapped_file_objs, filename,
                                                      do_gzip=False, buffer-
                                                      size=131072, comp_level=6,
                                                      http_buffer_size=65535)
```

Bases: `tarfile.TarFile`

Stream files into a compressed tar stream on the fly

`close_gzip()`

`compress(buf)`

`compute_size()`

`get_response(tracker_data=None)`

`make_tar()`

main tar generator. until python 3 needs to be in one function because ‘yield’s don’t bubble up.

`prepare_output(uc_buf, remainder)`

`tarinfo_for_df(df, name)`

`tardis.tardis_portal.download.classic_mapper(rootdir)`

`tardis.tardis_portal.download.download_api_key(request, *args, **kwargs)`

`tardis.tardis_portal.download.download_datafile(request, datafile_id)`

`tardis.tardis_portal.download.get_download_organizations()`

`tardis.tardis_portal.download.make_mapper(organization, rootdir)`

`tardis.tardis_portal.download.streaming_download_datafiles(request)`

takes string parameter “comptype” for compression method. Currently implemented: “tgz” and “tar”. The datafiles to be downloaded are selected using “datafile”, “dataset” or “url” parameters. An “expid” parameter may be supplied for use in the download archive name. If “url” is used, the “expid” parameter is also used to limit the datafiles to be downloaded to a given experiment.

`tardis.tardis_portal.download.view_datafile(request, datafile_id)`

tardis.tardis_portal.email module

```
tardis.tardis_portal.email.build_template_html(template_filename, context)
tardis.tardis_portal.email.build_template_text(template_filename, context)
tardis.tardis_portal.email.email_user(subject, template_filename, context, user)

                                                   instance=None,      use_required_attribute=None)
Bases: django.forms.models.ModelForm

class Meta

    fields = ['author', 'institution', 'email', 'order', 'url']
    model
        alias of tardis.tardis_portal.models.experiment.ExperimentAuthor
base_fields = {'author': <django.forms.fields.CharField object>, 'email': <django.forms.fields.EmailField object>}
```

```
declared_fields = {}

media

class tardis.tardis_portal.forms.ExperimentForm(data=None, files=None,
auto_id='%s', prefix=None, initial=None, error_class=<class
'django.forms.utils.ErrorList'>,
label_suffix=':',
empty_permitted=False, instance=None, extra=0)
```

Bases: django.forms.models.ModelForm

This handles the complex experiment forms.

All internal datasets forms are prefixed with *dataset_*, and all internal dataset file fields are prefixed with *file_*. These are parsed out of the post data and added to the form as internal lists.

```
class FullExperiment(**kwargs)
```

Bases: UserDict.UserDict

This is a dict wrapper that store the values returned from the *tardis.tardis_portal.forms.ExperimentForm.save()* function. It provides a convience method for saving the model objects.

```
save_m2m()
```

```
{‘experiment’: experiment, ‘experiment_authors’: experiment_authors, ‘authors’: authors, ‘datasets’: datasets, ‘datafiles’: datafiles}
```

```
class Meta
```

```
fields = (‘title’, ‘institution_name’, ‘description’)
```

```
model
```

```
alias of tardis.tardis_portal.models.experiment.Experiment
```

```
base_fields = {‘description’: <django.forms.fields.CharField object>, ‘institution_name’: <django.forms.fields.CharField object>}
```

```
declared_fields = {‘url’: <django.forms.fields.CharField object>}
```

```
is_valid()
```

Test the validity of the form, the form may be invalid even if the error attribute has no contents. This is because the returnnd value is dependent on the validity of the nested forms.

This validity also takes into account forign keys that might be dependent on an unsaved model.

Returns validity

Return type bool

```
media
```

```
save(commit=True)
```

```
class tardis.tardis_portal.forms.ImportParamsForm(data=None, files=None,

class tardis.tardis_portal.forms.RegistrationForm(data=None, files=None,
auto_id=u'id_%s', prefix=None,
initial=None, error_class=<class django.forms.utils.ErrorList>,
label_suffix=None, empty_permitted=False,
field_order=None, use_required_attribute=None,
renderer=None)
Bases: django.forms.forms.Form

Form for registering a new user account.

Validates that the requested username is not already in use, and requires the password to be entered twice to catch typos.

Subclasses should feel free to add any additional validation they need, but should avoid defining a save() method – the actual saving of collected user data is delegated to the active registration backend.

base_fields = {'email': <django.forms.fields.EmailField object>, 'password1': <django.forms.fields.CharField object>,
clean()
    Verify that the values entered into the two password fields match. Note that an error here will end up in non_field_errors() because it doesn't apply to a single field.

clean_username()
    Validate that the username is alphanumeric and is not already in use.

```

```
declared_fields = {'email': <django.forms.fields.EmailField object>, 'password1': <d
media
save(**kwargs)

class tardis.tardis_portal.forms.RightsForm(data=None, files=None,
                                             auto_id=u'id_%s', prefix=None,

tardis.tardis_portal.forms.save_datafile_edit_form(parameterset, request)
```

tardis.tardis_portal.hacks module

hacks.py For hacks which should be removed at a later stage

```
tardis.tardis_portal.hacks.oracle_dbops_hack(f)
    affects only oracle - safe for other database engines
```

tardis.tardis_portal.iiif module

```
tardis.tardis_portal.iiif.compliance_header(f)
tardis.tardis_portal.iiif.compute_etag(request, datafile_id, *args, **kwargs)
tardis.tardis_portal.iiif.download_image(request, *args, **kwargs)
tardis.tardis_portal.iiif.download_info(request, *args, **kwargs)
```

tardis.tardis_portal.logging_middleware module

```
class tardis.tardis_portal.logging_middleware.LoggingMiddleware(get_response)
Bases: object

process_exception(request, exception)
process_response(request, response)

tardis.tardis_portal.logging_middleware.get_client_ip(request)
```

tardis.tardis_portal.managers module

managers.py

```
class tardis.tardis_portal.managers.ExperimentManager
Bases: tardis.tardis_portal.managers.OracleSafeManager
```

Implements a custom manager for the Experiment model which checks the authorisation rules for the requesting user first

To make this work, the request must be passed to all class functions. The username and the group memberships are then resolved via the user.userprofile.ext_groups and user objects.

The `tardis.tardis_portal.auth.AuthService` is responsible for filling the `request.groups` object.

all(`user`)

Returns all experiments a user - either authenticated or anonymous - is allowed to see and search

Parameters `user`(`User`) – a User instance

Returns QuerySet of Experiments

Return type QuerySet

external_users(`experiment_id`)

returns a list of groups which have external ACL rules

Parameters `experiment_id`(`int`) – the ID of the experiment to be edited

Returns list of groups with external ACLs

Return type list

get (*user, experiment_id*)

Returns an experiment under the consideration of the ACL rules Raises PermissionDenied if the user does not have access.

Parameters

- **user** (*User*) – a User instance
- **experiment_id** (*int*) – the ID of the experiment to be edited

Returns Experiment

Return type *Experiment*

Raises **PermissionDenied** –

group_acls_system_owned (*experiment_id*)

Returns a list of ACL rules associated with this experiment.

Parameters **experiment_id** (*int*) – the ID of the experiment

Returns QuerySet of system-owned ACLs for experiment

Return type QuerySet

group_acls_user_owned (*experiment_id*)

Returns a list of ACL rules associated with this experiment.

Parameters **experiment_id** (*int*) – the ID of the experiment

Returns QuerySet of ACLs

Return type QuerySet

owned (*user*)

Return all experiments which are owned by a particular user, including those shared with a group of which the user is a member.

Parameters **user** (*User*) – a User instance

Returns QuerySet of Experiments owned by user

Return type QuerySet

owned_and_shared (*user*)

owned_by_group (*group*)

Return all experiments that are owned by a particular group

owned_by_user (*user*)

Return all experiments which are owned by a particular user id

Parameters **user** (*User*) – a User Object

Returns QuerySet of Experiments owned by user

Return type QuerySet

owned_by_user_id (*userId*)

Return all experiments which are owned by a particular user id

Parameters **userId** (*int*) – a User ID

Returns QuerySet of Experiments owned by user id

Return type QuerySet

public ()

shared(*user*)

system_owned_groups(*experiment_id*)

returns a list of system-owned groups which have ACL rules associated with this experiment

Parameters **experiment_id**(*string*) – the ID of the experiment to be edited

Returns system owned groups for experiment

Return type QuerySet

user_acls(*experiment_id*)

Returns a list of ACL rules associated with this experiment.

Parameters **experiment_id**(*string*) – the ID of the experiment

Returns QuerySet of ACLs

Return type QuerySet

user_owned_groups(*experiment_id*)

returns a list of user owned-groups which have ACL rules associated with this experiment

Parameters **experiment_id**(*int*) – the ID of the experiment to be edited

Returns QuerySet of non system Groups

Return type QuerySet

users(*experiment_id*)

Returns a list of users who have ACL rules associated with this experiment.

Parameters **experiment_id**(*int*) – the ID of the experiment

Returns QuerySet of Users with experiment access

Return type QuerySet

class `tardis.tardis_portal.managers.OracleSafeManager`

Bases: `django.db.models.manager.Manager`

Implements a custom manager which automatically defers the retrieval of any TextField fields on calls to `get_queryset`. This is to avoid the known issue that ‘distinct’ calls on `query_sets` containing TextFields fail when Oracle is being used as the backend.

get_queryset()

Returns a new QuerySet object. Subclasses can override this method to easily customize the behavior of the Manager.

class `tardis.tardis_portal.managers.ParameterNameManager`

Bases: `django.db.models.manager.Manager`

get_by_natural_key(*namespace*, *name*)

class `tardis.tardis_portal.managers.SchemaManager`

Bases: `django.db.models.manager.Manager`

get_by_natural_key(*namespace*)

`tardis.tardis_portal.rfc3339 module`

The function `rfc3339` formats dates according to the [RFC 3339](#). `rfc3339` tries to have as much as possible sensible defaults.

tardis.tardis_portal.rfc3339.**rfc3339**(*date*, *utc=False*, *use_system_timezone=True*)

Return a string formatted according to the [RFC 3339](#). If called with *utc=True*, it normalizes *date* to the UTC date. If *date* does not have any timezone information, uses the local timezone:

```
>>> date = datetime.datetime(2008, 4, 2, 20)
>>> rfc3339(date, utc=True, use_system_timezone=False)
'2008-04-02T20:00:00Z'
>>> rfc3339(date)
'2008-04-02T20:00:00...'
```

If called with *user_system_time=False* don't use the local timezone and consider the offset to UTC to be zero:

```
>>> rfc3339(date, use_system_timezone=False)
'2008-04-02T20:00:00+00:00'
```

date must be a a *datetime.datetime*, *datetime.date* or a timestamp as returned by *time.time()*:

```
>>> rfc3339(0, utc=True, use_system_timezone=False)
'1970-01-01T00:00:00Z'
>>> rfc3339(datetime.date(2008, 9, 6), use_system_timezone=False)
'2008-09-06T00:00:00+00:00'
>>> rfc3339('foo bar')
Traceback (most recent call last):
...
TypeError: expected datetime, got str instead
```

tardis.tardis_portal.search_backend module

```
class tardis.tardis_portal.search_backend.HighlightSearchBackend(connection_alias,
                                                               **connection_options)
Bases: haystack.backends.elasticsearch_backend.ElasticsearchSearchBackend

search(query_string, sort_by=None, start_offset=0, end_offset=None, fields='', highlight=False, facets=None, date_facets=None, query_facets=None, narrow_queries=None, spelling_query=None, limit_to_registered_models=None, result_class=None, **kwargs)
```

tardis.tardis_portal.search_query module

search_backend.py

```
class tardis.tardis_portal.search_query.FacetFixedSearchQuery(using=u'default')
Bases: haystack.backends.elasticsearch_backend.ElasticsearchSearchQuery

get_facet_counts()
```

tardis.tardis_portal.shortcuts module

```
class tardis.tardis_portal.shortcuts.RestfulExperimentParameterSet(schema_func,
                                                               form_cls)
Bases: object
```

Helper class which enables a Backbone.sync-compatible interface to be created for a ExperimentParameterSet just by specifying a function which provides the schema and a form.

(A function for the schema is required rather than the actual schema, as to run unit tests effectively the object needs to be able to create the schema after instantiation.)

For UI consistency, it's best to make sure the schema has `hidden == true`.

schema

Use schema function to get the schema.

view_functions

```
tardis.tardis_portal.shortcuts.get_experiment_referer(request, dataset_id)
tardis.tardis_portal.shortcuts.redirect_back_with_error(request, message)
tardis.tardis_portal.shortcuts.render_error_message(request, message, status=400)
    Render a simple text error message in a generic error page. Any newlines are turned into <br>.

tardis.tardis_portal.shortcuts.render_response_index(request, *args, **kwargs)
tardis.tardis_portal.shortcuts.render_response_search(request, url, c)
tardis.tardis_portal.shortcuts.render_to_file(template, filename, context)
tardis.tardis_portal.shortcuts.return_response_error(request)
tardis.tardis_portal.shortcuts.return_response_error_message(request,      redirect_path, context)
tardis.tardis_portal.shortcuts.return_response_not_found(request)
```

tardis.tardis_portal.signals module

tardis.tardis_portal.tasks module

```
tardis.tardis_portal.tasks.get_response(_)
tardis.tardis_portal.tasks.init_filters()
    load filters and avoid circular import
```

tardis.tardis_portal.util module

```
tardis.tardis_portal.util.generate_file_checksums(sourceFile,      tempFile=None,
                                                leave_open=False)
    DEPRECATED Generate checksums, etcetera for a file read from 'sourceFile'. If 'tempFile' is provided, the bytes are written to it as they are read. The result is a tuple comprising the MD5 checksum, the SHA512 checksum, the file length, and chunk containing the start of the file (for doing mimetype guessing if necessary).
```

`tardis.tardis_portal.util.get_filesystem_safe_dataset_name(dataset)`

Given a Dataset, return a filesystem safe string representing the dataset. Useful for filenames for dataset downloads, maybe URLs.

Parameters `dataset` (`tardis.tardis_portal.models.dataset.Dataset`) – A Dataset object.

Returns A filesystem safe string as a Dataset name.

Return type basestring

`tardis.tardis_portal.util.get_filesystem_safe_experiment_name(experiment)`

Given an Experiment, return a filesystem safe string representing the experiment. Useful for filenames for experiment downloads, maybe URLs.

Parameters `experiment` (`tardis.tardis_portal.models.experiment.Experiment`) – A Experiment object.

Returns A filesystem safe string as a Experiment name.

Return type basestring

`tardis.tardis_portal.util.get_free_space(fs_dir)`

Return free space on the file system holding the given directory (in bytes). This should work on Linux, BSD, Mac OSX and Windows.

`tardis.tardis_portal.util.get_local_time(dt)`

Ensure datetime is timezone-aware and in local time.

If the USE_TZ setting in the current dev version of Django comes in, this *should* keep providing correct behaviour.

`tardis.tardis_portal.util.get_utc_time(dt)`

Ensure datetime is timezone-aware and in UTC time.

If the USE_TZ setting in the current dev version of Django comes in, this *should* keep providing correct behaviour.

`tardis.tardis_portal.util.render_mustache(template_name, data)`

`tardis.tardis_portal.util.render_public_access_badge(experiment)`

`tardis.tardis_portal.util.split_path(p)`

`tardis.tardis_portal.widgets module`

`class tardis.tardis_portal.widgets.CommaSeparatedInput(attrs=None)`

Bases: `django.forms.widgets.TextInput`

`media`

`render(name, value, attrs=None, renderer=None)`

`value_from_datadict(data, files, name)`

`class tardis.tardis_portal.widgets.Label(attrs=None)`

Bases: `django.forms.widgets.Widget`

`media`

`render(name, value, attrs=None)`

`tag = 'label'`

`class tardis.tardis_portal.widgets.Span(attrs=None)`

Bases: `tardis.tardis_portal.widgets.Label`

`media`

`tag = 'span'`

`tardis.tardis_portal.xmlwriter module`

`class tardis.tardis_portal.xmlwriter.XMLWriter`

`static write_template_to_dir(dest_dir, dest_filename, template_path, context)`

Parameters

- **dest_dir** (*string*) – The directory to store the resulting document in
- **dest_filename** (*string*) – The name of the file to be output
- **template_path** (*string*) – The relative path to the Django template to be rendered
- **context** (`django.template.context.Context`) – The Context object (dictionary of variables for template output)

Returns The full path to the created file

Return type string

```
static write_template_to_file(prefix_dir, objectprefix, uniqueid, templatepath, context)
```

Parameters

- **prefix_dir** (*string*) – The subdirectory off of the OAI_DOCS_PATH to store the resulting document in
- **objectprefix** (*string*) – The name prefix of the resulting file. Files are output in the format prefix-uniqueid.xml
- **uniqueid** (*string*) – The unique ID of the file to be output
- **templatepath** (*string*) – The relative path to the Django template to be rendered
- **context** (`django.template.context.Context`) – The Context object (dictionary of variables for template output)

Returns The full path to the created file

Return type string

```
static write_xml_to_file(prefix_dir, objectprefix, uniqueid, xmlstring)
```

Parameters

- **prefix_dir** (*string*) – The subdirectory off of the OAI_DOCS_PATH to store the resulting document in
- **objectprefix** (*string*) – The name prefix of the resulting file. Files are output in the format prefix-uniqueid.xml
- **uniqueid** (*string*) – The unique ID of the file to be output
- **xmlstring** (*string*) – The relative path to the Django template to be rendered

Returns The full path to the created file

Return type string

```
tardis.tardis_portal.xmlwriter.logger = <logging.Logger object>
XML Writer
```

A set of static methods for writing xml files.

class `tardis.app_config.AbstractTardisAppConfig(app_name, app_module)`

Bases: `django.apps.config.AppConfig`

All MyTardis app configuration classes should extend this abstract class to have their APIs and URLs automatically added to URL routing.

`app_dependencies = []`

`tardis.app_config.check_app_dependencies(app_configs, **kwargs)`

Checks currently installed apps for dependencies required by installed apps as defined by the `app_dependencies` attribute of the `AppConfig` object, if present.

Parameters

- `app_configs` (`AppConfig`) – a list of `app_configs` to check, or `None` for all apps to be checked

- **kwargs** (*list of args*) – unknown list of args

Returns a list of unsatisfied dependencies

Return type list of strings

`tardis.app_config.format_app_name_for_url(name)`

`tardis.app_config.get_tardis_apps()`

Gets a list of tuples where the first element is the app name, and the second is the module path

Returns a list of tardis apps

Return type list of apps

`tardis.app_config.is_tardis_app(app_config)`

Determines whether the installed app is a MyTardis app

Parameters `app_config` (`AppConfig`) – the AppConfig object of an installed app

Returns True if the app is a MyTardis app, False otherwise

Return type `bool`

11.4 Documentation for included Apps

11.4.1 Apps and Contextual Views

Introduction

In order to better represent specific data types and facilities, MyTardis allows apps to override the default views for Experiments, Datasets, DataFile metadata, and the main index and login pages. The following sections detail settings and requirements of apps to make this happen.

Datafile Views

Rationale

By default there exists an option to show the metadata of individual DataFile s in the default Dataset view. Some kinds of files allow for rich and useful visualisation and/or processing. For this purpose there exist contextual views, views that are available depending on the type of file they refer to.

User Guide

A default installation has no contextual views. To enable them a few steps are needed:

- an app needs to be installed either in `tardis/apps/`, or the app's configuration must subclass `AbstractTardisAppConfig` thereby enabling autodetection. `AbstractTardisAppConfig` replaces `AppConfig` as described in these [django docs](#).
- DataFile s need to be manually or automatically tagged with a schema that identifies them as viewable with a particular view. Filters are a convenient way to do this. See below for an example.
- settings need to be added to `settings.py`. A list called `DATAFILE_VIEWS` holds a tuple for each available view. The first entry of the tuple is a schema namespace and is matched against all schemas attached to the DataFile. If a match occurs, a link to the url given as second entry of the tuple is added to the Datafile Detail section of the default Dataset view and loaded via AJAX on demand. Example:

```
DATAFILE_VIEWS = [("http://example.org/schemas/datafile/my_awesome_schema",
                   "/apps/my-awesome-app/view"), ]
```

Currently, the default view is always DataFile metadata. This can be changed, for example, by developing a custom Dataset view, which is explained in the following section.

Dataset and Experiment Views

Rationale

For some specific uses the data available can be presented and/or processed in useful ways. MyTardis allows views for Experiments and Datasets to be overridden by apps on a per-schema basis, allowing custom views for specific data types. The example that this feature was built for are single-image and many-image datasets from the Australian Synchrotron. Single images can be displayed large and for a many-image dataset it is more useful to show a couple of example images taken at regular intervals not from the beginning of the set of files. These different datasets can be detected via their schema namespace and displayed differently.

User Guide

Akin to DataFile contextual views, Dataset and Experiment contextual views rely on matching a specific schema namespace in an attached ParameterSet.

Existing schemas can be used, or a special schema intended only for tagging an Experiment or Dataset for contextual view override can be attached (via an otherwise empty ParameterSet).

Dataset and Experiment contextual views are configured in settings by associating a schema namespace with a class-based view (or view function).

Unlike DataFile contextual views which inject content into the DOM via an AJAX call, these contextual views override the entire page.

Example:

```
DATASET_VIEWS = [
    ('http://example.org/schemas/dataset/my_awesome_schema',
     'tardis.apps.my_awesome_app.views.CustomDatasetViewSubclass'),
]

EXPERIMENT_VIEWS = [
    ('http://example.org/schemas/expt/my_awesome_schema',
     'tardis.apps.my_awesome_app.views.CustomExptViewSubclass'),
]
```

Custom Index View

Rationale

Specific sites or facilities often want to display a custom index page that presents recently ingested experiments in a way which is more meaningful for their particular domain or application. MyTardis support overriding the index page (/) on a per-domain or per-Site basis.

User Guide

Example:

```
INDEX_VIEWS = {
    1: 'tardis.apps.my_custom_app.views.MyCustomIndexSubclass',
    'facility.example.org': 'tardis.apps.myapp.AnotherCustomIndexSubclass'
}
```

A custom view override is defined in settings as dictionary mapping a class-based view (or view function) to a Django Site. A Site is specified by SITE_ID (an integer) or the domain name of the incoming request.

Developers creating custom contextual index views are encouraged to subclass `tardis.tardis_portal.views.pages.IndexView`.

Custom Login View

Rationale

Specific sites or facilities may want to display a custom login page that which is more meaningful to their particular domain or application. MyTardis supports overriding the login page (/login) on a per-domain or per-Site basis.

User Guide

Example:

```
LOGIN_VIEWS = {
    1: 'tardis.apps.my_custom_app.views.MyCustomLoginViewClass',
    'facility.example.org': 'tardis.apps.myapp.AnotherCustomLoginViewClass'
}
```

A custom view override is defined in settings as dictionary mapping a class-based view (or view function) to a Django Site. A Site is specified by SITE_ID (an integer) or the domain name of the incoming request.

Good practice for app developers

In order to benefit from future bug and security fixes in core MyTardis, app developers are strongly encouraged to override `IndexView`, `DatasetView` and `ExperimentView` (from `tardis.tardis_portal.pages`) when creating custom contextual views.

The default and well-tested `index.html`, `login.html`, `view_dataset.html` and `view_experiment.html` templates can be used as a basis for these custom contextual views.

New versions may change the default templates and view functions. If you copy and paste parts for your application, please check with each upgrade that you are still using up to date code.

11.4.2 OAI-PMH Producer

Using to provide RIF-CS

Minimal providers for Dublin Core and RIF-CS are included in the app.

To enable the app, include `tardis.apps.oaipmh` in `settings.INSTALLED_APPS`.

Your OAI-PMH query endpoint will be on: <http://mytardis-example.com/apps/oaipmh/>

Implementing your own providers

To allow multiple metadata formats (and types within them) the `tardis.apps.oaipmh.server.ProxyingServer` handles all requests and proxies them to the providers specified in `settings.OAIPMH_PROVIDERS`.

You should extend `tardis.apps.oaipmh.provider.base.BaseProvider` or one of the existing providers if you wish to extend the functionality in a site-specific way.

class `tardis.apps.oaipmh.provider.base.BaseProvider(site)`

A base provider which roughly implements the PyOAI interface for OAI-PMH servers.

Extend this if you're writing your own provider for a new type or a different metadata format.

getRecord(metadataPrefix, identifier)

Get a record for a metadataPrefix and identifier.

Parameters

- **metadataPrefix** (*string*) – identifies metadata set to retrieve
- **identifier** (*string*) –
 - repository-unique identifier of record

Raises

- **oaipmh.error.CannotDisseminateFormatError** – if metadataPrefix is unknown or not supported by identifier.
- **oaipmh.error.IdDoesNotExistError** – if identifier is unknown or illegal.

Returns a header, metadata, about tuple describing the record.

identify()

Retrieve information about the repository.

Returns an Identify object describing the repository.

listIdentifiers (metadataPrefix, set=None, from_=None, until=None)

Get a list of header information on records.

Parameters

- **metadataPrefix (string)** – identifies metadata set to retrieve
- **set (string)** – set identifier; only return headers in set
- **from (datetime)** – only retrieve headers from **from_** date forward (in naive UTC)
- **until (datetime)** – only retrieve headers with dates up to and including until date (in naive UTC)

Raises

- **error.CannotDisseminateFormatError** – if metadataPrefix is not supported by the repository.
- **error.NoSetHierarchyError** – if the repository does not support sets.

Returns an iterable of headers.

listMetadataFormats (identifier=None)

List metadata formats supported by repository or record.

Parameters **identifier (string)** – identify record for which we want to know all supported metadata formats. If absent, list all metadata formats supported by repository.

Raises

- **error.IdDoesNotExistError** – if record with identifier does not exist.
- **error.NoMetadataFormatsError** – if no formats are available for the indicated record.

Returns an iterable of metadataPrefix, schema, metadataNamespace tuples (each entry in the tuple is a string).

listRecords (metadataPrefix, set=None, from_=None, until=None)

Get a list of header, metadata and about information on records.

Parameters

- **metadataPrefix (string)** – identifies metadata set to retrieve
- **set (string)** – set identifier; only return records in set
- **from (datetime)** – only retrieve records from **from_** date forward (in naive UTC)
- **until (datetime)** – only retrieve records with dates up to and including until date (in naive UTC)

Raises

- `oaipmh.error.CannotDisseminateFormatError` – if metadataPrefix is not supported by the repository.
- `oaipmh.error.NoSetHierarchyError` – if the repository does not support sets.

Returns an iterable of header, metadata, about tuples.

listSets()

Get a list of sets in the repository.

Raises `error.NoSetHierarchyError` – if the repository does not support sets.

Returns an iterable of setSpec, setName tuples (strings).

writeMetadata(element, metadata)

Create XML elements under the given element, using the provided metadata.

Should avoid doing any model-lookups, as they should be done when creating the metadata.

Parameters

- `element (lxml.etree.Element)` – element to put all content under (as SubElements)
- `metadata (oaipmh.common.Metadata)` – metadata to turn into XML

Raises `NotImplementedError` – not implemented

class tardis.apps.aoipmh.server.ProxyingServer(providers)

getRecord(metadataPrefix, identifier)

Get a record for a metadataPrefix and identifier.

Raises

- `oaipmh.error.CannotDisseminateFormatError` – if no provider returns a result, but at least one provider responds with `oaipmh.error.CannotDisseminateFormatError` (meaning the identifier exists)
- `oaipmh.error.IdDoesNotExistError` – if all providers fail with `oaipmh.error.IdDoesNotExistError`

Returns first successful provider response

Return type response

identify()

Retrieve information about the repository.

Returns an `oaipmh.common.Identify` object describing the repository.

Return type `oaipmh.common.Identify`

listIdentifiers(metadataPrefix, **kwargs)

Lists identifiers from all providers as a single set.

Raises

- `error.CannotDisseminateFormatError` – if metadataPrefix is not supported by the repository.
- `error.NoSetHierarchyError` – if a set is provided, as the repository does not support sets.

Returns a `set.Set` of headers.

Return type `set`

listMetadataFormats (`**kwargs`)

List metadata formats from all providers in a single set.

Raises

- `error.IdDoesNotExistError` – if record with identifier does not exist.
- `error.NoMetadataFormatsError` – if no formats are available for the indicated record, but it does exist.

Returns a *frozenset* of metadataPrefix, schema, metadataNamespace tuples (each entry in the tuple is a string).

Return type `frozenset`

listRecords (`metadataPrefix, **kwargs`)

Lists records from all providers as a single set.

Raises

- `error.CannotDisseminateFormatError` – if metadataPrefix is not supported by the repository.
- `error.NoSetHierarchyError` – if a set is provided, as the repository does not support sets.

Returns a `set`. Set of header, metadata, about tuples.

Return type `set`

listSets ()

List sets.

Raises `caipmh.error.NoSetHierarchyError` – because set hierarchies are currently not implemented

11.4.3 MyTardis Social Authentication

Usage

To enable the app, include `tardis.apps.social_auth` in `settings.INSTALLED_APPS`.

Adding backends

You will need to add authentication backends that you want to enable. To enable Google authentication add following AUTHENTICATION_BACKENDS to `settings.py`

```
AUTHENTICATION_BACKENDS += (
    'social_core.backends.open_id.OpenIdAuth',
    'social_core.backends.google.GoogleOpenId',
    'social_core.backends.google.GoogleOAuth2',
)
```

To enable Australian Access federation(AAF) OpenID connect Provider(OIDC) authentication add following AUTHENTICATION_BACKENDS to `settings.py`

```
AUTHENTICATION_BACKENDS += (
    'tardis.apps.social_auth.auth.authorisation-AAFOpenId',
)
```

Adding authentication providers

You will need add authentication providers that you want to enable.

```
AUTH_PROVIDERS += (
    ('Google', 'Google',
     'social_core.backends.google.GoogleOAuth2'),
    ('AAF', 'AAF',
     'tardis.apps.social_auth.auth.authorisation-AAFOpenId'),
)
```

Adding Exception Middleware

You may want to add exception middleware provided by *python-social-auth*. To do this add following to *settings.py*

```
MIDDLEWARE += (
    'social_django.middleware.SocialAuthExceptionMiddleware',
)
```

Adding Context Processor

You will need to add following context processor to *settings.py*

```
TEMPLATES[0]['OPTIONS']['context_processors'].extend([
'social_django.context_processors.backends',
'social_django.context_processors.login_redirect'])
```

Application setup

Once the application is enabled and installed define the following settings to enable authentication behaviour.

```
SOCIAL_AUTH_AAF_PIPELINE = (
    'social_core.pipeline.social_auth.social_details',
    'social_core.pipeline.social_auth.social_uid',
    'social_core.pipeline.social_auth.social_user',
    'social_core.pipeline.user.get_username',
    'social_core.pipeline.user.create_user',
    'tardis.apps.social_auth.auth.social_auth.add_authentication_method',
    'tardis.apps.social_auth.auth.social_auth.approve_user_auth',
    'tardis.apps.social_auth.auth.social_auth.add_user_permissions',
    'social_core.pipeline.social_auth.associate_user',
    'social_core.pipeline.social_auth.load_extra_data',
    'social_core.pipeline.user.user_details',
)
```

```
SOCIAL_AUTH_GOOGLE_OAUTH2_PIPELINE = (
    'social_core.pipeline.social_auth.social_details',
    'social_core.pipeline.social_auth.social_uid',
    'social_core.pipeline.social_auth.social_user',
    'social_core.pipeline.user.get_username',
    'social_core.pipeline.user.create_user',
    'tardis.apps.social_auth.auth.social_auth.add_authentication_method',
    'social_core.pipeline.social_auth.associate_user',
    'social_core.pipeline.social_auth.load_extra_data',
    'social_core.pipeline.user.user_details',
    'tardis.apps.social_auth.auth.social_auth.send_admin_email',
)
```

Get key and secrets from the OIDC provider that you want to enable and add following settings.

```
SOCIAL_AUTH_URL_NAMESPACE_BEGIN = 'social:begin',
SOCIAL_AUTH_GOOGLE_OAUTH2_KEY = 'Get this from Google'
SOCIAL_AUTH_GOOGLE_OAUTH2_SECRET = 'Get this from Google'
SOCIAL_AUTH_AAF_KEY = 'Get this from AAF'
SOCIAL_AUTH_AAF_SECRET = 'Get this from AAF'
SOCIAL_AUTH_AAF_AUTH_URL = 'Get this from AAF'
SOCIAL_AUTH_AAF_TOKEN_URL = 'Get this from AAF'
SOCIAL_AUTH_AAF_USER_INFO_URL = 'Get this from AAF'
```

11.5 Releases

11.5.1 4.1

- Bootstrap upgraded to v3.4.0
- Celery upgraded to v4.2.1
- RabbitMQ task priorities support, dropping support for Redis
- Storage box related tasks are annotated with the storage box name, visible in “celery inspect active”.
- New Travis CI webhook to run Pylint and unit tests with Python 3
- New task for clearing Django sessions
- New timestamps (created and modified) in facility and instrument models
- Fixed truncated TAR download issue with unverified files
- Fixed sharing with AAF/Google issue
- Fixed some broken Font Awesome icons
- Made autocache task more efficient.
- **Some dependency updates:**
 - Update amqp from 2.3.2 to 2.4.1
 - Update billiard from 3.5.0.4 to 3.5.0.5
 - Update Bootstrap from 2.3.2 to 3.4.0
 - Update bleach from 2.1.4 to 3.1.0
 - Update celery from 3.1.26.post2 to 4.2.1

- Update coverage from 4.5.1 to 4.5.2
- Update django from 1.11.16 to 1.11.20
- Update django-extensions from 1.8.1 to 2.5
- Update flexmock from 0.10.2 to 0.10.3
- Update gevent from 1.3.6 to 1.4.0
- Update gunicorn from 19.7.1 to 19.9.0
- Update kombu from 4.2.1 to 4.3.0
- Update lxml from 4.2.5 to 4.3.1
- Update mysqlclient from 1.3.13 to 1.4.2
- Update pillow from 5.2.0 to 5.4.1
- Update psycopg2-binary from 2.7.5 to 2.7.7
- Update pyjwt from 1.6.4 to 1.7.1
- Update pylint from 1.9.3 to 1.9.4
- Update python-dateutil from 2.7.5 to 2.8.0
- Update python-ldap from 2.4.27 to 3.1.0
- Update pytz from 2018.5 to 2018.9
- Update requests from 2.19.1 to 2.21.0
- Update selenium from 3.14.1 to 3.141.0
- Update six from 1.11.0 to 1.12.0
- Update social-auth-app-django from 3.0.0 to 3.1.0
- Update sphinx from 1.8.1 to 1.8.4
- Update sphinx-rtd-theme from 0.4.1 to 0.4.3
- Update urllib3 from 1.23 to 1.24.1
- Update wand from 0.4.4 to 0.5.0

11.5.2 4.0

- Django 1.11
- jQuery 3.3.1
- Improved test coverage
- Continuous Integration tests run against Ubuntu 18.04 (MyTardis v3.x used 14.04)
- ChromeDriver is used for BDD (Behaviour Driven Development) tests
- Social Auth, including AAF and Google Auth via OpenID Connect
- Migrating user accounts from LDAP or localdb to OpenID Connect
- Customizable user menu
- Using message.level_tag instead of message.tags in portal_template, so that extra tags can be added to Django messages without interfering with the Bootstrap alert class.

- My Data page (which previously contained Owned and Shared experiments) has been split into two pages - “My Data” and “Shared” - Each page loads thumbnails asynchronously for faster initial page load time - An improved pagination widget allows for a very large number of pages.
- Index page’s thumbnails are loaded asynchronously for faster initial page load time.
- Login page can be replaced with a site-specific page
- SFTP can now be used with keys instead of passwords
- Upgraded Bootstrap from 2.0.4 to 2.3.2 (further upgrades coming soon)
- Fixed some bugs in single search
- jQuery code is being moved out of HTML templates and into JS files which can be linted (with ESLint) and tested (with QUnit).
- **Removed old broken code and unnecessary code which is duplicated in other repositories.**
 - Import via staging with jsTree
 - Uploadify
- **Updated or removed (as appropriate) some out-of-date JS dependencies bundled within the MyTardis repository**
 - Most JS dependences are installed by npm now, so we can run security checks with npm audit
- manage.py can now be used instead of mytardis.py and mytardis.py will soon be deprecated
- New support email setting can be used in email templates or HTML templates.
- Updating loadschemas management command for Django 1.11 and adding test for it
- Updated the dumpschemas management command for Django 1.11 and added a test for it
- **Bug fixes (GitHub Issue numbers below)** Fixed #243. Bug in tardis_acls.change_experiment permissions check Fixed #516 - only show “Add files” button if user has permission to upload files Fixed #636 Fixed #637 - “()” is added to “Author” line every time an experiment is edited Fixed #779 Fixed #868 Fixed #893 Fixed #988 Fixed #1083 Fixed #1185
- Added docs on X-Forwarded-Proto HTTP header for HTTPS deployments
- Added docs on configuring services in systemd or supervisor
- Removed password length restriction in linked user authentication form
- Removed settings_changeme - use default_settings instead
- Removed backslash from set of characters used to generate secret key.
- Removed django-celery - it is no longer necessary to run Celery via Django
- Improved forwards compatibility with Python 3, but we’re not fully Python 3 compatible yet.
- Switched to PEP 328 relative imports
- Tests no longer require the unmaintained “compare” module
- Added a default value for DATA_UPLOAD_MAX_MEMORY_SIZE (required by Django 1.10+) to default settings
- Removed some unused dependencies, e.g. PyYAML
- Removed the createmysuperuser which is no longer needed
- Removed the checkhashes management command
- Removed the diffraction image filter

- Removed the backupdb management command
- Removed the old publication form - a new publication workflow is coming soon.

11.5.3 3.9

- Added deprecation warnings for functionality which will be removed in 4.0
- Added INTERNAL_IPS to default settings for template debugging on localhost
- Disabled the old publication forms app in default settings, and ensured that MyTardis didn't attempt to access its static content when disabled
- Removed apps code from ExperimentView's get_context_data which assumed that each app would provide a views module with an index
- Fixed a bug where creating a group which already existed gave a 500 error
- Fixed a bug where non-ASCII characters in experiment names could break SFTP
- Made dataset thumbnails optional - disabling them can improve page load times
- Fixed a bug which had made it difficult to delete a DataFileObject without a URI from the Django shell
- Fixed a bug which made search indexing fail when there were users with non-ASCII characters in their first or last name

11.5.4 3.8.1

- Fix regression in Push To app

11.5.5 3.8

- Refactored settings
- Added pagination to My Data view
- BDD tests using behave and phantomjs
- Added download MD5 checksum buttons to Dataset View
- Add *autocaching* task that allows data from a StorageBox to be cached to another StorageBox
- Re-wrote user documentation and switched to hosting docs on RTD
- Switched to using NPM to manage JS deps.
- Facility and instrument are now visible on Experiment and dataset views - thanks @avrljk
- Added setting that allows datasets ordered by id on the Experiment page.
- Added setting to make sha512 checksums optional.

11.5.6 3.7 - 17 March 2016

- DataFile size is now a BigInteger field
- New settings for customisations, contextual view overrides (eg INDEX_VIEWS).
- A new AbstractTardisAppConfig class that all new tardis apps should subclass

- Third-party tardis app dependency checking
- Removed database index from Parameter.string_value to allow longer strings in Postgres. Migrations add a Postgres partial index for string_values shorter than 256 characters.
- Changed constraints on the instrument model; facility and instrument name are now unique together
- changed method tasks to task functions, pre-empting the removal of methods tasks in new celery versions
- RESTful API now supports ordering, e.g. &order_by=-title, for Experiments, Datasets and DataFiles.
- Allowed groups to be ‘owners’ of an Experiment. Enforce rule in views for web UI requiring every Experiment to have at least one user owner.
- Registration support updated for latest django-registration-redux package
- Speed-ups for dataset view page loading for datasets with large numbers of images. The carousel is now limited to a maximum of 100 preview images.
- Reorganised and updated documentation

11.5.7 3.6 - 16 March 2015

- removed legacy operations files (foreman, apache, uwsgi, etc)
- moved CI from Travis CI to Semaphore app
- removed buildout build system and setup.py dependency management
- build instructions in build.sh, using requirements.txt for dependencies now
- gunicorn instead of uwsgi
- updated Django to version 1.6.10
- removed migrations app
- renamed Dataset_File to DataFile
- DataFile have a deleted and a version flag, for upcoming support of these features.
- verifying files does not have side-effects anymore
- renamed Author_Experiment to ExperimentAuthor
- an ExperimentAuthor can now have an email and or a URL
- recoded Replica and Location as DataFileObject with associated StorageBox, based on the Django File API
- API v1 got some additions, largely or fully backwards-compatible
- a publication workflow app, guided publication of data
- download data via SFTP using a built-in SFTP server
- removed most traces of METS
- AAF authentication support
- parameters that can store a generic foreign key (link to any database object)
- new models Instrument and Facility
- basic support for SquashFS archives as StorageBox. Probably requires installation-specific code such as what is used at the [Australian Synchrotron](#).
- error pages are no normal-sized

- new view “Facility Overview”, for facility administrators to have overview over data.
- “MyData” includes owned and shared data
- safely allowing HTML in descriptions now. Achieved by “bleaching” of tags
- stats page faster through DB-server-side aggregation
- layout improvements
- pep8 and pylint improvements
- bug fixes

11.5.8 3.5 - 26 August 2013

- REST API
- REST API keys
- Authorisation now supports object-level permissions
- Front page overview
- Contextual views for Datafiles, Datasets and Experiments
- Backwards incompatible database changes
- Replica multi file location support
- Migration of replicas
- Streaming downloads
- Django 1.5
- REDIS option for celery queue
- auto-verify files
- provisional directory support
- Pylint testing on Travis CI
- Some error pages are now functional
- optionally upload comfortably with Filepicker.io
- Experiment view page load speedup
- Removed ancient XML ingest format.

11.5.9 3.0 - unreleased

- Twitter Bootstrap
- javascript templates
- backbone.js rendering of datasets
- UI for transferring datasets
- bpython shell
- celery queue

11.5.10 2.0 - Unreleased

- Auth/Auth redesign [Gerson, Uli, Russel]
 - Authorisation. Support for several pluggable authorisation plugins (Django internal, LDAP, VBL). The added AuthService middleware provides a mechanism to query all available auth modules to determine what group memberships a user has.
 - Alternative authorisation. Rule based experiment access control engine was implemented with the following access attributes for individual users and groups: canRead, canWrite, canDelete, isOwner. Additionally, a time stamp can be specified for each access rule.

Further information can be found at the wiki: [Authorisation Engine design](#)

- Metadata Editing [Steve, Grischa]
- New METS parser & METS exporter [Gerson]
- Dist/Buildout infrastructure [Russell]
- Through the web creation and editing of experiments [Steve, Russell]
- Through the web upload of files [Steve]
- Download protocol handler [Russel, Uli]
- Logging framework [Uli]
- Django 1.3

11.5.11 1.07 - 01/06/2010

- Publish to [tardis.edu.au](#) interface created, though not implemented, pending legal text

11.5.12 1.06 - 15/03/2010

- Parameter import interface for creation of new parameter/schema definitions
- iPhone Interface

11.5.13 1.05 - 01/03/2010

- Images as parameters supported
- Data / metadata transfer from synchrotron is now ‘threaded’ using asynchronous web service transfers.

11.5.14 1.0 - 01/02/2010

- MyTardis created from existing MyTardis python / django codebase
- Allows private data to be stored
- Open key/value parameter model, replacing current crystallography one
- Internal data store for data
- LDAP Login
- Pagination of files

- Creation of synchrotron-tardis from MyTardis codebase including specific code for the VBL login service and data transfer to MyTardis deployments.
- Web server changed to apache and mod_wsgi

11.5.15 0.5 - 2009

- Re-wrote federated index (python / django)
- Federated stores are now simple web server based with optional FTP access
- Runs on Jython / Tomcat

11.5.16 0.1 - 2007

- Federated index (php) running on Apache HTTP Server
- Crystallography data deposition and packaging tools for Fedora Commons (java swing desktop)
- Search Interface via web

CHAPTER 12

Indices and tables

- genindex
- modindex
- search
