```
$ orgnote i[TAB]
$ orgnote init
```

2016-04-03 Leslie Zhu <pythonisland@gmail.com>

- orgnote/parser.py (OrgNote.contain_page): use bs4 html parser
- (OrgNote.contain_page): use pygments code highlight

2016-03-12 Leslie Zhu <pythonisland@gmail.com>

- orgnote/parser.py (OrgNote.do_generate):

In emacs batch mode, use scripts/init-orgnote.el can generate highlight code in htm this will force generate all raw-html again in emacs batch mode, work as a backed feature.

generate options: all: re-generate all notes's raw-html file xxx.org: re-generate the note's raw-html file num: re-generate last num notes's raw-html file blank: ignore raw-html re-generate step

2016-03-10 Leslie Zhu <pythonisland@gmail.com>

- orgnote/parser.py (OrgNote.scan): update note filename in scan function

2016-03-09 Leslie Zhu <pythonisland@gmail.com>

- orgnote/parser.py: sort the links in _config.yml
- orgnote/config.py: add sidebar_contact configure item

2016-03-07 Leslie Zhu <pythonisland@gmail.com>

- orgnote/util.py: update the note file glob regex

2014-12-08 Leslie Zhu <pythonisland@gmail.com>

- 0.4.0:
- use YAML configure file, not use .ini file anymore
- all speciall config read from YAML configure file
- the public url format with yeam/month/date
- auto publish the file user input, not publish all in backend
- the default org file init wiht configure options

2014-11-24 Leslie Zhu <pythonisland@gmail.com>

- 0.3.0: new design
- add Config system, so user can configure OrgNote easy
- add setup.py, so user can install it as a python package

- add more command like *init*, 'list'..etc, so it more Hexo-like
- only support default theme
- only support emacs org-html.el convert, not use HTML parser in this version

2014-11-13 Leslie Zhu <pythonisland@gmail.com>

- 0.2.0: the basic functions ready
- orgnote.py: split homepage as small pages

2014-10-13 Leslie Zhu <pythonisland@gmail.com>

- 0.1.4: add feature show the notes by month in sidebar.
