# CHAPTER 1

---

## Overview

---

docs	
tests	
package	

Pipeable commandline utilities for simple bioinformatics research. Currently on version v0.1.9.

- Free software: MIT license

### 1.1 Installation

```
pip install biopipe
```

### 1.2 Documentation

<http://python-biopipe.readthedocs.io/en/latest>

### 1.3 Development

To run the all tests run:

tox
-----

Note, to combine the coverage data from all the tox environments run:

Windows	set PYTEST_ADDOPTS==cov-append tox
Other	PYTEST_ADDOPTS==cov-append tox

# CHAPTER 2

---

## Installation

---

At the command line:

```
pip install biopipe
```

# CHAPTER 3

---

## Usage

---

To use biopipe in a project:

```
import biopipe
```

# CHAPTER 4

---

Reference

---

## 4.1 biopipe

# CHAPTER 5

---

## Contributing

---

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given.

### 5.1 Bug reports

When reporting a bug please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

### 5.2 Documentation improvements

biopipe could always use more documentation, whether as part of the official biopipe docs, in docstrings, or even on the web in blog posts, articles, and such.

### 5.3 Feature requests and feedback

The best way to send feedback is to file an issue at <https://github.com/dohlee/python-biopipe/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that code contributions are welcome :)

## 5.4 Development

To set up *python-biopipe* for local development:

1. Fork [python-biopipe](#) (look for the “Fork” button).
2. Clone your fork locally:

```
git clone git@github.com:your_name_here/python-biopipe.git
```

3. Create a branch for local development:

```
git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

4. When you’re done making changes, run all the checks, doc builder and spell checker with [tox](#) one command:

```
tox
```

5. Commit your changes and push your branch to GitHub:

```
git add .  
git commit -m "Your detailed description of your changes."  
git push origin name-of-your-bugfix-or-feature
```

6. Submit a pull request through the GitHub website.

### 5.4.1 Pull Request Guidelines

If you need some code review or feedback while you’re developing the code just make the pull request.

For merging, you should:

1. Include passing tests (run [tox](#))<sup>1</sup>.
2. Update documentation when there’s new API, functionality etc.
3. Add a note to `CHANGELOG.rst` about the changes.
4. Add yourself to `AUTHORS.rst`.

### 5.4.2 Tips

To run a subset of tests:

```
tox -e envname -- py.test -k test_myfeature
```

To run all the test environments in *parallel* (you need to `pip install detox`):

```
detox
```

---

<sup>1</sup> If you don’t have all the necessary python versions available locally you can rely on Travis - it will [run the tests](#) for each change you add in the pull request.

It will be slower though ...

# CHAPTER 6

---

## Authors

---

- Dohoon Lee - <https://github.com/dohlee>

# CHAPTER 7

---

## Changelog

---

### 7.1 0.1.0 (2018-04-21)

- First release on PyPI.

# CHAPTER 8
