CHAPTER 1

tmdb package

Documentation of API methods. Most of these are a 1:1 mapping to the TMDB API.

To get started you need an *api_key* from TMDB, please see the TMDB website for such a key.

After you have obtained your *api_key* you can start querying the API from Python by doing the following simple steps:

```
import tmdb

api = tmdb.API(api_key)

results = api.search_movie(query="rocky")

# Do things with results here
```

Notes

- There are several methods currently in the API marked as a *get* request while they are actually *post* requests. These do not work currently.
- There is currently no caching in the library, it is suggested you do this yourself for now
- There is currently no throttling of requests, it is suggested you do this yourself for now

↳the past few years.\r\n\r\nI expected a little more _Batman_ than we_
↳got (especially with a runtime of 2:45) but while the story around the_
↳fall of Bruce Wayne and Gotham City was good I didn't find it amazing._
↳This might be in fact, one of my only criticisms\u2014it was a long_
↳movie but still, maybe too short for the story I felt was really being_
↳told. I feel confident in saying this big of a story could have been_
↳split into two movies.\r\n\r\nThe acting, editing, pacing, soundtrack_
↳and overall theme were the same 'as-close-to-perfect' as ever with any_
↳of Christopher Nolan's other films. Man does this guy know how to make_
↳a movie!\r\n\r\nYou don't have to be a Batman fan to enjoy these movies_
↳and I hope any of you who feel this way re-consider. These 3 movies are_
↳without a doubt in my mind, the finest display of comic mythology ever_
↳told on the big screen. They are damn near perfect.",
