“QTFeet”

---

“QTFeet, DBus introspection tool, DFeet clone writed with QT”

- Free software: BSD license
- Documentation: <http://qtfeet.rtfid.org>.

## 1.1 Features

### DONE

- Nothing

### TODO

- Plugin System (all this app are plugin)
- Show available buses in dbus connections
- Show available interfaces in bus
- Show available methods in interface
- Show available properties in interface
- Show available signals in interface
- Show communications events (dbus-monitor)
- Convert interfaces to code
- Call methods in interface
- Get properties in interface (shortcut to call GetProperties)

## 1.2 Some Answers

### Why clone D-Feet?

I like D-Feet, is useful to me. I Have nothing to do in my vacation and do something completely new is very hard, then I choose clone something to learn and tests some concepts.

### Why QT?

Why not? QT is now GPL, cross platform... This is my first QT attempt, then is something new to learn.

**How looks (or will look) architecture?**

To be honest I'm trying create something like Eclipse Framework that in the end can used to create applications for other uses.

- QT (for UI and some libs like DBus)
- iPOPO (python implementation of OSGi or something close to this)

---

## Installation

---

At the command line:

```
$ easy_install qtfeet
```

Or, if you have virtualenvwrapper installed:

```
$ mkvirtualenv qtfeet  
$ pip install qtfeet
```

---

## Usage

---

To use “QTFeeT” in a project:

```
import qtfeet
```

---

## Contributing

---

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given. You can contribute in many ways:

### 4.1 Types of Contributions

#### 4.1.1 Report Bugs

Report bugs at <https://github.com/hugosenari/qtfeet/issues>.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

#### 4.1.2 Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with “bug” is open to whoever wants to implement it.

#### 4.1.3 Implement Features

Look through the GitHub issues for features. Anything tagged with “feature” is open to whoever wants to implement it.

#### 4.1.4 Write Documentation

“QTFeet” could always use more documentation, whether as part of the official “QTFeet” docs, in docstrings, or even on the web in blog posts, articles, and such.

#### 4.1.5 Submit Feedback

The best way to send feedback is to file an issue at <https://github.com/hugosenari/qtfeet/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

## 4.2 Get Started!

Ready to contribute? Here's how to set up *qtfeet* for local development.

1. Fork the *qtfeet* repo on GitHub.
2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/qtfeet.git
```

3. Install your local copy into a virtualenv. Assuming you have *virtualenvwrapper* installed, this is how you set up your fork for local development:

```
$ mkvirtualenv qtfeet
$ cd qtfeet/
$ python setup.py develop
```

4. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

5. When you're done making changes, check that your changes pass *flake8* and the tests, including testing other Python versions with *tox*:

```
$ flake8 qtfeet tests
$ python setup.py test
$ tox
```

To get *flake8* and *tox*, just *pip* install them into your virtualenv.

6. Commit your changes and push your branch to GitHub:

```
$ git add .
$ git commit -m "Your detailed description of your changes."
$ git push origin name-of-your-bugfix-or-feature
```

7. Submit a pull request through the GitHub website.

## 4.3 Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.
2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in *README.rst*.
3. The pull request should work for Python 2.6, 2.7, and 3.3, and for PyPy. Check [https://travis-ci.org/hugosenari/qtfeet/pull\\_requests](https://travis-ci.org/hugosenari/qtfeet/pull_requests) and make sure that the tests pass for all supported Python versions.

## 4.4 Tips

To run a subset of tests:

```
$ python -m unittest tests.test_qtfeet
```

**Credits**

---

## 5.1 Development Lead

- hugosenari <hugosenari@gmail.com>

## 5.2 Contributors

Thomas Calmant author of QT-iPOPO (<http://ipopo.coderxpress.net/tutorials/qt.html>)

---

**History**

---

**6.1 0.1.0 (2013-08-11)**

- First release on PyPI.

---

## Indices and tables

---

- `genindex`
- `modindex`
- `search`
