

---

The word "Rafiki" is written in a large, black, hand-drawn style font. It is centered between two thick, horizontal, gold-colored bars. The top bar is positioned above the text, and the bottom bar is positioned below it.

# Rafiki

## Rafiki Documentation

*Release master*

# CHAPTER 1

---

## Getting Started

---

---

**Note:** Only the Arduino Due board is supported!

---

## Installation

1. Install Rust. Change the default toolchain to nightly. Copy default host triple and modify PATH variable from the printed Current installation options.

```
curl https://sh.rustup.rs -sSf | sh
```

2. Source the environment setup file.

```
source $HOME/.cargo/env
```

3. Install *bindgen* and download the Rust sources.

```
cargo install bindgen  
rustup component add rust-src
```

4. Recursively clone the Rafiki repository.

```
git clone --recursive https://github.com/erimoq/rafiki
```

5. Build and run the hello world example.

```
cd rafiki  
source setup.sh  
cd examples/hello_world  
make -s -j4 BOARD=arduino_due run
```

**Contents:**

## Hello World application

Let's start with the *Rafiki* “Hello World” application. It exemplifies what an application is and how to build and run it. It consists of two files; `main.rs` and `Makefile`.

### `main.rs`

`main.rs` defines the application entry function `main()`.

```
[macro_use] extern crate rafiki;

use rafiki::kernel::sys;

#[no_mangle]
pub fn main(_: isize, _: *const *const u8) -> isize
{
    sys::start();

    println!("Hello World!");

    0
}
```

### `Makefile`

`Makefile` contains build configuration of the application.

```
NAME = hello_world
BOARD ?= linux

RAFIKI_ROOT = ../../..
include $(RAFIKI_ROOT)/make/app.mk
```

## Build and run

Cross-compile, link and then run on an Arduino Due:

```
$ cd examples/hello_world
$ make -s BOARD=arduino_due run
<build system output>
Hello world!
$
```

## CHAPTER 3

---

### Boards

---

The boards supported by *Rafiki*.

#### **Arduino Due**

Below is a list of simple examples that are useful to understand the basics of *Rafiki*.

There are a lot more [examples](#) and [unit tests](#) on Github that shows how to use most of the *Rafiki* modules.

## Hello World

### About

This application prints “Hello World!” to standard output.

### Source code

```

*/

#[macro_use] extern crate rafiki;

use rafiki::kernel::sys;

#[no_mangle]
pub fn main(_: isize, _: *const *const u8) -> isize
{
    sys::start();

    println!("Hello World!");

    0
}
```

The source code can also be found on Github in the [examples/hello\\_world](#) folder.

## Build and run

Build and run the application on an Arduino Due.

```
$ cd examples/hello_world
$ make -s BOARD=arduino_due run
...
Hello world!
$
```
