Contents

1	Contents	3
1.1	Getting Started	3
1.2	Tutorial: Lity Rules Engine	3
1.3	Tutorial: A Modular DApp	3
1.4	Work with your own blockchain	3
1.5	Share and promote your DApp	3

BUIDL enables rapid prototyping and development of Ethereum compatible DApps. It is a visual IDE for Solidity / Lity + HTML5 + JavaScript + web3 + ElasticSearch development. It supports

- Solidity smart contracts
- Lity rules engine and other extensions
- A gas free, fast finality, and high performance blockchain for deployment
- A dedicated blockchain smart contract data search engine
- Integrated web3 and data service API
- Other ppl can access your DApp directly from the web without wallet or cryptocurrency

1.1 Getting Started

TBD

1.2 Tutorial: Lity Rules Engine

TBD

1.3 Tutorial: A Modular DApp

TBD

1.4 Work with your own blockchain

TBD

1.5 Share and promote your DApp

TBD
