---

## Reference Guide

---

### 1.1 Installation

- Add NeodorkSonataRedirectBundle to your projects: `composer.json`

```
//composer.json

"require": {
    // ...
    "neodork/sonata-redirect-bundle": "~0.1",
    // ...
}
```

- Add NeodorkSonataRedirectBundle to your application kernel:

```
// app/AppKernel.php

public function registerBundles()
{
    return array(
        // ...
        new Sonata\AdminBundle\SonataAdminBundle(),
        new Sonata\DoctrineORMAdminBundle\SonataDoctrineORMAdminBundle(),
        new Sonata\EasyExtendsBundle\SonataEasyExtendsBundle(),
        new Symfony\Cmf\Bundle\RoutingBundle\CmfRoutingBundle(),
        new Neodork\SonataRedirectBundle\NeodorkSonataRedirectBundle(),
        // ...
    );
}
```

- Create a configuration file called: `neodork_redirect.yml`:

```
neodork_sonata_redirect:
    class:
        redirect: Application\Neodork\SonataRedirectBundle\Entity\Redirect
    admin:
        redirect:
            class: Neodork\SonataRedirectBundle\Admin\RedirectAdmin
            controller: SonataAdminBundle:CRUD
            translation: NeodorkRedirectBundle

doctrine:
```

```
orm:
    entity_managers:
        default:
            // only needed if auto_mapping: false
            mappings:
                #ApplicationNeodorkSonataRedirectBundle: ~
                NeodorkSonataRedirectBundle: ~
```

- Import the `neodork_redirect.yml` file and enable json type for doctrine:

```
imports:
    #...
    - { resource: neodork_redirect.yml }
    #...

doctrine:
    dbal:
        # ...
        types:
            json: Sonata\Doctrine\Types\JsonType
```

- Run the sonata easy-extends command:

```
php app/console sonata:easy-extends:generate NeodorkSonataRedirectBundle -d src
```

- Enable the new application bundle:

```
// app/AppKernel.php

public function registerBundles()
{
    return array(
        // ...
        new Application\Neodork\SonataRedirectBundle\ApplicationNeodorkSonataRedirectBundle(),
    );
}
```
