----------	---------------------------	----------

A Smart Spotify Player that makes playing songs on Spotify easier than ever.

This application understands the voice commands using Microsoft Speech API and the brain of Microsoft LUIS to paraphrase the voice commands as per the Artist, Song, Playlist and Album. After understanding which song to play, it goes ahead and uses the Spotify Web API to search for the url of that specific song and loads it up on the web browser.

Say commands like :

Note: “Play the song everglow by Coldplay from the album a head full of dreams”

“Play songs by the artist Nickelback”

“Play songs from the album Pound Syndrome”

or simply say

Note: “Play Hotel California”

Get things rolling with :

```
pip install git+git://github.com/kishorevasan/SpotifyPlayer.git
```

Just one python package required..

```
pip install SpeechRecognition
```

Now, you can simply write the command given below on your terminal and start playing songs.

```
python speech.pyc
```

Happy Listening!

CHAPTER 1

Indices and tables

- `genindex`
- `modindex`
