
TRACKIT Documentation

Release 0.2 build 3

TRACKIT

May 25, 2017

Contents:

1	Intro	1
1.1	About	1
2	Indices and tables	3

New in version 0.1.

Changed in version 1.2.

About

TRACKIT is an Asset Management tool, designed to be delivered via the Cloud as a Software as a Service (SaaS) application. It can be deployed locally and installed on a local virtual or physical machine within a Customer environment.

Placement Type

To ensure Assets are placed correctly, the Product Model must belong to an appropriate system asset_class.

It is possible for a Product to belong to more than one Asset Class, therefore ensure that the correct class is chosen to determine the placement type, and add any additional classes for reporting/grouping as required.

CHAPTER 2

Indices and tables

- `genindex`
- `modindex`
- `search`
