
annotate Documentation

Release 0.0.1

Paul Brian, Ishan Mandhan

March 01, 2013

CONTENTS

Annotate is an experiment in distributed database design and an experiment in modern javascript techniques and a social experiment

Essentially - what if we could annotate a web page store the notes on any OAuth enabled system, and simply see what other people within our social circles had written on the page/

We guess someone else is already doing something like this, but that's never stopped anyone from learning !
