5.1	Settings	11
6	API reference	13
6.1	Template tags	13
6.2	Models	13
7	Indices and tables	15

A setup for handling generic model attachments

CHAPTER 1

About Bambu Attachments

This package contains a simple set of models and admin helper classes that allow you to add media attachments to any model.

CHAPTER 2

About Bambu Tools 2.0

This is part of a toolset called Bambu Tools. It's being moved from a namespace of `bambu` to its own 'root-level' package, along with all the other tools in the set. If you're upgrading from a version prior to 2.0, please make sure to update your code to use `bambu_attachments` rather than `bambu.attachments`.

Installation

Install the package via Pip:

```
pip install bambu-api
```

Add it to your `INSTALLED_APPS` list:

```
INSTALLED_APPS = (  
    ...  
    'bambu_attachments'  
)
```

Run `manage.py syncdb` or `manage.py migrate` to setup the database tables.

CHAPTER 4

Questions or suggestions?

Find me on Twitter ([@iamsteadman](#)) or visit my [blog](#).

Settings

ATTACHMENTS_MIMETYPES The type of approved MIME types that can be uploaded

ATTACHMENT_WIDTH The default width to embed images and video
