An extensible XML-RPC provider

CHAPTER 1

About Bambu XML-RPC

This package exposes Python's own XML-RPC functionality to Django views, and allows any function to work as an XML-RPC endpoint.

CHAPTER 2

About Bambu Tools 2.0

This is part of a toolset called Bambu Tools. It's being moved from a namespace of `bambu` to its own 'root-level' package, along with all the other tools in the set. If you're upgrading from a version prior to 2.0, please make sure to update your code to use `bambu_xmlrpc` rather than `bambu.xmlrpc`.

Installation

Install the package via Pip:

```
pip install bambu-xmlrpc
```

Add it to your `INSTALLED_APPS` list:

```
INSTALLED_APPS = (  
    ...  
    'bambu_xmlrpc'  
)
```

Add `bambu_xmlrpc.urls` to your `URLconf`:

```
urlpatterns = patterns('',  
    ...  
    url(r'^xml-rpc/', include('bambu_xmlrpc.urls')),  
)
```

Your endpoint will be available at `/xml-rpc/`.

CHAPTER 4

Basic usage

Apply the `bambu_xmlrpc.handler` decorator to a function to expose it as an API. You can then GET from and POST to the function via the `/xml-rpc/` endpoint.

`bambu_xmlrpc.handler` (*namespace*='')

A decorator that turns a normal Python function into a Django-aware view that conforms to the XML-RPC spec

Parameters `namespace` – The fully-qualified namespace for the function

CHAPTER 5

Questions or suggestions?
