Something about Bitconch

Warning: Some warnings here.

Language Documentation

Something here.

Warning: As humans write software, it can have bugs. You should follow established software development best-practices when writing your smart contracts, this includes code review, testing, audits, and correctness proofs. Smart contract users are sometimes more confident with code than their authors, and blockchains and smart contracts have their own unique issues to watch out for, so before working on production code, make sure you read the `security_considerations` section.

If you have any questions, you can try searching for answers or asking on the [Ethereum Stackexchange](#), or our [gitter channel](#).

Ideas for improving Solidity or this documentation are always welcome, read our [contributors guide](#) for more details.

CHAPTER 2

Translations

Community volunteers help translate this documentation into several languages. They have varying degrees of completeness and up-to-dateness. The English version stands as a reference.
