A [Python](#) package implementing various HDRI / Radiance image processing algorithms.

It is open source and freely available under the [New BSD License](#) terms.

Table of Contents

- 1 *Colour - HDRI*
 - 1.1 *Features*
 - 1.2 *Installation*
 - * 1.2.1 *Primary Dependencies*
 - * 1.2.2 *Optional Features Dependencies*
 - * 1.2.3 *Pypi*
 - 1.3 *Usage*
 - * 1.3.1 *API*
 - * 1.3.2 *Examples*
 - 1.4 *Contributing*
 - 1.5 *Bibliography*
 - 1.6 *Code of Conduct*
 - 1.7 *About*

1.1 FEATURES

The following features are available:

- HDRI / Radiance Image Generation
- Debevec (1997) Camera Response Function Computation
- Grossberg (2003) Histogram Based Image Sampling
- Variance Minimization Light Probe Sampling
- Global Tonemapping Operators
- Adobe DNG SDK Colour Processing
- Absolute Luminance Calibration
- Digital Still Camera (DSC) Exposure Model
- Raw Processing Helpers

1.2 INSTALLATION

Because of their size, the resources dependencies needed to run the various examples and unit tests are not provided within the Pypi package. They are separately available as [Git Submodules](#) when cloning the [repository](#).

2.1 1.2.1 Primary Dependencies

Colour - HDRI requires various dependencies in order to run:

- Python 2.7 or Python 3.7
- Colour Science

2.2 1.2.2 Optional Features Dependencies

- colour-demosaiicing
- Adobe DNG Converter
- dcraw
- ExifTool
- rawpy

2.3 1.2.3 Pypi

Once the dependencies satisfied, **Colour - HDRI** can be installed from the [Python Package Index](#) by issuing this command in a shell:

```
pip install colour-hdri
```

The optional features dependencies are installed as follows:

```
pip install 'colour-hdri[optional]'
```

The figures plotting dependencies are installed as follows:

```
pip install 'colour-hdri[plotting]'
```

The tests suite dependencies are installed as follows:

```
pip install 'colour-hdri[tests]'
```

The documentation building dependencies are installed as follows:

```
pip install 'colour-hdri[docs]'
```

The overall development dependencies are installed as follows:

```
pip install 'colour-hdri[development]'
```

1.3 USAGE

3.1 1.3.1 API

The main reference for Colour - HDRI is the manual:

3.1.1 Colour - HDRI Manual

3.1.1.1 Reference

Colour - HDRI

Camera Calibration

- *Absolute Luminance - Lagarde (2016)*
- *Debevec (1997)*

Absolute Luminance - Lagarde (2016)

colour_hdri

`absolute_luminance_calibration_Lagarde2016(...)` Performs absolute *Luminance* calibration of given *RGB* panoramic image using *Lagarde (2016)* method.

`upper_hemisphere_illumination_weights_Lagarde2016(...)` Computes upper hemisphere illumination weights for use with applications unable to perform the computation directly, i.e.

```

colour_hdri.upper_hemisphere_illuminance_weights_Lagarde2016

colour_hdri.upper_hemisphere_illuminance_weights_Lagarde2016(*height*, *width*)

Computes upper hemisphere illuminance weights for use with applications unable to perform the computation directly, i.e. *Adobe Photoshop*.

Parameters

- **height** (*int*) – Output array height.
- **width** (*int*) – Output array width.

Returns Upper hemisphere illuminance weights.

Return type ndarray

Debevec (1997)

colour_hdri

| | |
|--|---|
| <code>g_solve(Z, B[, l_s, w, n])</code> | Given a set of pixel values observed for several pixels in several images with different exposure times, this function returns the imaging system's response function g as well as the log film irradiance values lE for the observed pixels. |
| <code>camera_response_functions_Debevec1997(...[, ...])</code> | Returns the camera response functions for given image stack using <i>Debevec (1997)</i> method. |

colour_hdri.g_solve

`colour_hdri.g_solve(Z, B, l_s=30, w=<function weighting_function_Debevec1997>, n=256)`

Given a set of pixel values observed for several pixels in several images with different exposure times, this function returns the imaging system's response function g as well as the log film irradiance values lE for the observed pixels.

Parameters

- **Z** (array_like) – Set of pixel values observed for several pixels in several images.
- **B** (array_like) – Log Δt , or log shutter speed for images.
- **l_s** (numeric, optional) – λ smoothing term.
- **w** (callable, optional) – Weighting function w .
- **n** (int, optional) – n constant.

Returns Camera response functions $g(z)$ and log film irradiance values lE .

Return type tuple

References

[DM97]

colour_hdri.camera_response_functions_Debevec1997

`colour_hdri.camera_response_functions_Debevec1997(image_stack, s=<function samples_Grossberg2003>, samples=1000, l_s=30, w=<function weighting_function_Debevec1997>, n=256, normalise=True)`

Returns the camera response functions for given image stack using *Debevec (1997)* method.

Image channels are sampled with s sampling function and the output samples are passed to `colour_hdri.g_solve()`.

Parameters

- **image_stack** (`colour_hdri.ImageStack`) – Stack of single channel or multi-channel floating point images.
- **s** (callable, optional) – Sampling function s .
- **samples** (int, optional) – Samples count per images.
- **l_s** (numeric, optional) – λ smoothing term.

- **w** (callable, optional) – Weighting function w .
- **n** (int, optional) – n constant.
- **normalise** (bool, optional) – Enables the camera response functions normalisation. Uncertain camera response functions values resulting from w function are set to zero.

Returns Camera response functions $g(z)$.

Return type ndarray

[DM97]

Exposure Computation

- *Common*
- *Digital Still Camera Exposure*

Common

colour_hdri

| | |
|--|---|
| average_luminance(N, t, S[, k]) | Computes the average luminance L in $cd \cdot m^{-2}$ from given relative aperture <i>F-Number</i> N , <i>Exposure Time</i> t , <i>ISO</i> arithmetic speed S and <i>reflected light calibration constant</i> k . |
| average_illuminance(N, t, S[, c]) | Computes the average illuminance E in Lux from given relative aperture <i>F-Number</i> N , <i>Exposure Time</i> t , <i>ISO</i> arithmetic speed S and <i>incident light calibration constant</i> c . |
| luminance_to_exposure_value(L, S[, k]) | Computes the exposure value EV from given scene luminance L in $cd \cdot m^{-2}$, <i>ISO</i> arithmetic speed S and <i>reflected light calibration constant</i> k . |
| illuminance_to_exposure_value(E, S[, c]) | Computes the exposure value EV from given scene illuminance E in Lux , <i>ISO</i> arithmetic speed S and <i>incident light calibration constant</i> c . |
| adjust_exposure(a, EV) | Adjusts given array exposure using given EV exposure value. |

colour_hdri.average_luminance

colour_hdri.average_luminance($N, t, S, k=12.5$)

Computes the average luminance L in $cd \cdot m^{-2}$ from given relative aperture *F-Number* N , *Exposure Time* t , *ISO* arithmetic speed S and *reflected light calibration constant* k .

Parameters

- **N** (array_like) – Relative aperture *F-Number* N .
- **t** (array_like) – *Exposure Time* t .
- **S** (array_like) – *ISO* arithmetic speed S .

- **k** (numeric, optional) – *Reflected light calibration constant k*. ISO 2720:1974 recommends a range for *k* of 10.6 to 13.4 with luminance in $cd \cdot m^{-2}$. Two values for *k* are in common use: 12.5 (Canon, Nikon, and Sekonic) and 14 (Minolta, Kenko, and Pentax).

Returns Average luminance L in $cd \cdot m^{-2}$.

Return type ndarray

References

[Wika]

Examples

```
>>> average_luminance(8, 1, 100)
8.0
```

colour_hdri.average_illuminance

colour_hdri.**average_illuminance**(*N*, *t*, *S*, *c*=250)

Computes the average illuminance E in *Lux* from given relative aperture *F-Number N*, *Exposure Time t*, *ISO arithmetic speed S* and *incident light calibration constant c*.

Parameters

- **N** (array_like) – Relative aperture *F-Number N*.
- **t** (array_like) – *Exposure Time t*.
- **S** (array_like) – *ISO arithmetic speed S*.
- **c** (numeric, optional) – *Incident light calibration constant c*. With a flat receptor, ISO 2720:1974 recommends a range for *c* of 240 to 400 with illuminance in *Lux*; a value of 250 is commonly used. With a hemispherical receptor, ISO 2720:1974 recommends a range for *c* of 320 to 540 with illuminance in *Lux*; in practice, values typically are between 320 (Minolta) and 340 (Sekonic).

Returns Average illuminance E in *Lux*.

Return type ndarray

References

[Wika]

Examples

```
>>> average_illuminance(8, 1, 100)
160.0
```

colour_hdri.luminance_to_exposure_value

colour_hdri.luminance_to_exposure_value(L , S , $k=12.5$)

Computes the exposure value EV from given scene luminance L in $cd \cdot m^{-2}$, ISO arithmetic speed S and reflected light calibration constant k .

Parameters

- **L** (array_like) – Scene luminance L in $cd \cdot m^{-2}$.
- **S** (array_like) – ISO arithmetic speed S .
- **k** (numeric, optional) – Reflected light calibration constant k . ISO 2720:1974 recommends a range for k of 10.6 to 13.4 with luminance in $cd \cdot m^{-2}$. Two values for k are in common use: 12.5 (Canon, Nikon, and Sekonic) and 14 (Minolta, Kenko, and Pentax).

Returns Exposure value EV .

Return type ndarray

Notes

- The exposure value EV indicates a combination of camera settings rather than the focal plane exposure, i.e. luminous exposure, photometric exposure, H . The focal plane exposure is time-integrated illuminance.

Examples

```
>>> luminance_to_exposure_value(0.125, 100)
0.0
```

colour_hdri.illuminance_to_exposure_value

colour_hdri.illuminance_to_exposure_value(E , S , $c=250$)

Computes the exposure value EV from given scene illuminance E in Lux , ISO arithmetic speed S and incident light calibration constant c .

Parameters

- **E** (array_like) – Scene illuminance E in Lux .
- **S** (array_like) – ISO arithmetic speed S .
- **c** (numeric, optional) – Incident light calibration constant c . With a flat receptor, ISO 2720:1974 recommends a range for c of 240 to 400 with illuminance in Lux ; a value of 250 is commonly used. With a hemispherical receptor, ISO 2720:1974 recommends a range for c of 320 to 540 with illuminance in Lux ; in practice, values typically are between 320 (Minolta) and 340 (Sekonic).

Returns Exposure value EV .

Return type ndarray

Notes

- The exposure value EV indicates a combination of camera settings rather than the focal plane exposure, i.e. luminous exposure, photometric exposure, H . The focal plane exposure is time-integrated illuminance.

Examples

```
>>> illuminance_to_exposure_value(2.5, 100)
0.0
```

colour_hdri.adjust_exposure

colour_hdri.adjust_exposure(a , EV)

Adjusts given array exposure using given EV exposure value.

Parameters

- a (array_like) – Array to adjust the exposure.
- EV (numeric) – Exposure adjustment value.

Returns Exposure adjusted array.

Return type ndarray

Examples

```
>>> adjust_exposure(np.array([0.25, 0.5, 0.75, 1]), 1)
array([ 0.5,  1. ,  1.5,  2. ])
```

Digital Still Camera Exposure

colour_hdri

| | |
|--|---|
| focal_plane_exposure(L , A , t , F , i , H_f [...]) | Computes the focal plane exposure H in lux-seconds ($lx.s$). |
| arithmetic_mean_focal_plane_exposure(L_a , A , t) | Computes the arithmetic mean focal plane exposure H_a for a camera focused on infinity, $H_f \ll H$, $T = 9/10$, $\theta = 10^\circ$ and $f_v = 98/100$. |
| saturation_based_speed_focal_plane_exposure(L , ...) | Computes the Saturation-Based Speed (SBS) focal plane exposure H in lux-seconds ($lx.s$). |
| exposure_index_values(H_a) | Computes the exposure index values I_{EI} from given focal plane exposure H_a . |
| exposure_value_100(N , t , S) | Computes the exposure value EV_{100} from given relative aperture F -Number N , Exposure Time t and ISO arithmetic speed S . |
| photometric_exposure_scale_factor_Lagarde2014(EV_{100}) | Computes the exposure value EV_{100} to photometric exposure scale factor using Lagarde and de Rousiers (2014) formulation derived from the ISO 12232:2006 Saturation Based Sensitivity (SBS) recommendation. |

colour_hdri.focal_plane_exposure

`colour_hdri.focal_plane_exposure(L, A, t, F, i, H_f, T=0.9, f_v=0.98, theta=10)`
 Computes the focal plane exposure H in lux-seconds (*lx.s*).

Parameters

- **L** (array_like) – Scene luminance L , expressed in cd/m^2 .
- **A** (array_like) – Lens *F-Number* A .
- **t** (array_like) – *Exposure Time* t , expressed in seconds.
- **F** (array_like) – Lens focal length F , expressed in meters.
- **i** (array_like) – Image distance i , expressed in meters.
- **H_f** (array_like) – Focal plane flare exposure H_f , expressed in lux-seconds (*lx.s*).
- **T** (array_like, optional) – Transmission factor of the lens T .
- **f_v** (array_like, optional) – Vignetting factor f_v .
- **theta** (array_like, optional) – Angle of image point off axis θ .

Returns Focal plane exposure H in lux-seconds (*lx.s*).

Return type ndarray

Notes

- Focal plane exposure is also named luminous exposure or photometric exposure and is time-integrated illuminance.
- Object distance o , focal length F , and image distance i are related by the thin-lens equation:

$$\frac{1}{f} = \frac{1}{o} + \frac{1}{i}$$
- This method ignores the *ISO* arithmetic speed S and is not concerned with determining an appropriate minimum or maximum exposure level.

References

[ISO06]

Examples

```
>>> focal_plane_exposure(4000, 8, 1 / 250, 50 / 1000, 50 / 1000, 0.0015)
...
0.1643937...
```

colour_hdri.arithmetic_mean_focal_plane_exposure

`colour_hdri.arithmetic_mean_focal_plane_exposure(L_a, A, t)`

Computes the arithmetic mean focal plane exposure H_a for a camera focused on infinity, $H_f \ll H$, $T = 9/10$, $\theta = 10^\circ$ and $f_v = 98/100$.

Parameters

- **L_a** (array_like) – Arithmetic scene luminance L_a , expressed in cd/m^2 .
- **A** (array_like) – Lens *F-Number* A .
- **t** (array_like) – *Exposure Time* t , expressed in seconds.

Returns Focal plane exposure H_a .

Return type ndarray

Notes

- Focal plane exposure is also named luminous exposure or photometric exposure and is time-integrated illuminance.
- Object distance o , focal length F , and image distance i are related by the thin-lens equation:

$$\frac{1}{f} = \frac{1}{o} + \frac{1}{i}$$
- This method ignores the *ISO* arithmetic speed S and is not concerned with determining an appropriate minimum or maximum exposure level.

References

[ISO06]

Examples

```
>>> arithmetic_mean_focal_plane_exposure(4000, 8, 1 / 250)
...
0.1628937...
```

colour_hdri.saturation_based_speed_focal_plane_exposure

`colour_hdri.saturation_based_speed_focal_plane_exposure(L, A, t, S, F=0.05, i=0.0505050505050504, H_f=0, T=0.9, f_v=0.98, theta=10)`

Computes the Saturation-Based Speed (SBS) focal plane exposure H in lux-seconds ($lx.s$).

The model implemented by this definition is appropriate to simulate a physical camera in an offline or realtime renderer.

Parameters

- **L** (array_like) – Scene luminance L , expressed in cd/m^2 .
- **A** (array_like) – Lens *F-Number* A .
- **t** (array_like) – *Exposure Time* t , expressed in seconds.
- **S** (array_like) – *ISO* arithmetic speed S .
- **F** (array_like) – Lens focal length F , expressed in meters.

- **i** (array_like) – Image distance i , expressed in meters.
- **H_f** (array_like) – Focal plane flare exposure H_f , expressed in lux-seconds ($lx.s$).
- **T** (array_like, optional) – Transmission factor of the lens T .
- **f_v** (array_like, optional) – Vignetting factor f_v .
- **theta** (array_like, optional) – Angle of image point off axis θ .

Returns Focal plane exposure H in lux-seconds ($lx.s$).

Return type ndarray

Notes

- Focal plane exposure is also named luminous exposure or photometric exposure and is time-integrated illuminance.
- Object distance o , focal length F , and image distance i are related by the thin-lens equation:

$$\frac{1}{f} = \frac{1}{o} + \frac{1}{i}$$
- The current image distance default value is that an object located at 5m and imaged with a 50mm lens.
- The saturation based speed, S_{sat} , of an electronic still picture camera is defined as: $S_{sat} = \frac{78}{H_{sat}}$ where H_{sat} is the minimum focal plane exposure, expressed in lux-seconds ($lx.s$), that produces the maximum valid (not clipped or bloomed) camera output signal. This provides 1/2 “stop” of headroom (41% additional headroom) for specular highlights above the signal level that would be obtained from a theoretical 100% reflectance object in the scene, so that a theoretical 141% reflectance object in the scene would produce a focal plane exposure of H_{sat} .
- The focal plane exposure H computed by this definition is almost equal to that given by scene luminance L scaled with the output of `colour_hdri.photometric_exposure_scale_factor_Lagarde2014()` definition.

References

[ISO06]

Examples

```
>>> saturation_based_speed_focal_plane_exposure(
...     4000, 8, 1 / 250, 400, 50 / 1000, 50 / 1000, 0.0015)
0.8430446...
```

colour_hdri.exposure_index_values

colour_hdri.exposure_index_values(H_a)

Computes the exposure index values I_{EI} from given focal plane exposure H_a .

Parameters H_a (array_like) – Focal plane exposure H_a .

Returns Exposure index values I_{EI} .

Return type ndarray

References

[ISO06]

Examples

```
>>> exposure_index_values(0.1628937086212269)
61.3897251...
```

colour_hdri.exposure_value_100

colour_hdri.exposure_value_100(N, t, S)

Computes the exposure value EV_{100} from given relative aperture *F-Number* N , *Exposure Time* t and *ISO arithmetic speed* S .

Parameters

- N (array_like) – Relative aperture *F-Number* N .
- t (array_like) – *Exposure Time* t .
- S (array_like) – *ISO arithmetic speed* S .

Returns Exposure value EV_{100} .

Return type ndarray

References

[ISO06], [LdR14]

Notes

- The underlying implementation uses the `colour_hdri.luminance_to_exposure_value()` and `colour_hdri.average_luminance()` definitions with same fixed value for the *reflected light calibration constant* k which cancels its scaling effect and produces a value equal to $\log_2\left(\frac{N^2}{t}\right) - \log_2\left(\frac{S}{100}\right)$ as given in [LdR14].

Examples

```
>>> exposure_value_100(8, 1 / 250, 400)
11.9657842...
```

colour_hdri.photometric_exposure_scale_factor_Lagarde2014

```
colour_hdri.photometric_exposure_scale_factor_Lagarde2014(EV100, T=0.9, f_v=0.98,
theta=10)
```

Converts the exposure value $EV100$ to photometric exposure scale factor using *Lagarde and de Rousiers (2014)* formulation derived from the *ISO 12232:2006 Saturation Based Sensitivity (SBS)* recommendation.

The model implemented by this definition is appropriate to simulate a physical camera in an offline or realtime renderer.

Parameters

- **T** (array_like, optional) – Exposure value $EV100$.
- **T** – Transmission factor of the lens T .
- **f_v** (array_like, optional) – Vignetting factor f_v .
- **theta** (array_like, optional) – Angle of image point off axis θ .

Returns Photometric exposure in lux-seconds ($lx.s$).

Return type ndarray

Notes

- The saturation based speed, S_{sat} , of an electronic still picture camera is defined as: $S_{sat} = \frac{78}{H_{sat}}$ where H_{sat} is the minimum focal plane exposure, expressed in lux-seconds ($lx.s$), that produces the maximum valid (not clipped or bloomed) camera output signal. This provides 1/2 “stop” of headroom (41% additional headroom) for specular highlights above the signal level that would be obtained from a theoretical 100% reflectance object in the scene, so that a theoretical 141% reflectance object in the scene would produce a focal plane exposure of H_{sat} .
- Scene luminance L scaled with the photometric exposure value computed by this definition is almost equal to that given by the `colour_hdri.saturation_based_speed_focal_plane_exposure()` definition.

References

[ISO06], [LdR14]

Examples

```
>>> EV100 = exposure_value_100(8, 1 / 250, 400)
>>> H = photometric_exposure_scale_factor_Lagarde2014(EV100)
>>> print(H)
0.0002088...
>>> H * 4000
0.8353523...
```

HDRI / Radiance Image Generation

- *Generation*
- *Weighting Functions*

Generation

colour_hdri

| | |
|--|---|
| <code>image_stack_to_radiance_image(image_stack[, ...])</code> | Generates a HDRI / radiance image from given image stack. |
|--|---|

colour_hdri.image_stack_to_radiance_image

```
colour_hdri.image_stack_to_radiance_image(image_stack, weighting_function=<function
weighting_function_Debevec1997>,
weighting_average=False, camera_response_functions=None)
```

Generates a HDRI / radiance image from given image stack.

Parameters

- **image_stack** (`colour_hdri.ImageStack`) – Stack of single channel or multi-channel floating point images. The stack is assumed to be representing linear values except if `camera_response_functions` argument is provided.
- **weighting_function** (callable, optional) – Weighting function w .
- **weighting_average** (`bool`, optional) – Enables weighting function w computation on channels average instead of on a per channel basis.
- **camera_response_functions** (array_like, optional) – Camera response functions $g(z)$ of the imaging system / camera if the stack is representing non linear values.

Returns Radiance image.

Return type ndarray

Warning: If the image stack contains images with negative or equal to zero values, unpredictable results may occur and NaNs might be generated. It is thus recommended to encode the images in a wider RGB colourspace or clamp negative values.

References

[BADC11a]

Weighting Functions

colour_hdri

| | |
|---|---|
| <code>normal_distribution_function(a[, mu, sigma])</code> | Returns given array weighted by a normal distribution function. |
| <code>hat_function(a)</code> | Returns given array weighted by a hat function. |
| <code>weighting_function_Debevec1997(a[, ...])</code> | Returns given array weighted by <i>Debevec (1997)</i> function. |

colour_hdri.normal_distribution_function

`colour_hdri.normal_distribution_function(a, mu=0.5, sigma=0.15)`

Returns given array weighted by a normal distribution function.

Parameters

- **a** (array_like) – Array to apply the weighting function onto.
- **mu** (numeric, optional) – Mean or expectation.
- **sigma** (numeric, optional) – Standard deviation.

Returns Weighted array.

Return type ndarray

Examples

```
>>> normal_distribution_function(np.linspace(0, 1, 10))
array([ 0.00386592,  0.03470859,  0.18002174,  0.53940751,  0.93371212,
        0.93371212,  0.53940751,  0.18002174,  0.03470859,  0.00386592])
```

colour_hdri.hat_function

`colour_hdri.hat_function(a)`

Returns given array weighted by a hat function.

Parameters **a** (array_like) – Array to apply the weighting function onto.

Returns Weighted array.

Return type ndarray

Examples

```
>>> hat_function(np.linspace(0, 1, 10))
array([ 0.          ,  0.95099207,  0.99913557,  0.99999812,  1.          ,
        1.          ,  0.99999812,  0.99913557,  0.95099207,  0.          ])
```

colour_hdri.weighting_function_Debevec1997

colour_hdri.**weighting_function_Debevec1997**(a, domain_l=0.01, domain_h=0.99)

Returns given array weighted by *Debevec (1997)* function.

Parameters

- **a** (array_like) – Array to apply the weighting function onto.
- **domain_l** (numeric, optional) – Domain lowest possible value, values less than domain_l will be set to zero.
- **domain_h** (numeric, optional) – Domain highest possible value, values greater than domain_h will be set to zero.

Returns Weighted array.

Return type ndarray

References

[DM97]

Examples

```
>>> weighting_function_Debevec1997(np.linspace(0, 1, 10))
array([ 0.          ,  0.23273657,  0.48849105,  0.74424552,  1.          ,
        1.          ,  0.74424552,  0.48849105,  0.23273657,  0.          ])
```

colour_hdri

| | |
|--|--|
| <code>xy_to_camera_neutral(xy, ...)</code> | Converts given <i>xy</i> white balance chromaticity coordinates to <i>Camera Neutral</i> coordinates. |
| <code>camera_neutral_to_xy(camera_neutral, ... [, ...])</code> | Converts given <i>Camera Neutral</i> coordinates to <i>xy</i> white balance chromaticity coordinates. |
| <code>XYZ_to_camera_space_matrix(xy, ...)</code> | Returns the <i>CIE XYZ</i> to <i>Camera Space</i> matrix for given <i>xy</i> white balance chromaticity coordinates. |
| <code>camera_space_to_XYZ_matrix(xy, ... [, ...])</code> | Returns the <i>Camera Space</i> to <i>CIE XYZ</i> matrix for given <i>xy</i> white balance chromaticity coordinates. |

colour_hdri.xy_to_camera_neutral

`colour_hdri.xy_to_camera_neutral(xy, CCT_calibration_illuminant_1, CCT_calibration_illuminant_2, M_color_matrix_1, M_color_matrix_2, M_camera_calibration_1, M_camera_calibration_2, analog_balance)`

Converts given *xy* white balance chromaticity coordinates to *Camera Neutral* coordinates.

Parameters

- **xy** (array_like) – *xy* white balance chromaticity coordinates.
- **CCT_calibration_illuminant_1** (numeric) – Correlated colour temperature of *CalibrationIlluminant1*.
- **CCT_calibration_illuminant_2** (numeric) – Correlated colour temperature of *CalibrationIlluminant2*.
- **M_color_matrix_1** (array_like) – *ColorMatrix1* tag matrix.
- **M_color_matrix_2** (array_like) – *ColorMatrix2* tag matrix.
- **M_camera_calibration_1** (array_like) – *CameraCalibration1* tag matrix.
- **M_camera_calibration_2** (array_like) – *CameraCalibration2* tag matrix.
- **analog_balance** (array_like) – *AnalogBalance* tag vector.

Returns *Camera Neutral* coordinates.

Return type ndarray

Examples

```
>>> M_color_matrix_1 = np.array(
...     [[0.5309, -0.0229, -0.0336],
...      [-0.6241, 1.3265, 0.3337],
...      [-0.0817, 0.1215, 0.6664]])
>>> M_color_matrix_2 = np.array(
...     [[0.4716, 0.0603, -0.0830],
...      [-0.7798, 1.5474, 0.2480],
...      [-0.1496, 0.1937, 0.6651]])
>>> M_camera_calibration_1 = np.identity(3)
>>> M_camera_calibration_2 = np.identity(3)
>>> analog_balance = np.ones(3)
>>> xy_to_camera_neutral(
...     np.array([0.32816244, 0.34698169]),
...     2850,
...     6500,
...     M_color_matrix_1,
...     M_color_matrix_2,
...     M_camera_calibration_1,
...     M_camera_calibration_2,
...     analog_balance)
array([ 0.4130699..., 1..., 0.646465...])
```

`colour_hdri.camera_neutral_to_xy`

```
colour_hdri.camera_neutral_to_xy(camera_neutral, CCT_calibration_illuminant_1,
                                CCT_calibration_illuminant_2, M_color_matrix_1,
                                M_color_matrix_2, M_camera_calibration_1,
                                M_camera_calibration_2, analog_balance,
                                epsilon=2.2204460492503131e-16)
```

Converts given *Camera Neutral* coordinates to *xy* white balance chromaticity coordinates.

Parameters

- **camera_neutral** (array_like) – *Camera Neutral* coordinates.
- **CCT_calibration_illuminant_1** (numeric) – Correlated colour temperature of *CalibrationIlluminant1*.
- **CCT_calibration_illuminant_2** (numeric) – Correlated colour temperature of *CalibrationIlluminant2*.
- **M_color_matrix_1** (array_like) – *ColorMatrix1* tag matrix.
- **M_color_matrix_2** (array_like) – *ColorMatrix2* tag matrix.
- **M_camera_calibration_1** (array_like) – *CameraCalibration1* tag matrix.
- **M_camera_calibration_2** (array_like) – *CameraCalibration2* tag matrix.
- **analog_balance** (array_like) – *AnalogBalance* tag vector.
- **epsilon** (numeric, optional) – Threshold value for computation convergence.

Returns *xy* white balance chromaticity coordinates.

Return type ndarray

Raises `RuntimeError` – If the given *Camera Neutral* coordinates did not converge to *xy* white balance chromaticity coordinates.

colour_hdri.XYZ_to_camera_space_matrix

```
colour_hdri.XYZ_to_camera_space_matrix(xy,
                                       CCT_calibration_illuminant_1,
                                       CCT_calibration_illuminant_2, M_color_matrix_1,
                                       M_color_matrix_2,             M_camera_calibration_1,
                                       M_camera_calibration_2, analog_balance)
```

Returns the CIE XYZ to Camera Space matrix for given *xy* white balance chromaticity coordinates.

Parameters

- **xy** (array_like) – *xy* white balance chromaticity coordinates.
- **CCT_calibration_illuminant_1** (numeric) – Correlated colour temperature of *CalibrationIlluminant1*.
- **CCT_calibration_illuminant_2** (numeric) – Correlated colour temperature of *CalibrationIlluminant2*.
- **M_color_matrix_1** (array_like) – *ColorMatrix1* tag matrix.
- **M_color_matrix_2** (array_like) – *ColorMatrix2* tag matrix.
- **M_camera_calibration_1** (array_like) – *CameraCalibration1* tag matrix.
- **M_camera_calibration_2** (array_like) – *CameraCalibration2* tag matrix.
- **analog_balance** (array_like) – *AnalogBalance* tag vector.

Returns CIE XYZ to Camera Space matrix.

Return type ndarray

Notes

- The reference illuminant is D50 as defined per `colour_hdri.models.datasets.dng.ADOBE_DNG_XYZ_ILLUMINANT` attribute.

                                       chromatic_adaptation_transform='Bradford')

```

Returns the *Camera Space* to *CIE XYZ* matrix for given *xy* white balance chromaticity coordinates.

Parameters

- **xy** (array_like) – *xy* white balance chromaticity coordinates.
- **CCT_calibration_illuminant_1** (numeric) – Correlated colour temperature of *CalibrationIlluminant1*.
- **CCT_calibration_illuminant_2** (numeric) – Correlated colour temperature of *CalibrationIlluminant2*.
- **M_color_matrix_1** (array_like) – *ColorMatrix1* tag matrix.
- **M_color_matrix_2** (array_like) – *ColorMatrix2* tag matrix.
- **M_camera_calibration_1** (array_like) – *CameraCalibration1* tag matrix.
- **M_camera_calibration_2** (array_like) – *CameraCalibration2* tag matrix.
- **analog_balance** (array_like) – *AnalogBalance* tag vector.
- **M_forward_matrix_1** (array_like) – *ForwardMatrix1* tag matrix.
- **M_forward_matrix_2** (array_like) – *ForwardMatrix2* tag matrix.
- **chromatic_adaptation_transform** (unicode, optional) – {'CAT02', 'XYZ Scaling', 'Von Kries', 'Bradford', 'Sharp', 'Fairchild', 'CMCCAT97', 'CMCCAT2000', 'CAT02_BRILL_CAT', 'Bianco', 'Bianco PC'}, Chromatic adaptation transform.

Returns *Camera Space* to *CIE XYZ* matrix.

Return type ndarray

RGB Models

`colour_hdri`

| | |
|--|---|
| <code>camera_space_to_RGB(</code> <i>RGB</i> <code>,</code> ...) | Converts given <i>RGB</i> array from <i>camera space</i> to given <i>RGB</i> colourspace. |
| <code>camera_space_to_sRGB(</code> <i>RGB</i> <code>,</code> <code>M_XYZ_to_camera_space</code>) | Converts given <i>RGB</i> array from <i>camera space</i> to <i>sRGB</i> colourspace. |

colour_hdri.camera_space_to_RGB

colour_hdri.camera_space_to_RGB(*RGB*, *M_XYZ_to_camera_space*, *RGB_to_XYZ_matrix*)
Converts given *RGB* array from *camera space* to given *RGB* colourspace.

Parameters

- **RGB** (array_like) – Camera space *RGB* colourspace array.
- **XYZ_to_camera_matrix** (array_like) – Matrix converting from *CIE XYZ* tristimulus values to *camera space*.
- **RGB_to_XYZ_matrix** (array_like) – Matrix converting from *RGB* colourspace to *CIE XYZ* tristimulus values.

Returns *RGB* colourspace array.

Return type ndarray

Examples

```
>>> RGB = np.array([0.80660, 0.81638, 0.65885])
>>> M_XYZ_to_camera_space = np.array([
...     [0.47160000, 0.06030000, -0.08300000],
...     [-0.77980000, 1.54740000, 0.24800000],
...     [-0.14960000, 0.19370000, 0.66510000]])
>>> RGB_to_XYZ_matrix = np.array([
...     [0.41238656, 0.35759149, 0.18045049],
...     [0.21263682, 0.71518298, 0.07218020],
...     [0.01933062, 0.11919716, 0.95037259]])
>>> camera_space_to_RGB(
...     RGB,
...     M_XYZ_to_camera_space,
...     RGB_to_XYZ_matrix)
array([ 0.7564180...,  0.8683192...,  0.6044589...])
```

colour_hdri.camera_space_to_sRGB

colour_hdri.camera_space_to_sRGB(*RGB*, *M_XYZ_to_camera_space*)
Converts given *RGB* array from *camera space* to *sRGB* colourspace.

Parameters

- **RGB** (array_like) – Camera space *RGB* colourspace array.
- **M_XYZ_to_camera_space** (array_like) – Matrix converting from *CIE XYZ* tristimulus values to *camera space*.

Returns *sRGB* colourspace array.

Return type ndarray

Examples

```
>>> RGB = np.array([0.80660, 0.81638, 0.65885])
>>> M_XYZ_to_camera_space = np.array([
...     [0.47160000, 0.06030000, -0.08300000],
...     [-0.77980000, 1.54740000, 0.24800000],
...     [-0.14960000, 0.19370000, 0.66510000]])
>>> camera_space_to_sRGB(RGB, M_XYZ_to_camera_space)
array([ 0.7564350...,  0.8683155...,  0.6044706...])
```

Plotting

- *HDRI / Radiance Image*
- *Tonemapping Operators*

HDRI / Radiance Image

colour_hdri.plotting

| | | |
|--|------------------------------------|---|
| <code>plot_radiance_image_strip</code> | <code>(image[, count, ...])</code> | Plots given HDRI / radiance image as strip of images of varying exposure. |
|--|------------------------------------|---|

colour_hdri.plotting.plot_radiance_image_strip

```
colour_hdri.plotting.plot_radiance_image_strip(image, count=5, ev_steps=-2, cctf_encoding=<function eotf_inverse_sRGB>, **kwargs)
```

Plots given HDRI / radiance image as strip of images of varying exposure.

Parameters

- **image** (array_like) – HDRI / radiance image to plot.
- **count** (int, optional) – Strip images count.
- **ev_steps** (numeric, optional) – Exposure variation for each image of the strip.
- **cctf_encoding** (callable, optional) – Encoding colour component transfer function / opto-electronic transfer function used for plotting.

Other Parameters ****kwargs** (*dict, optional*) – {colour.plotting.display()}, Please refer to the documentation of the previously listed definition.

Returns Current figure and axes.

Return type tuple

Tonemapping Operators

colour_hdri.plotting

| | |
|--|--|
| <code>plot_tonemapping_operator_image(image, ...)</code> | Plots given tonemapped image with superimposed luminance mapping function. |
|--|--|

colour_hdri.plotting.plot_tonemapping_operator_image

colour_hdri.plotting.`plot_tonemapping_operator_image`(*image*, *luminance_function*,
log_scale=False,
cctf_encoding=<function
eotf_inverse_sRGB>, ***kwargs*)

Plots given tonemapped image with superimposed luminance mapping function.

Parameters

- **image** (array_like) – Tonemapped image to plot.
- **luminance_function** (callable) – Luminance mapping function.
- **log_scale** (bool, optional) – Use a log scale for plotting the luminance mapping function.
- **cctf_encoding** (callable, optional) – Encoding colour component transfer function / opto-electronic transfer function used for plotting.

Other Parameters ***kwargs* (*dict*, *optional*) – {`colour.plotting.render()`}, Please refer to the documentation of the previously listed definition.

Returns Current figure and axes.

Return type tuple

|----------------------------|---|

colour_hdri.convert_raw_files_to_dng_files

`colour_hdri.convert_raw_files_to_dng_files(raw_files, output_directory)`
 Converts given raw files to *dng* files using given output directory.

Parameters

- **raw_files** (array_like) – Raw files to convert to *dng* files.
- **output_directory** (unicode) – Output directory.

Returns *dng* files.

Return type list

colour_hdri.RAW_CONVERTER

`colour_hdri.RAW_CONVERTER = 'dcraw'`

Command line raw conversion application, usually Dave Coffin's *dcraw*.

RAW_CONVERTER : unicode

colour_hdri.RAW_CONVERSION_ARGUMENTS

`colour_hdri.RAW_CONVERSION_ARGUMENTS = '-t 0 -D -W -4 -T "{0}"'`

Arguments for the command line raw conversion application for non demosaiced linear *tiff* file format output.

RAW_CONVERSION_ARGUMENTS : unicode

colour_hdri.RAW_D_CONVERSION_ARGUMENTS

`colour_hdri.RAW_D_CONVERSION_ARGUMENTS = '-t 0 -H 1 -r 1 1 1 1 -4 -q 3 -o 0 -T "{0}"'`

Arguments for the command line raw conversion application for demosaiced linear *tiff* file format output.

RAW_D_CONVERSION_ARGUMENTS : unicode

DNG Files

colour_hdri

| <code>convert_dng_files_to_intermediate_files(...)</code> | Converts given <i>dng</i> files to intermediate <i>tiff</i> files using given output directory. |
| DNG_CONVERTER | |
| DNG_CONVERSION_ARGUMENTS | Arguments for the command line <i>dng</i> conversion application. |
| DNG_EXIF_TAGS_BINDING | Exif tags binding for a <i>dng</i> file. |
| <code>read_dng_files_exif_tags(dng_files[, ...])</code> | Reads given <i>dng</i> files exif tags using given binding. |

`colour_hdri.convert_dng_files_to_intermediate_files`

`colour_hdri.convert_dng_files_to_intermediate_files(dng_files, output_directory, demosaicing=False)`

Converts given *dng* files to intermediate *tiff* files using given output directory.

Parameters

- **dng_files** (array_like) – *dng* files to convert to intermediate *tiff* files.
- **output_directory** (str) – Output directory.
- **demosaicing** (bool) – Perform demosaicing on conversion.

Returns Intermediate *tiff* files.

Return type list

`colour_hdri.DNG_CONVERTER`

`colour_hdri.DNG_CONVERTER = None`

`colour_hdri.DNG_CONVERSION_ARGUMENTS`

`colour_hdri.DNG_CONVERSION_ARGUMENTS = '-cr7.1 -l -d "{0}" "{1}"'`

Arguments for the command line *dng* conversion application.

`DNG_CONVERSION_ARGUMENTS : unicode`

`colour_hdri.DNG_EXIF_TAGS_BINDING`

`colour_hdri.DNG_EXIF_TAGS_BINDING = CaseInsensitiveMapping({'EXIF': CaseInsensitiveMapping({'Make': (<fun`
Exif tags binding for a *dng* file.

`DNG_EXIF_TAGS_BINDING : CaseInsensitiveMapping`

`colour_hdri.read_dng_files_exif_tags`

```
colour_hdri.read_dng_files_exif_tags(dng_files, exif_tags_binding=CaseInsensitiveMapping({'EXIF':
CaseInsensitiveMapping({'Make': (<function
parse_exif_string>, None), 'Camera Model Name':
(<function parse_exif_string>, None), 'Camera Serial

Neutral': (<function <lambda>>, '1 1 1'), 'Baseline
Exposure': (<function <lambda>>, None), 'Baseline
Noise': (<function <lambda>>, None)}))}))
```

Reads given *dng* files exif tags using given binding.

Parameters

- **dng_files** (array_like) – *dng* files to read the exif tags from.
- **exif_tags_binding** (dict_like) – Exif tags binding.

Returns *dng* files exif tags.

Return type `list`

Highlights Recovery

- *Clipped Highlights Recovery*

Clipped Highlights Recovery

colour_hdri

| | |
|--|--|
| <code>highlights_recovery_blend(</code> RGB, multipliers) | Performs highlights recovery using <i>Coffin (1997)</i> method from <i>dcraw</i> . |
| <code>highlights_recovery_LCHab(</code> RGB[, threshold, ...]) | Performs highlights recovery in <i>CIE L*C*Hab</i> colourspace. |

colour_hdri.highlights_recovery_blend

`colour_hdri.highlights_recovery_blend(`RGB, multipliers, threshold=0.99)
Performs highlights recovery using *Coffin (1997)* method from *dcraw*.

Parameters

- **RGB** (array_like) – RGB colourspace array.
- **multipliers** (array_like) – Normalised camera white level or white balance multipliers.
- **threshold** (numeric, optional) – Threshold for highlights selection.

Returns Highlights recovered RGB colourspace array.

Return type ndarray

References

[Cof15]

colour_hdri.highlights_recovery_LCHab

`colour_hdri.highlights_recovery_LCHab(`RGB, threshold=None, RGB_colourspace=RGB_Colourspace(sRGB[[[0.64, 0.33]], [0.3, 0.6]], [0.15, 0.06]], [0.3127, 0.329], D65[[[0.4124, 0.3576, 0.1805]], [0.2126, 0.7152, 0.0722]], [0.0193, 0.1192, 0.9505]])[[[3.2406, -1.5372, -0.4986]], [-0.9689, 1.8758, 0.0415]], [0.0557, -0.204, 1.057]], <function eotf_inverse_sRGB>, <function eotf_sRGB>, False, False))
Performs highlights recovery in *CIE L*C*Hab* colourspace.

Parameters

- **RGB** (array_like) – RGB colourspace array.
- **threshold** (numeric, optional) – Threshold for highlights selection, automatically computed if not given.

- **RGB_colourspace** (RGB_Colourspace, optional) – Working *RGB* colourspace to perform the *CIE L*C*Hab* to and from.

Returns Highlights recovered *RGB* colourspace array.

Return type ndarray

Image Sampling

- *Viriyothai (2009)*
- *Grossberg (2013)*

Viriyothai (2009)

colour_hdri

`light_probe_sampling_variance_minimization_Viriyothai2009` Sample given light probe to find lights using *Viriyothai (2009)* variance minimization light probe sampling algorithm.

colour_hdri.light_probe_sampling_variance_minimization_Viriyothai2009

```
colour_hdri.light_probe_sampling_variance_minimization_Viriyothai2009(light_probe,
    lights_count=16,
    colourspace=RGB_Colourspace(sRGB[[[
        0.64, 0.33 ]],
        0.3, 0.6 ]],
        0.15, 0.06 ]],
        0.3127, 0.329 ],
        D65[[[ 0.4124,
        0.3576, 0.1805
        ]], 0.2126,
        0.7152, 0.0722
        ]], 0.0193,
        0.1192, 0.9505
        ]][[ 3.2406,
        -1.5372, -0.4986
        ]], -0.9689,
        1.8758, 0.0415
        ]], 0.0557, -
        0.204, 1.057
        ]], <function
        eotf_inverse_sRGB>,
        <function
        eotf_sRGB>,
        False, False))
```

Sample given light probe to find lights using *Viriyothai (2009)* variance minimization light probe sampling algorithm.

Parameters

- **light_probe** (array_like) – Array to sample for lights.

- **lights_count** (*int*) – Amount of lights to generate.
- **colourspace** (*colour.RGB_Colourspace*, optional) – *RGB* colourspace used for internal *Luminance* computation.

Returns list of `colour_hdri.sampling.variance_minimization.Light_Specification` lights.

Return type `list`

[VD09]

Grossberg (2013)

`colour_hdri`

| | |
|---|--|
| <code>samples_Grossberg2003(image_stack[, samples,</code> | Returns the samples for given image stack intensity histograms using <i>Grossberg (2003)</i> method. |
|---|--|

`colour_hdri.samples_Grossberg2003`

`colour_hdri.samples_Grossberg2003(image_stack, samples=1000, n=256)`

Returns the samples for given image stack intensity histograms using *Grossberg (2003)* method.

Parameters

- **image_stack** (*array_like*) – Stack of single channel or multi-channel floating point images.
- **samples** (*int*, optional) – Samples count.
- **n** (*int*, optional) – Histograms bins count.

Returns Intensity histograms samples.

Return type `ndarray`

colour_hdri.tonemapping_operator_gamma

colour_hdri.tonemapping_operator_gamma(*RGB*, *gamma*=1, *EV*=0)

Performs given *RGB* array tonemapping using the gamma and exposure correction method.

Parameters

- **RGB** (array_like) – *RGB* array to perform tonemapping onto.
- **gamma** (numeric, optional) – γ correction value.
- **EV** (numeric, optional) – Exposure adjustment value.

Returns Tonemapped *RGB* array.

Return type ndarray

  eotf_inverse_sRGB>, <function
  eotf_sRGB>, False, False))
```

Performs given *RGB* array tonemapping using the logarithmic mapping method.

Parameters

- **RGB** (*array_like*) – *RGB* array to perform tonemapping onto.
- **p** (*numeric*, *optional*) – *p*.
- **q** (*numeric*, *optional*) – *q*.
- **colourspace** (*colour.RGB_Colourspace*, *optional*) – *RGB* colourspace used for internal *Luminance* computation.

Returns Tonemapped *RGB* array.

Return type *ndarray*

        [ 1.6399638...,  0.8549608...,  0.5518382...]])
```

`colour_hdri.tonemapping_operator_exponentiation_mapping`

```
colour_hdri.tonemapping_operator_exponentiation_mapping(RGB, p=1, q=1,
    colourspace=RGB_Colourspace(sRGB[[[
        0.64, 0.33][[ 0.3, 0.6][[ 0.15,
        0.06]]][[ 0.3127, 0.329],
        D65[[[ 0.4124, 0.3576, 0.1805
        ]][[ 0.2126, 0.7152, 0.0722
        ]][[ 0.0193, 0.1192, 0.9505 ]
        ]][[ 3.2406, -1.5372, -0.4986
        ]][[ -0.9689, 1.8758, 0.0415
        ]][[ 0.0557, -0.204, 1.057 ]]),
    <function eotf_inverse_sRGB>,
    <function eotf_sRGB>, False,
    False))
```

Performs given *RGB* array tonemapping using the exponentiation mapping method.

Parameters

- **RGB** (*array_like*) – *RGB* array to perform tonemapping onto.
- **p** (*numeric*, optional) – *p*.
- **q** (*numeric*, optional) – *q*.
- **colourspace** (*colour.RGB_Colourspace*, optional) – *RGB* colourspace used for internal *Luminance* computation.

Returns Tonemapped *RGB* array.

Return type *ndarray*

        eotf_inverse_sRGB>, <function eotf_sRGB>,
        False, False)
```

Performs given *RGB* array tonemapping using *Schlick (1994)* method.

Parameters

- **RGB** (*array_like*) – *RGB* array to perform tonemapping onto.
- **p** (*numeric, optional*) – *p*.
- **colourspace** (*colour.RGB_Colourspace, optional*) – *RGB* colourspace used for internal *Luminance* computation.

Returns Tonemapped *RGB* array.

Return type ndarray

    1.057 ]], <function eotf_inverse_sRGB>,
    <function eotf_sRGB>, False, False)
```

Performs given *RGB* array tonemapping using *Tumblin, Hodgins and Guenter (1999)* method.

Parameters

- **RGB** (array_like) – *RGB* array to perform tonemapping onto.
- **L_da** (numeric, optional) – L_{da} display adaptation luminance, a mid-range display value.
- **C_max** (numeric, optional) – C_{max} maximum contrast available from the display.
- **L_max** (numeric, optional) – L_{max} maximum display luminance.
- **colourspace** (*colour.RGB_Colourspace*, optional) – *RGB* colourspace used for internal *Luminance* computation.

Returns Tonemapped *RGB* array.

Return type ndarray

1.057 ] ]], <function eotf_inverse_sRGB>,
                                               <function eotf_sRGB>, False, False))
```

Performs given *RGB* array tonemapping using *Reinhard and Devlin (2004)* method.

Parameters

- **RGB** (array_like) – *RGB* array to perform tonemapping onto.
- **f** (numeric, optional) – *f*.
- **m** (numeric, optional) – *m*.
- **a** (numeric, optional) – *a*.
- **c** (numeric, optional) – *c*.
- **colourspace** (*colour.RGB_Colourspace*, optional) – *RGB* colourspace used for internal *Luminance* computation.

Returns Tonemapped *RGB* array.

Return type ndarray

colour_hdri.tonemapping_operator_filmic

`colour_hdri.tonemapping_operator_filmic(RGB, shoulder_strength=0.22, linear_strength=0.3, linear_angle=0.1, toe_strength=0.2, toe_numerator=0.01, toe_denominator=0.3, exposure_bias=2, linear_whitepoint=11.2)`

Performs given *RGB* array tonemapping using *Habbe (2010)* method.

Parameters

- **RGB** (array_like) – *RGB* array to perform tonemapping onto.
- **shoulder_strength** (numeric, optional) – Shoulder strength.
- **linear_strength** (numeric, optional) – Linear strength.
- **linear_angle** (numeric, optional) – Linear angle.
- **toe_strength** (numeric, optional) – Toe strength.
- **toe_numerator** (numeric, optional) – Toe numerator.
- **toe_denominator** (numeric, optional) – Toe denominator.
- **exposure_bias** (numeric, optional) – Exposure bias.
- **linear_whitepoint** (numeric, optional) – Linear whitepoint.

Returns Tonemapped *RGB* array.

Return type ndarray

Utilities

- *Common*
- *EXIF Data Manipulation*
- *Image Data & Metadata Utilities*

Common

colour_hdri

| | |
|--|---|
| <code>vivification()</code> | Implements supports for vivification of the underlying dict like data-structure, magical! |
| <code>vivified_to_dict(vivified)</code> | Converts given vivified data-structure to dictionary. |
| <code>path_exists(path)</code> | Returns if given path exists. |
| <code>filter_files(directory, extensions)</code> | Filters given directory for files matching given extensions. |

colour_hdri.vivification

colour_hdri.vivification()

Implements supports for vivification of the underlying dict like data-structure, magical!

Returns

Return type defaultdict

Examples

```
>>> vivified = vivification()
>>> vivified['my']['attribute'] = 1
>>> vivified['my']
defaultdict(<function vivification at 0x...>, {u'attribute': 1})
>>> vivified['my']['attribute']
1
```

colour_hdri.vivified_to_dict

colour_hdri.vivified_to_dict(vivified)

Converts given vivified data-structure to dictionary.

Parameters **vivified** (defaultdict) – Vivified data-structure.

Returns

Return type dict

Examples

```
>>> vivified = vivification()
>>> vivified['my']['attribute'] = 1
>>> vivified_to_dict(vivified)
{u'my': {u'attribute': 1}}
```

colour_hdri.path_exists

colour_hdri.path_exists(path)

Returns if given path exists.

Parameters **path** (unicode) – Path to check the existence.

Returns

Return type bool

Examples

```
>>> path_exists(__file__)
True
>>> path_exists('')
False
```

colour_hdri.filter_files

colour_hdri.**filter_files**(*directory*, *extensions*)

Filters given directory for files matching given extensions.

Parameters

- **directory** (unicode) – Directory to filter.
- **extensions** (tuple or list) – Extensions to filter on.

Returns Filtered files.

Return type list

EXIF Data Manipulation

colour_hdri

| | |
|--|---|
| EXIF_EXECUTABLE | Command line exif manipulation application, usually Phil Harvey's <i>ExifTool</i> . |
| ExifTag | Hunt colour appearance model induction factors. |
| parse_exif_string(exif_tag) | Parses given exif tag assuming it is a string and return its value. |
| parse_exif_numeric(exif_tag[, dtype]) | Parses given exif tag assuming it is a numeric type and return its value. |
| parse_exif_fraction(exif_tag[, dtype]) | Parses given exif tag assuming it is a fraction and return its value. |
| parse_exif_array(exif_tag[, dtype, shape]) | Parses given exif tag assuming it is an array and return its value. |
| parse_exif_data(data) | Parses given exif data output from <i>exiftool</i> . |
| read_exif_tags(image) | Returns given image exif image tags. |
| copy_exif_tags(source, target) | Copies given source image file exif tag to given image target. |
| update_exif_tags(images) | Updates given images siblings images pairs exif tags. |
| delete_exif_tags(image) | Deletes all given image exif tags. |
| read_exif_tag(image, tag) | Returns given image exif tag value. |
| write_exif_tag(image, tag, value) | Sets given image exif tag value. |

colour_hdri.EXIF_EXECUTABLE

`colour_hdri.EXIF_EXECUTABLE = 'exiftool'`

Command line exif manipulation application, usually Phil Harvey's *ExifTool*.

EXIF_EXECUTABLE : unicode

colour_hdri.ExifTag

class `colour_hdri.ExifTag`

Hunt colour appearance model induction factors.

Parameters

- **group** (unicode, optional) – Exif tag group name.
- **name** (unicode, optional) – Exif tag name.
- **value** (`object`, optional) – Exif tag value.
- **identifier** (numeric, optional) – Exif tag identifier.

Returns a new instance of the `colour_hdri.ExifTag` class.

`__init__()`

Initialize self. See `help(type(self))` for accurate signature.

Methods

| | |
|--|---|
| <code>__init__</code> | Initialize self. |
| <code>count(value)</code> | |
| <code>index(value, [start, [stop]])</code> | Raises <code>ValueError</code> if the value is not present. |

Attributes

| | |
|-------------------------|--------------------------|
| <code>group</code> | Alias for field number 0 |
| <code>identifier</code> | Alias for field number 3 |
| <code>name</code> | Alias for field number 1 |
| <code>value</code> | Alias for field number 2 |

colour_hdri.parse_exif_string

`colour_hdri.parse_exif_string(exif_tag)`

Parses given exif tag assuming it is a string and return its value.

Parameters `exif_tag` (`ExifTag`) – Exif tag to parse.

Returns Parsed exif tag value.

Return type unicode

`colour_hdri.parse_exif_numeric`

`colour_hdri.parse_exif_numeric(exif_tag, dtype=<class 'numpy.float64'>)`
Parses given exif tag assuming it is a numeric type and return its value.

Parameters

- **exif_tag** (`ExifTag`) – Exif tag to parse.
- **dtype** (`object`, optional) – Return value data type.

Returns Parsed exif tag value.

Return type numeric

`colour_hdri.parse_exif_fraction`

`colour_hdri.parse_exif_fraction(exif_tag, dtype=<class 'numpy.float64'>)`
Parses given exif tag assuming it is a fraction and return its value.

Parameters

- **exif_tag** (`ExifTag`) – Exif tag to parse.
- **dtype** (`object`, optional) – Return value data type.

Returns Parsed exif tag value.

Return type numeric

`colour_hdri.parse_exif_array`

`colour_hdri.parse_exif_array(exif_tag, dtype=<class 'numpy.float64'>, shape=None)`
Parses given exif tag assuming it is an array and return its value.

Parameters

- **exif_tag** (`ExifTag`) – Exif tag to parse.
- **dtype** (`object`, optional) – Return value data type.
- **shape** (`array_like`, optional) – Shape of

Returns Parsed exif tag value.

Return type ndarray

`colour_hdri.parse_exif_data`

`colour_hdri.parse_exif_data(data)`
Parses given exif data output from `exiftool`.

Parameters `data` (`unicode`) – Exif data.

Returns Parsed exif data.

Return type list

colour_hdri.read_exif_tags

colour_hdri.**read_exif_tags**(*image*)
Returns given image exif image tags.

Parameters **image** (unicode) – Image file.

Returns Exif tags.

Return type defaultdict

colour_hdri.copy_exif_tags

colour_hdri.**copy_exif_tags**(*source, target*)
Copies given source image file exif tag to given image target.

Parameters

- **source** (unicode) – Source image file.
- **target** (unicode) – Target image file.

Returns Definition success.

Return type bool

colour_hdri.update_exif_tags

colour_hdri.**update_exif_tags**(*images*)
Updates given images siblings images pairs exif tags.

Parameters **images** (*list*) – Image files to update.

Returns Definition success.

Return type bool

colour_hdri.delete_exif_tags

colour_hdri.**delete_exif_tags**(*image*)
Deletes all given image exif tags.

Parameters **image** (unicode) – Image file.

Returns Definition success.

Return type bool

colour_hdri.read_exif_tag

colour_hdri.**read_exif_tag**(*image, tag*)
Returns given image exif tag value.

Parameters

- **image** (unicode) – Image file.
- **tag** (unicode) – Tag.

Returns Tag value.

Return type unicode

colour_hdri.write_exif_tag

`colour_hdri.write_exif_tag(image, tag, value)`
 Sets given image exif tag value.

Parameters

- **image** (unicode) – Image file.
- **tag** (unicode) – Tag.
- **value** (unicode) – Value.

Returns Definition success.

Return type `bool`

Image Data & Metadata Utilities

colour_hdri

| | |
|-------------------------------|--|
| Metadata | Defines the base object for storing exif metadata relevant to HDRI / radiance image generation. |
| Image([path, data, metadata]) | Defines the base object for storing an image along its path, pixel data and metadata needed for HDRI / radiance images generation. |
| ImageStack() | Defines a convenient stack storing a sequence of images for HDRI / radiance images generation. |

colour_hdri.Metadata

class colour_hdri.Metadata

Bases: colour_hdri.utilities.image.Metadata

Defines the base object for storing exif metadata relevant to HDRI / radiance image generation.

Parameters

- **f_number** (array_like) – Image *FNumber*.
- **exposure_time** (array_like) – Image *Exposure Time*.
- **iso** (array_like) – Image *ISO*.
- **black_level** (array_like) – Image *Black Level*.
- **white_level** (array_like) – Image *White Level*.
- **white_balance_multipliers** (array_like) – Image white balance multipliers, usually the *As Shot Neutral* matrix.

Create new instance: `Metadata(f_number, exposure_time, iso, black_level, white_level, white_balance_multipliers)`

colour_hdri.Image**class** colour_hdri.Image(*path=None, data=None, metadata=None*)Bases: `object`

Defines the base object for storing an image along its path, pixel data and metadata needed for HDRI / radiance images generation.

Parameters

- **path** (unicode, optional) – Image path.
- **data** (array_like, optional) – Image pixel data array.
- **metadata** (*Metadata*, optional) – Image exif metadata.

path**data****metadata****read_data()****read_metadata()****property data**Property for **self._data** private attribute.**Returns** `self._data`.**Return type** unicode**property metadata**Property for **self._metadata** private attribute.**Returns** `self._metadata`.**Return type** unicode**property path**Property for **self._path** private attribute.**Returns** `self._path`.**Return type** unicode**read_data(cctf_decoding=None)**Reads image pixel data at `Image.path` attribute.

Parameters **cctf_decoding** (*object*, optional) – Decoding colour component transfer function (Decoding CCTF) or electro-optical transfer function (EOTF / EOCF).

Returns Image pixel data.**Return type** ndarray**read_metadata()**Reads image relevant exif metadata at `Image.path` attribute.**Returns** Image relevant exif metadata.**Return type** *Metadata*

colour_hdri.ImageStack

class colour_hdri.ImageStack

Bases: `collections.abc.MutableSequence`

Defines a convenient stack storing a sequence of images for HDRI / radiance images generation.

ImageStack()

__init__()

__getitem__()

__setitem__()

__delitem__()

__len__()

__getattr__()

__setattr__()

sort()

insert()

from_files()

static from_files(*image_files*, *cctf_decoding=None*)

Returns a `colour_hdri.ImageStack` instance with given image files.

Parameters

- **image_files** (*array_like*) – Image files.
- **cctf_decoding** (*object*, optional) – Decoding colour component transfer function (Decoding CCTF) or electro-optical transfer function (EOTF / EOCF).

Returns

Return type *ImageStack*

insert(*index*, *value*)

Reimplements the `MutableSequence.insert()` method.

Parameters

- **index** (*int*) – Item index.
- **value** (*object*) – Item value.

sort(*key=None*)

Sorts the underlying data structure.

Parameters **key** (*callable*) – Function of one argument that is used to extract a comparison key from each data structure.
