Contents:

containers

Containers is a python module to easily manipulate app containers conforming to the [App Container Specification](#) version 0.3.0.

Installation

At the command line:

```
$ pip install containers
```

Usage

3.1 Containers module

`containers.simple_discovery` (*name*, *var=None*, *secure=True*)

Perform simple discovery and save the discovered ACI locally.

Parameters

- **name** (*str.*) – Name of app.
- **var** (*str.*) – Directory to save ACI to.
- **secure** (*bool.*) – Choose to use HTTPS or HTTP.

Returns *str* – the name of the ACI.

Credits
