
CookieCutter Blog Post

Release 0.0.1

Oct 21, 2019

1	Setup	3
2	License	5
3	Indices and tables	7

A CookieCutter project template for blog posts on the www.DouglasDaly.com platform.

CHAPTER 1

Setup

To create a new project run:

```
$ cookiecutter gh:douglasdaly/cookiecutter-blog-post
```

Follow the prompts to fill in the relevant information about your new post:

project_name: The name of the project/post to create.

repo_name: The repository name to use for this new post.

project_location: The absolute or relative location to the main project folder.

media_location: The location relative to the `project_location` where the media files can be found.

post_icon_image: The name of the post's icon image file to use (place this file in the local post's `media` folder).

asset_prefix: String to prefix all assets used in the post with when uploading to the site.

python_interpreter: Python interpreter to use on the local system.

package_manager: Package manager to use on the local system.

Once you've done this you're ready to get to work on your new blog post! You can find the initial (blank-ish) `post.md` file in the `posts` directory.

CHAPTER 2

License

This project is licensed under the MIT license, the `LICENSE` file is reproduced below:
