CHAPTER 1

ctx_to_zooniverse

Code to support the ingestion of MRO CTX data into the Zooniverse Citizen Science system.

- Free software: MIT license
- Documentation: <https://ctx-to-zooniverse.readthedocs.io>.

1.1 Features

- TODO

1.2 Credits

This package was created with [Cookiecutter](#) and the forked [michaelaye/cookiecutter-pypackage-conda](#) project template.

CHAPTER 2

Installation

2.1 Stable release

To install ctx_to_zooniverse, run this command in your terminal:

```
$ pip install ctx_to_zooniverse
```

This is the preferred method to install ctx_to_zooniverse, as it will always install the most recent stable release.

If you don't have `pip` installed, this Python installation [guide](#) can guide you through the process.

2.2 From sources

The sources for ctx_to_zooniverse can be downloaded from the [Github repo](#).

You can either clone the public repository:

```
$ git clone git://github.com/michaelaye/ctx_to_zooniverse
```

Or download the [tarball](#):

```
$ curl -OL https://github.com/michaelaye/ctx_to_zooniverse/tarball/master
```

Once you have a copy of the source, you can install it with:

```
$ python setup.py install
```

CHAPTER 3

Usage

To use ctx_to_zooniverse in a project:

```
import ctx_to_zooniverse
```

CHAPTER 4

Contributing

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given.
You can contribute in many ways:

4.1 Types of Contributions

4.1.1 Report Bugs

Report bugs at https://github.com/michaelaye/ctx_to_zooniverse/issues.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

4.1.2 Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with “bug” and “help wanted” is open to whoever wants to implement it.

4.1.3 Implement Features

Look through the GitHub issues for features. Anything tagged with “enhancement” and “help wanted” is open to whoever wants to implement it.

4.1.4 Write Documentation

ctx_to_zooniverse could always use more documentation, whether as part of the official ctx_to_zooniverse docs, in docstrings, or even on the web in blog posts, articles, and such.

4.1.5 Submit Feedback

The best way to send feedback is to file an issue at https://github.com/michaelaye/ctx_to_zooniverse/issues.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

4.2 Get Started!

Ready to contribute? Here's how to set up *ctx_to_zooniverse* for local development.

1. Fork the *ctx_to_zooniverse* repo on GitHub.
2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/ctx_to_zooniverse.git
```

3. Install your local copy into a virtualenv. Assuming you have virtualenvwrapper installed, this is how you set up your fork for local development:

```
$ mkvirtualenv ctx_to_zooniverse
$ cd ctx_to_zooniverse/
$ python setup.py develop
```

4. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

5. When you're done making changes, check that your changes pass flake8 and the tests:

```
$ flake8 ctx_to_zooniverse tests
$ python setup.py test or py.test
```

To get flake8, just pip install them into your conda env.

6. Commit your changes and push your branch to GitHub:

```
$ git add .
$ git commit -m "Your detailed description of your changes."
$ git push origin name-of-your-bugfix-or-feature
```

7. Submit a pull request through the GitHub website.

4.3 Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.
2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in README.rst.
3. The pull request should work for Python 2.6, 2.7, 3.3, 3.4 and 3.5, and for PyPy. Check https://travis-ci.org/michaelaye/ctx_to_zooniverse/pull_requests and make sure that the tests pass for all supported Python versions.

4.4 Tips

To run a subset of tests:

```
$ py.test tests.test_ctx_to_zooniverse
```

CHAPTER 5

Credits

5.1 Development Lead

- K.-Michael Aye <kmichael.aye@gmail.com>, <https://github.com/michaelaye>

5.2 Contributors

- M. Schwamb <mschwamb.astro@gmail.com>

CHAPTER 6

History

6.1 0.1.0 (2019-05-20)

- First release on PyPI.

CHAPTER 7
