
DBLSQD Node.js SDK

Release 0.1.0

Aug 14, 2017

Contents

1	Feed	1
2	Index	3

class Feed()

Class for interacting with a DBLSQD Feed.

Arguments

- **baseUrl** (*string*) – Base URL (i. e. https://feeds.dblsqd.com/:app_token)
- **channel** (*string*) – Feed channel (e. g. “release” or “stable”)
- **arch** (*string*) – Feed processor architecture (e. g. “x86_64”)
- **os** (*string*) – Feed operating system (e. g. “win” or “linux”)
- **type** (*string*) – Artifact type

downloadCallback

This callback provides progress information during the download of a release.

downloadRelease()

Downloads a release to a temporary file.

Arguments

- **version** (*string*) – version number.
- **progressCallback** (*Feed~downloadCallback*) –

Returns **Promise.<filename>** –

getReleases()

Returns all releases from the Feed.

Returns **Array.<Object>** –

getUpdates()

Returns all releases from the Feed that are newer than *version*.

Arguments

- **version** (*string*) – current version

Returns `Array.<Object>` –

load()

Loads a feed from the server.

Returns `Promise` –

setUrl()

Sets feed URL. Calling this method overrides the URL created by the constructor.

Arguments

- **url** (*string*) – Full Feed URL
