6.2	0.1.0 (2014-05-12)	17

Contents:

Django + Webhooks Made Easy

The full documentation is at <https://dj-webhooks.readthedocs.org>.

Requirements

- django>=1.5.5
- django-jsonfield>=0.9.12
- django-model-utils>=2.0.2
- django-rq>=0.6.1
- webhooks>=0.3.1

Quickstart

Install dj-webhooks:

```
pip install dj-webhooks
```

Configure some webhook events:

```
# settings.py
WEBHOOK_EVENTS = (
    "purchase.paid",
    "purchase.refunded",
    "purchase.fulfilled"
)
```

Add some webhook targets:

```
from django.contrib.auth import get_user_model
User = get_user_model()
user = User.objects.get(username="pydanny")

from webhooks.models import Webhook
WebhookTarget.objects.create(
    owner=user,
    event="purchase.paid",
    target_url="https://mystorefront.com/webhooks/",
    header_content_type=Webhook.CONTENT_TYPE_JSON,
)
```

Then use it in a project:

```
from django.contrib.auth import get_user_model
User = get_user_model()
user = User.objects.get(username="pydanny")

from djwebhooks.decorators import hook

from myproject.models import Purchase

# Event argument helps identify the webhook target
@hook(event="purchase.paid")
def send_purchase_confirmation(purchase, owner): # Webhook_owner also helps identify_
↳the webhook target
    return {
        "order_num": purchase.order_num,
        "date": purchase.confirm_date,
        "line_items": [x.skus for x in purchase.lineitem_set.filter(inventory__gt=0)]
    }

for purchase in Purchase.objects.filter(status="paid"):
    send_purchase_confirmation(purchase=purchase, owner=user)
```

In a queue using django-rq

Assuming you are running Redis and also have django-rq configured:

```
from django.contrib.auth import get_user_model
User = get_user_model()
user = User.objects.get(username="pydanny")

# import redis hook
from djwebhooks.decorators import redis_hook

from myproject.models import Purchase

# Event argument helps identify the webhook target
@redis_hook(event="purchase.paid")
def send_purchase_confirmation(purchase, owner): # Webhook_owner also helps identify_
↳the webhook target
    return {
        "order_num": purchase.order_num,
        "date": purchase.confirm_date,
```

```
    "line_items": [x.sku for x in purchase.lineitem_set.filter(inventory__gt=0)]
}

for purchase in Purchase.objects.filter(status="paid"):
    job = send_purchase_confirmation(purchase=purchase, owner=user)
```

Requirements

- Python 2.7.x or 3.3.2 or higher
- Django 1.5 or higher

Features

- Synchronous webhooks
- Delivery tracking via Django ORM.

Planned Features

- Options for asynchronous webhooks
- Delivery tracking via Redis and other write-fast datastores.

CHAPTER 2

Installation

At the command line:

```
$ easy_install dj-webhooks
```

Or, if you have virtualenvwrapper installed:

```
$ mkvirtualenv dj-webhooks  
$ pip install dj-webhooks
```

CHAPTER 3

Usage

To use dj-webhooks in a project:

```
import dj-webhooks
```

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given. You can contribute in many ways:

Types of Contributions

Report Bugs

Report bugs at <https://github.com/pydanny/dj-webhooks/issues>.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with “bug” is open to whoever wants to implement it.

Implement Features

Look through the GitHub issues for features. Anything tagged with “feature” is open to whoever wants to implement it.

Write Documentation

dj-webhooks could always use more documentation, whether as part of the official dj-webhooks docs, in docstrings, or even on the web in blog posts, articles, and such.

Submit Feedback

The best way to send feedback is to file an issue at <https://github.com/pydanny/dj-webhooks/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

Get Started!

Ready to contribute? Here's how to set up *dj-webhooks* for local development.

1. Fork the *dj-webhooks* repo on GitHub.
2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/dj-webhooks.git
```

3. Install your local copy into a virtualenv. Assuming you have virtualenvwrapper installed, this is how you set up your fork for local development:

```
$ mkvirtualenv dj-webhooks
$ cd dj-webhooks/
$ python setup.py develop
```

4. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

5. When you're done making changes, check that your changes pass flake8 and the tests, including testing other Python versions with tox:

```
$ flake8 djwebhooks tests
$ python setup.py test
$ tox
```

To get flake8 and tox, just pip install them into your virtualenv.

6. Commit your changes and push your branch to GitHub:

```
$ git add .
$ git commit -m "Your detailed description of your changes."
$ git push origin name-of-your-bugfix-or-feature
```

7. Submit a pull request through the GitHub website.

Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.
2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in README.rst.
3. The pull request should work for Python 2.6, 2.7, and 3.3, and for PyPy. Check https://travis-ci.org/pydanny/dj-webhooks/pull_requests and make sure that the tests pass for all supported Python versions.

Tips

To run a subset of tests:

```
$ python -m unittest tests.test_djwebhooks
```

Development Lead

Contributors

None yet. Why not be the first?

0.2.0 (2014-05-15)

- Refactored the senders to be very extendable.
- Added an ORM based sender.
- Added a redis based sender that uses django-rq.
- Added a *redis-hook* decorator.
- Added admin views.
- Ramped up test coverage to 89%.
- setup.py now includes all dependencies.

0.1.0 (2014-05-12)

- First release on PyPI.
