*django-proxylist-for-grab* is a reusable app for maintain an up-to-date (through checking) list of proxy servers.

Contents:

# CHAPTER 1

---

## Introduction

---

### Checking proxies

Proxy checking is the core of *django-proxylist-for-grab*, in order to make it you need three things:

- A checker: It shots a request through the proxy.
- A proxy: Of course ...
- A mirror: It's a special page that reflects the checker request and allow us to see how a third page would see us.

# CHAPTER 2

---

## Dependencies

---

*django-proxylist-for-grab* depends on:

### Packages

- django-celery
- django-countries
- pygeoip
- grub

### Backend

#### Cache

The checking machinery uses django's cache backend and the *default* cache but you can alter this behaviour changing the **PROXYLIST\_CACHE** variable.

#### Database

*django-proxylist-for-grab* does not depends on any database backend by itself, but if you have a big list of proxies and you want to check it at sorts intervals you should avoid *SQLite*.

# CHAPTER 3

---

## Installation

---

### Installing the package

*django-proxylist-for-grab* can be easily installed using pip:

```
$ pip install django-proxylist-for-grab
```

### Configuration

After that you need to include *django-proxylist-for-grab* into your *INSTALLED\_APPS* list of your django settings file.

```
INSTALLED_APPS = (
    ...
    'proxylist',
    ...
)
```

*django-proxylist-for-grab* has a list of variables that you can configure through django's settings file. You can see the entire list at Advanced Configuration.

### Database creation

You have two choices here:

#### Using south

We encourage you using *south* for your database migrations. If you already use it you can migrate *django-proxylist-for-grab*:

```
$ python manage.py migrate proxylist
```

## Using syncdb

If you don't want to use *south* you can make a plain *syncdb*:

```
$ python manage.py syncdb
```

## CHAPTER 4

---

Use case

---

# CHAPTER 5

---

## Command reference

---

### **update\_proxies**

Add new proxies from a file.

```
$ python manage.py update_proxies [file1] <file2> <...>
```

### **check\_proxies**

Check proxies availability and anonymity.

```
$ python manage.py check_proxies
```

### **grab\_proxies**

Search proxy list on internet

```
$ python manage.py grab_proxies
```

### **clean\_proxies**

Remove broken proxies

```
$ python manage.py clean_proxies
```

# CHAPTER 6

---

## Advanced configuration

---

PROXYLIST\_CACHE\_TIMEOUT

Maximum number of seconds to mantain a lock at the cache framework.

*Default:* 0

PROXYLIST\_CONNECTION\_TIMEOUT

Number of seconds to wait for a connection to open, before canceling the attempt and generate an error.

*Default:* 30

PROXYLIST\_ERROR\_DELAY

Number of seconds to add to each check if the last one produced an error.

*Default:* 300

PROXYLIST\_GEOIP\_PATH

Path to GeoIP data file.

*Default:* /usr/share/GeoIP/GeoIP.dat

PROXYLIST\_MAX\_CHECK\_INTERVAL

Maximum number of seconds to the next check if the last one was successful.

*Default:* 900

PROXYLIST\_MIN\_CHECK\_INTERVAL

Minimum number of seconds to the next check if the last one was successful.

*Default:* 300

PROXYLIST\_OUTIP\_INTERVAL

Number of seconds between outbound IP checking (per worker). If you have a fixed IP address you can set this value to 0 (infinity).

*Default:* 300

PROXYLIST\_USER\_AGENT

User-Agent for requests.

*Default:* Django-ProxyList 1.0.0

# CHAPTER 7

---

## Indices and tables

---

- genindex
- modindex
- search
