CHAPTER 1

Plugin ebusd

Purpose

This plugin is used to exchange value between ebusd and domogik.

Ebusd used the ebus protocol used in some boiler manufacturer like Saunier Duval, Vaillant, Chaffoteau, etc...

To have more information look at Jhon30 ebusd github: <https://github.com/john30/ebusd/>

Dependencies

You need to make ebusd works and available on TCP

Plugin configuration

Just type you ebusd host:port to connect to it.

Create the devices

Device parameters configuration

1 parameter is need for a domogik device creation ...

Key	Type	Description
address	String	The topic/adress name of the poll sensor

Start the plugin

You can now start the plugin (start button) and use the created devices.

Also use the advanced page to find error log, and discover device available in ebusd. You can click on his name to directly create the device.
