## East-oriented Python

---

East-oriented Python examples, based on James Ladd's "East-oriented" technique <http://jamesladdcode.com/?p=12>.

- Free software: BSD license
- Documentation: <https://eastpy.readthedocs.org>.

### 1.1 Features

- MovieFinder application ported from James Ladd's (@jamesladd) Java version

---

# Installation

---

At the command line:

```
$ easy_install eastpy
```

Or, if you have virtualenvwrapper installed:

```
$ mkvirtualenv eastpy  
$ pip install eastpy
```

---

### Usage

---

To use East-oriented Python in a project:

```
import eastpy
```

---

## Contributing

---

Contributions are welcome, and they are greatly appreciated! Every little bit helps, and credit will always be given. You can contribute in many ways:

### 4.1 Types of Contributions

#### 4.1.1 Report Bugs

Report bugs at <https://github.com/elgertam/eastpy/issues>.

If you are reporting a bug, please include:

- Your operating system name and version.
- Any details about your local setup that might be helpful in troubleshooting.
- Detailed steps to reproduce the bug.

#### 4.1.2 Fix Bugs

Look through the GitHub issues for bugs. Anything tagged with “bug” is open to whoever wants to implement it.

#### 4.1.3 Implement Features

Look through the GitHub issues for features. Anything tagged with “feature” is open to whoever wants to implement it.

#### 4.1.4 Write Documentation

East-oriented Python could always use more documentation, whether as part of the official East-oriented Python docs, in docstrings, or even on the web in blog posts, articles, and such.

#### 4.1.5 Submit Feedback

The best way to send feedback is to file an issue at <https://github.com/elgertam/eastpy/issues>.

If you are proposing a feature:

- Explain in detail how it would work.
- Keep the scope as narrow as possible, to make it easier to implement.
- Remember that this is a volunteer-driven project, and that contributions are welcome :)

## 4.2 Get Started!

Ready to contribute? Here's how to set up *eastpy* for local development.

1. Fork the *eastpy* repo on GitHub.
2. Clone your fork locally:

```
$ git clone git@github.com:your_name_here/eastpy.git
```

3. Install your local copy into a virtualenv. Assuming you have virtualenvwrapper installed, this is how you set up your fork for local development:

```
$ mkvirtualenv eastpy
$ cd eastpy/
$ python setup.py develop
```

4. Create a branch for local development:

```
$ git checkout -b name-of-your-bugfix-or-feature
```

Now you can make your changes locally.

5. When you're done making changes, check that your changes pass flake8 and the tests, including testing other Python versions with tox:

```
$ flake8 eastpy tests
$ python setup.py test
$ tox
```

To get flake8 and tox, just pip install them into your virtualenv.

6. Commit your changes and push your branch to GitHub:

```
$ git add .
$ git commit -m "Your detailed description of your changes."
$ git push origin name-of-your-bugfix-or-feature
```

7. Submit a pull request through the GitHub website.

## 4.3 Pull Request Guidelines

Before you submit a pull request, check that it meets these guidelines:

1. The pull request should include tests.
2. If the pull request adds functionality, the docs should be updated. Put your new functionality into a function with a docstring, and add the feature to the list in README.rst.
3. The pull request should work for Python 2.6, 2.7, 3.3, and 3.4, and for PyPy. Check [https://travis-ci.org/elgertam/eastpy/pull\\_requests](https://travis-ci.org/elgertam/eastpy/pull_requests) and make sure that the tests pass for all supported Python versions.

## 4.4 Tips

To run a subset of tests:

```
$ python -m unittest tests.test_eastpy
```

---

**Credits**

---

## 5.1 Development Lead

- Andrew M Elgert <[andrew.elgert@gmail.com](mailto:andrew.elgert@gmail.com)>

## 5.2 Contributors

- James Ladd

---

## History

---

---

**0.1.0 (2015-10-03)**

---

- First release.

---

**0.1.1 (2015-10-03)**

---

- Fixed some PyPI bugs

---

**0.1.2 (2015-10-05)**

---

- Refactored to be more East
- Fixed some metadata (versions, etc.)

---

## Indices and tables

---

- `genindex`
- `modindex`
- `search`
