Always use your favorite text editor, anywhere.

## Motivation

---

I'm completely addicted to using Vim for editing text. Any time Vim is not around I feel so slow, so inefficient, so cumbersome. Thus I created Edd who enables me to use Vim literally anywhere.

---

### Summary

---

Edd is a tiny script which allows to easily edit content of the clipboard with a single keyboard shortcut. In this way Edd enables you to always use your favorite text editor, wherever you need. The name `edd` is the abbreviation of `EDit clipboard`.

---

## Usage

---

Simple and straightforward:

```
select, edd, paste
```

Use Ctrl-V shortcut to paste the updated text. Some applications support the Ctrl-Shift-V keyboard shortcut for pasting clipboard content as plain text. Try this one if the formatting is broken.

## Options

---

Available command line options are:

- last**                open last edited text
- list**                select text from history list
- shortcut**            set up Alt-Shift-E keyboard shortcut

Note: Shortcut creation works with Gnome 2 and Gnome 3.

---

## Config

---

Edd uses the following environment variables:

**EDITOR** set to the text editor of your choice

**EDD\_CONFIG** path to the config file (default: ~/.edd)

**EDD\_COMMAND** command to be executed by the keyboard shortcut

The default command is:

```
gnome-terminal --command edd
```

Use environment variable or config file to customize it:

```
EDD_COMMAND="gnome-terminal --geometry 111x44 --command edd"
```

**Note:** Run `edd --shortcut` to update the command afterwards.
