edgy.project Documentation

Release 0.3.2

Romain Dorgueil

Jun 14, 2017

Contents

Todo: elevator pitch here

CHAPTER 1

Documentation

1.1 Project Overview

Todo: elevator pitch here

1.2 Configuration Reference

Configuration of your project goes into *Projectfile* at its root. It's a plain python file with a few locals available to make it easy to extend the core feature of *edgy.project*.

The software will parse the file, grab the locals you defined/overrided that it cares about and then run it's generation/update process.

Two kind of things are doable in this file:

- Define/override variables. You'll find the full reference here.

- Add event listeners to extend either core features, or feature-specific features. You'll find the reference of core events here, while the features event reference will be found in *features*.

1.3 Features Reference

All fea

1.3.1 Python Feature

```
enable_features = {'python'}
```

1.3.2 Make Feature
