# README

The *frbr-redis-datastore* project is a proof-of-concept native noSQL bibliographic datastore that interoperates with Library of Congress's MARC MODS, VRA Core, CIDOC CRM, RDA Vocabularies, and others into native Redis keys-values structured as FRBR, FRBRoo and FRAD entities.

## 1.1 Dependencies

- Redis
- Python
- Python Redis Module

# LIB.COMMON AND TESTS.TEST\_COMMON DOCUMENTATION

## 2.1 Overview

The `lib.common` module provides the base class from which other python modules use to interface with the `frbr-redis-datastore` and useful standalone functions for interacting with `RDF` XML and n3 file objects and the `Redis` datastore.

The `tests.test_common` are the unit tests for `lib.common`.
