Welcome to the unofficial documentation of the APIs used by the GOG website and Galaxy client. It's a very young project, so don't be surprised if something is missing. But now get ready for a wild ride into a world where GET and POST don't mean anything and consistency is a lucky mistake.

1.1 Authentication

1.1.1 Introduction

All GOG APIs support token authorization, similar to OAuth2. The web domains www.gog.com, embed.gog.com and some of the Galaxy domains support session cookies too. They both have to be obtained using the GOG login page, because a CAPTCHA may be required to complete the login process.

1.1.2 Auth-Flow

1. Use an embedded browser like WebKit, Gecko or CEF to send the user to <https://auth.gog.com/auth>. An add-on in your desktop browser should work as well. The exact details about the parameters of this request are described below.
2. Once the login process is completed, the user should be redirected to https://www.gog.com/on_login_success with a login “code” appended at the end. Use the callbacks of your browser engine to detect it, take the code and use it to request a token.
3. Renew the token when it expires after about an hour. Check the original response for an accurate lifetime.

1.1.3 Authorizing a Request

To authorize a request set the `Authorization` header to `Bearer <token>`. This has to be done for each call.

Example request:

```
GET /library/windows HTTP/1.1
Host: embed.gog.com
Authorization: Bearer_
↪xpIjnwyncascjBf20yz1n1tu8jo9spxyvy3zlv1L0rfoiiuly2hu5xnfgjysnuyhjqI7cmcatscp3ybgDjeqzwCggttnombuui
↪t6dbqybzYvpoieqtamaKuxpgclnU1t_q4jf_haj2emwgrkzdlkhwinu7o93bpxWrbjdxr
```

1.1.4 Methods

GET /auth

Redirects to the login site. Don't use this directly from your client, it's not a JSON API, visit it with a web browser instead.

Query Parameters

- **client_id** (*str*) – OAuth2 Client ID. Use 46899977096215655.
- **redirect_uri** (*str*) – URL where the browser will be redirected after the login has been completed. Use https://embed.gog.com/on_login_success?origin=client
- **response_type** (*str*) – Use code
- **layout** (*str*) – Use client2

Example request:

```
GET /auth?client_id=46899977096215655&redirect_uri=https%3A%2F%2Fembed.gog.com
↪%2Fon_login_success%3Forigin%3Dclient&response_type=code&layout=client2 HTTP/1.1
Host: auth.gog.com
```

Example redirect:

```
http://localhost:8000/token?
↪code=oF8OSgZVMFb7a8Y3Dolrz4YPqDUnG7TCTsekYKcWnFNcmWWCJH7XJS3RN9d9NB0slx4FS1kss-
↪1lBEXvgkCX8oNTP1u3yYG1p56f35jVZCclrCQMk803k5LmQLKM1Wb7
```

GET /token

Generates a new auth token from a login code or refreshes an old one.

Query Parameters

- **client_id** (*str*) – OAuth2 client ID. Use 46899977096215655
- **client_secret** (*str*) – OAuth2 secret. Use 9d85c43b1482497dbbce61f6e4aa173a433796eeae2ca8c5f6129f2dc4de46d9
- **grant_type** (*str*) – `authorization_code` for new logins, `refresh_token` for refreshs.
- **code** (*str*) – **Only for new logins:** Login code you got from the auth redirect.
- **redirect_uri** (*str*) – **Only for new logins:** The redirect URL you used in the auth request.
- **refresh_token** (*str*) – **Only for refreshes:** The refresh_token you got from an old token. This is a separate entry, not the old access token.

Example request:

```
GET /token?client_id=46899977096215655&client_
↪secret=9d85c43b1482497dbbce61f6e4aa173a433796eeae2ca8c5f6129f2dc4de46d9&grant_
