### Description

---

GridCompute is a cross-platform tool that implements quickly distributed computing over a local grid. The applicaiton is divided into following functionalities:

- send calculations to network
- scan network for calculations to perform, execute them and send results to network
- retrieve results

Gridcompute is easy to setup and adapt to any application. Only a shared folder is required.

---

## Documentation

---

Documentation is available at TBC.

---

**Many thanks to**

---

- Bruno Guigon
- Vianney Da Costa
