
iscowalive

Release 0.1

Feb 27, 2018

Contents

1	About iscowalive	3
1.1	From where does it come from?	3
2	Installation instructions	5
3	How to use it	7
3.1	bin/ica	7
3.2	examples	7
4	How to run the tests	9
4.1	python setup.py test	9
5	Indices and tables	11

This is the official documentation for [iscowalive](#), a simple module that checks if url is available in [Python](#).

Contents:

CHAPTER 1

About iscowalive

Contents

- *About iscowalive*
 - *From where does it come from?*

1.1 From where does it come from?

`iscowalive` was born in a chat with `Andrés` and `Diego` while we were drafting the practical part of a minimum viable package of the `cowlab` meeting..

CHAPTER 2

Installation instructions

Installing *iscowalive* is quite easy. If you have some experience installing Python packages¹, you already know how to do it. *iscowalive* is a standard Python package available on pypi² so just use your favourite tool (`pip`, `easy_install`, etc) to install it:

```
pip install iscowalive
```

```
easy_install iscowalive
```

¹ <http://docs.python.org/tutorial/modules.html#packages>

² <https://pypi.org/project/iscowalive/>

3.1 bin/ica

The library is provided with a cli: *bin/ica*. To ask if an url is alive:

```
$ ./bin/ica url
```

It should return “OK” if it is alive or “KO” if it is not.

3.2 examples

A couple of cli call examples:

```
$ ./bin/ica http://www.google.com
OK

$ ./bin/ica http://www.google.com/404
KO
```

How to run the tests

4.1 python setup.py test

Testing tool depends on *py.test* as we can see in the *setup.cfg*:

```
[aliases]
test=pytest
[tool:pytest]
addopts = --verbose --pep8 --cov iscowalive
python_files = tests/test_*.py
```

The *python setup.py test* command is an alias of *pytest --verbose --pep8 --cov iscowalive* so you can run both:

```
$ python setup.py test
$ pytest --verbose --pep8 --cov iscowalive
```

CHAPTER 5

Indices and tables

- `genindex`
- `modindex`
- `search`
