Release latest

May 25, 2015

1	Installation	3
1.1	Contact	3
1.2	License	3

Google auth plugin for Kallithea source code management system.

Installation

```
pip install kallithea-auth-google
```

In the Kallithea Authentication settings, add `kallithea_auth_google.auth_google`, save, then set the settings.

In your config (`my.ini`):

```
[pipeline:main]
pipeline =
    google-auth
    kallithea

## google auth middleware
[filter:google-auth]
use = egg:kallithea-auth-google#google-auth

[app:kallithea]
use = egg:kallithea#main
## enable google auth middleware
filter-with = google-auth
```

Note that after this change, for all kallithea paster commands you'll need to pass the section name explicitly:

```
paster <command> my.ini --name=kallithea [options]
```
