Kawasemi

kawasemi is a Python library for sending notifications.

Kawasemi provides the following features:

- Very simple ways to send notification
 - GitHub, HipChat, Slack, Twitter, and Yo are supported
- Integrations with web application frameworks helps to load configurations
 - Django is supported

CHAPTER 1

At a Glance

After installation and configuration, you can send notifications with a following simple code:

```
# Python
from kawasemi import Kawasemi
kawasemi = Kawasemi(config)
kawasemi.send("Sample notification.")

# In Django application
from kawasemi.django import send
send("Sample notification.")
```

See Quickstart page for more details.

CHAPTER 2

Contents

2.1 Quickstart

2.1.1 Requirements

Python

- Python 2.7+
- Python 3.4+
- PyPy
- PyPy3

Supported Frameworks

- Django 1.8
- Django 1.11
- Django 2.0

2.1.2 Installation

Install kawasemi with your favorite package manager:

```
pip install kawasemi
```

Note: Please use the latest version of setuptools, pip, and wheel.

```
pip install -U setuptools pip wheel
```

2.1.3 Configurations

You can write the configuration of kawasemi with a dictionary object.

- If you want to send notifications to HipChat:

```
config = {
    "CHANNELS": {
        "hipchat": {
            "_backend": "kawasemi.backends.hipchat.HipChatChannel",
            "api_id": "1234567",
            "token": "ABCDEFGHIJKLMNOPQRSTUVWXYZ1234567890"
        }
    }
}
```

- You can use one or more channels. To send notifications to both HipChat and Slack:

```
config = {
    "CHANNELS": {
        "hipchat": {
            "_backend": "kawasemi.backends.hipchat.HipChatChannel",
            "api_id": "1234567",
            "token": "ABCDEFGHIJKLMNOPQRSTUVWXYZ1234567890"
        },
        "slack": {
            "_backend": "kawasemi.backends.slack.SlackChannel",
            "url": "https://hooks.slack.com/services/ABCDEF/GHIJKL/1234567890"
        }
    }
}
```

- Of course, you can send a message to two different rooms simultaneously. To send notifications to two different HipChat rooms:

```
config = {
    "CHANNELS": {
        "hipchat_first": {
            "_backend": "kawasemi.backends.hipchat.HipChatChannel",
            "api_id": "1234567",
            "token": "ABCDEFGHIJKLMNOPQRSTUVWXYZ1234567890"
        },
        "hipchat_second": {
            "_backend": "kawasemi.backends.hipchat.HipChatChannel",
            "api_id": "3456789",
            "token": "abcdefghijklmnopqrstuvwxyz0987654321"
        }
    }
}
```

2.1.4 Usage

You can send notifications with a following simple code:

```
from kawasemi import Kawasemi

config = {
```

```

"CHANNELS": {
    "hipchat": {
        "_backend": "kawasemi.backends.hipchat.HipChatChannel",
        "api_id": "1234567",
        "token": "ABCDEFGHIJKLMNOPQRSTUVWXYZ1234567890"
    }
}
kawasemi = Kawasemi(config)
kawasemi.send("Sample notification.")
kawasemi.send("Another notification.")

```

Integration with Django

You can load configurations of kawasemi from `settings.py` by using this integration.

1. Add '`kawasemi`' to your `INSTALLED_APPS` setting:

```

INSTALLED_APPS = [
    # Other apps
    'kawasemi.django',
]

```

2. Add `KAWASEMI` to your project settings. You must obtain API keys or tokens from each service.

```

KAWASEMI = {
    "CHANNELS": {
        "hipchat": {
            "_backend": "kawasemi.backends.hipchat.HipChatChannel",
            "api_id": "1234567",
            "token": "ABCDEFGHIJKLMNOPQRSTUVWXYZ1234567890"
        }
    }
}

```

3. You can send notifications with a following simple code:

```

from kawasemi.django import send

send("Sample notification.")

```

2.2 Sending Notification

2.2.1 Simple Notification

You can send a notification to all configured channels with a following code:

```

# Python
from kawasemi import Kawasemi
kawasemi = Kawasemi(config)
kawasemi.send("Sample notification.")

# With Django

```

```
from kawasemi.django import send
send("Sample notification.")
```

2.2.2 Options

You can set some options for the each of backends:

```
kawasemi.send("Sample notification.", options={
    "hipchat": {
        "color": "green"
    },
    "slack": {
        "attachments": [
            {
                "fallback": "Attachment 1",
                "text": "Attachment 1",
                "color": "#36a64f"
            }
        ]
    }
})
```

Please refer to *Backends* for all available options.

2.2.3 Exceptions

You can handle errors by using `try` statement:

```
try:
    kawasemi.send("Sample notification.")
except Exception as e:
    print("Error!!")
    print(e)
```

You can ignore errors with `fail_silently` parameter:

```
import kawasemi

kawasemi.send("Exceptions are ignored.", fail_silently=True)
```

2.2.4 Send to a Specific Channel

By default, notifications are sent to all configured channels. You can send notifications to a channel with `channel` parameter.

Example settings:

```
config = {
    "CHANNELS": {
        "channel_1": {
            # ...
        },
        "channel_2": {

```

```

        # ...
    }
}
}
```

Send a notification to `channel_1`:

```
kawasemi.send("sample notification", channel_name="channel_1")
```

2.3 CLI (Beta)

You can use kawasemi as a command line application. Currently, kawasemi CLI is in beta.

2.3.1 Configuration

Write configuration for kawasemi CLI in a JSON file called `.kawasemirc`:

```
{
    "CHANNELS": {
        "hipchat_first": {
            "_backend": "kawasemi.backends.hipchat.HipChatChannel",
            "api_id": "1234567",
            "token": "ABCDEFGHIJKLMNOPQRSTUVWXYZ1234567890"
        },
        "hipchat_second": {
            "_backend": "kawasemi.backends.hipchat.HipChatChannel",
            "api_id": "3456789",
            "token": "abcdefghijklmnopqrstuvwxyz0987654321"
        }
    }
}
```

2.3.2 Running

Run `kawasemi` command:

```
kawasemi "Hello world!!"
```

Run `kawasemi --help` for more details.

2.4 Backends

Here is a list of available backends and documentation on how to use each backend.

2.4.1 GitHub

[GitHub](#) is online source code hosting service for Git projects.

kawasemi uses one of the [REST API v3](#) for sending notification to GitHub.

Settings

Please refer to this page on how to obtain a token.

```
config = {
    "CHANNELS": {
        "github": {
            "_backend": "kawasemi.backends.github.GitHubChannel",
            # Token
            "token": "ABCDEFGHIJKLMNOPQRSTUVWXYZ1234567890",
            # Owner of the repository
            "owner": "ymyzk",
            # Repository
            "repository": "test-repo"
        }
    }
}
```

Options

You can specify all options available in the REST API v3. For instance:

```
kawasemi.send("Issue Title", options={
    "github": {
        "body": """## ToDo
- [ ] Introduce A
- [ ] Refactor B""",
        "milestone": 123,
        "labels": ["enhancement"],
        "assignees": ["ymyzk"]
    }
})
```

2.4.2 HipChat

HipChat is hosted group chat and video chat for companies and teams.

kawasemi uses one of the Room API for sending notification to HipChat.

Settings

You can obtain a Room API ID and a Room Notification Token from [HipChat Rooms Page](#).

```
config = {
    "CHANNELS": {
        "hipchat": {
            "_backend": "kawasemi.backends.hipchat.HipChatChannel",
            # Required
            # Room API ID
            "api_id": "1234567",
            # Room Notification Token
            "token": "ABCDEFGHIJKLMNOPQRSTUVWXYZ1234567890",
            # Optional
            # Only for HipChat Server
        }
    }
}
```

```

        "base_url": "https://api.hipchat.com/v2/",
        # Background color for message
        # Valid values: yellow, green, red, purple, gray, random
        "color": "random",
        # Whether this message should trigger a user notification
        "notify": True,
        # Determines how the message is treated by HipChat server and rendered
        ↪inside HipChat applications
        # Valid values: html, text
        "message_format": "html"
    }
}
}

```

Options

You can specify all options available in the [Room API](#). For instance:

```
kawasemi.send("Sample notification.", options={
    "hipchat": {
        "color": "green",
        "notify": False,
        "message_format": "text"
    }
})
```

2.4.3 Slack

Slack is a platform for team communication.

kawasemi uses [Incoming WebHooks](#) which is one of the Slack API for sending notifications.

Settings

You can obtain a Webhook URL from [this page](#).

```
config = {
    "CHANNELS": {
        "slack": {
            "_backend": "kawasemi.backends.slack.SlackChannel",
            # Required
            # Webhook URL
            "url": "https://hooks.slack.com/services/ABCDEFGHIJKLM/1234567890",
            # Optional
            "username": "kawasemi",
            # You can set either icon_url or icon_emoji
            "icon_url": "https://slack.com/img/icons/app-57.png",
            "icon_emoji": ":ghost:",
            # Ex. 1 "channel": "#general"
            # Ex. 2 "channel": "@username"
            "channel": "#general"
        }
    }
}
```

Options

You can specify attachments and unfurl_links in options.

Attachments

You can send richly-formatted messages using attachments. For more information on attachments, please refer to [Attachments](#).

Test message with attachments

Attachment 1

Attachment 2

Field 1

Field 1 value

Field 2

Field 2 value

Field 3

Field 3 value

```
kawasemi.send("Test message with attachments", options={
    "slack": {
        "attachments": [
            {
                "fallback": "Attachment 1",
                "text": "Attachment 1",
                "color": "#36a64f"
            },
            {
                "fallback": "Attachment 2",
                "text": "Attachment 2",
                "color": "warning",
                "fields": [
                    {
                        "title": "Field 1",
                        "value": "Field 1 value",
                        "short": False
                    },
                    {
                        "title": "Field 2",
                        "value": "Field 2 value",
                        "short": True
                    },
                    {
                        "title": "Field 3",
                        "value": "Field 3 value",
                        "short": True
                    }
                ]
            }
        ]
    }
})
```

```

        ]
    }
})
```

Unfurling

For more details on unfurl_links, please refer to [Unfurling](#).

```
kawasemi.send("Sample notification.", options={
    "slack": {
        "unfurl_links": True
    }
})
```

2.4.4 Twitter

Twitter is an online social networking service that enables users to send and read short 140-character messages called “tweets”.

kawasemi uses [one](#) of the [REST APIs](#) for sending tweets.

Settings

You can obtain keys and access tokens from [Twitter Application Management](#).

```
config = {
    "CHANNELS": {
        "twitter": {
            "_backend": "kawasemi.backends.twitter.TwitterChannel",
            # Required
            # Consumer Key (API Key)
            "api_key": "ABCDEFGHIJKLM NOPQRSTUVWXYZ1234567890",
            # Consumer Secret (API Secret)
            "api_secret": "ABCDEFGHIJKLM NOPQRSTUVWXYZ1234567890",
            # Access Token
            "access_token": "0123456789-ABCDEFGHIJKLM NOPQRSTUVWXYZ",
            # Access Token Secret
            "access_token_secret": "ABCDEFGHIJKLM NOPQRSTUVWXYZ1234567890"
        }
    }
}
```

Options

You can specify all parameters available in the [API](#). For instance:

```
kawasemi.send("Sample tweet with location.", options={
    "twitter": {
        "lat": 37.7821120598956,
        "long": -122.400612831116
    }
})
```

2.4.5 Yo

Yo is the simplest and most efficient communication tool in the world.

kawasemi uses one of the [API](#) for sending Yos.

Settings

You can obtain an API token from Yo Dashboard.

```
config = {
    "CHANNELS": {
        "yo": {
            "_backend": "kawasemi.backends.yo.YoChannel",
            # Required
            # Your API token
            "api_token": environ.get("CHANNELS_YO_API_TOKEN"),
            # Optional
            # The recipient's username
            "username": environ.get("CHANNELS_YO_USERNAME"),
        }
    }
}
```

Text

You can send Yo with text (30 characters max) with Yo API v2.0.

```
# Yo with text
kawasemi.send("text")
```

Options

You can send Yo Location or Yo Link by specifying options. For example:

```
# Yo Link
kawasemi.send(None, options={
    "yo": {
        "link": "http://docs.justyo.co/v1.0/docs/yo"
    }
})

# Yo Location
kawasemi.send(None, options={
    "yo": {
        "location": "35.0261581,135.7818476"
    }
})
```

Please note that you can only send link or location, but not both.
