1	amCharts: Charts and Maps - Plugin	3
2	TablePress - Plugin	11
3	SUPPORT	15

WordPress plugins configured to display the Knowledge Base for the Sci-GaIA website

amCharts: Charts and Maps - Plugin

Download: <https://wordpress.org/plugins/amcharts-charts-and-maps/>

Last version <https://downloads.wordpress.org/plugin/amcharts-charts-and-maps.1.0.9.zip>

Installation:

Use WordPress Plugin page to search and install the amCharts plugin.

If you choose to install in manually, make sure all the files from the downloaded archive are placed into your /wp-content/plugins/amcharts/ directory.

After the installation, you'll just have to activate the amcharts-charts-and-maps plugin.

Usage

Create new charts using presets left from the Admin menu.

The screenshot shows the WordPress admin interface for the 'Charts & Maps' plugin. The left sidebar has a 'Charts & Maps' menu item with sub-options: 'Add New', '+ Serial', '+ Pie', '+ XY', '+ Funnel', '+ Radar', '+ Gauge', '+ Stock', and '+ Map'. The main content area is titled 'Charts & Maps' and includes an 'Add New' button. Below the title, there are filters for 'All (4)' and 'Published (4)', a search bar, and bulk action controls. The main content is a table with the following data:

<input type="checkbox"/>	Title	Date	Shortcode
<input type="checkbox"/>	My Gauge	11 mins ago Published	[amcharts id="gauge-cool"]
<input type="checkbox"/>	My Radar Chart	1 hour ago Published	[amcharts id="chart-1"]
<input type="checkbox"/>	My Awesome Pie Chart	2014/02/27 Published	[amcharts id="44"]
<input type="checkbox"/>	My Funnel Chart	2014/02/27 Published	[amcharts id="40"]
<input type="checkbox"/>	Title	Date	Shortcode

At the bottom of the table, there are bulk action controls and a '4 items' indicator.

Modify resources, HTML and JavaScript portion of the map. NOT apply defaults value.

TablePress - Plugin

Download: <https://wordpress.org/plugins/tablepress/>

Last version: <https://downloads.wordpress.org/plugin/tablepress.1.6.zip>

Installation:

The easiest way to install TablePress is via your WordPress Dashboard.

Go to the “Plugins” screen, click “Add New”, and search for “TablePress” in the WordPress Plugin Directory.

Then, click “Install Now” and the following steps will be done for you automatically.

After the installation, you’ll just have to activate the TablePress plugin.

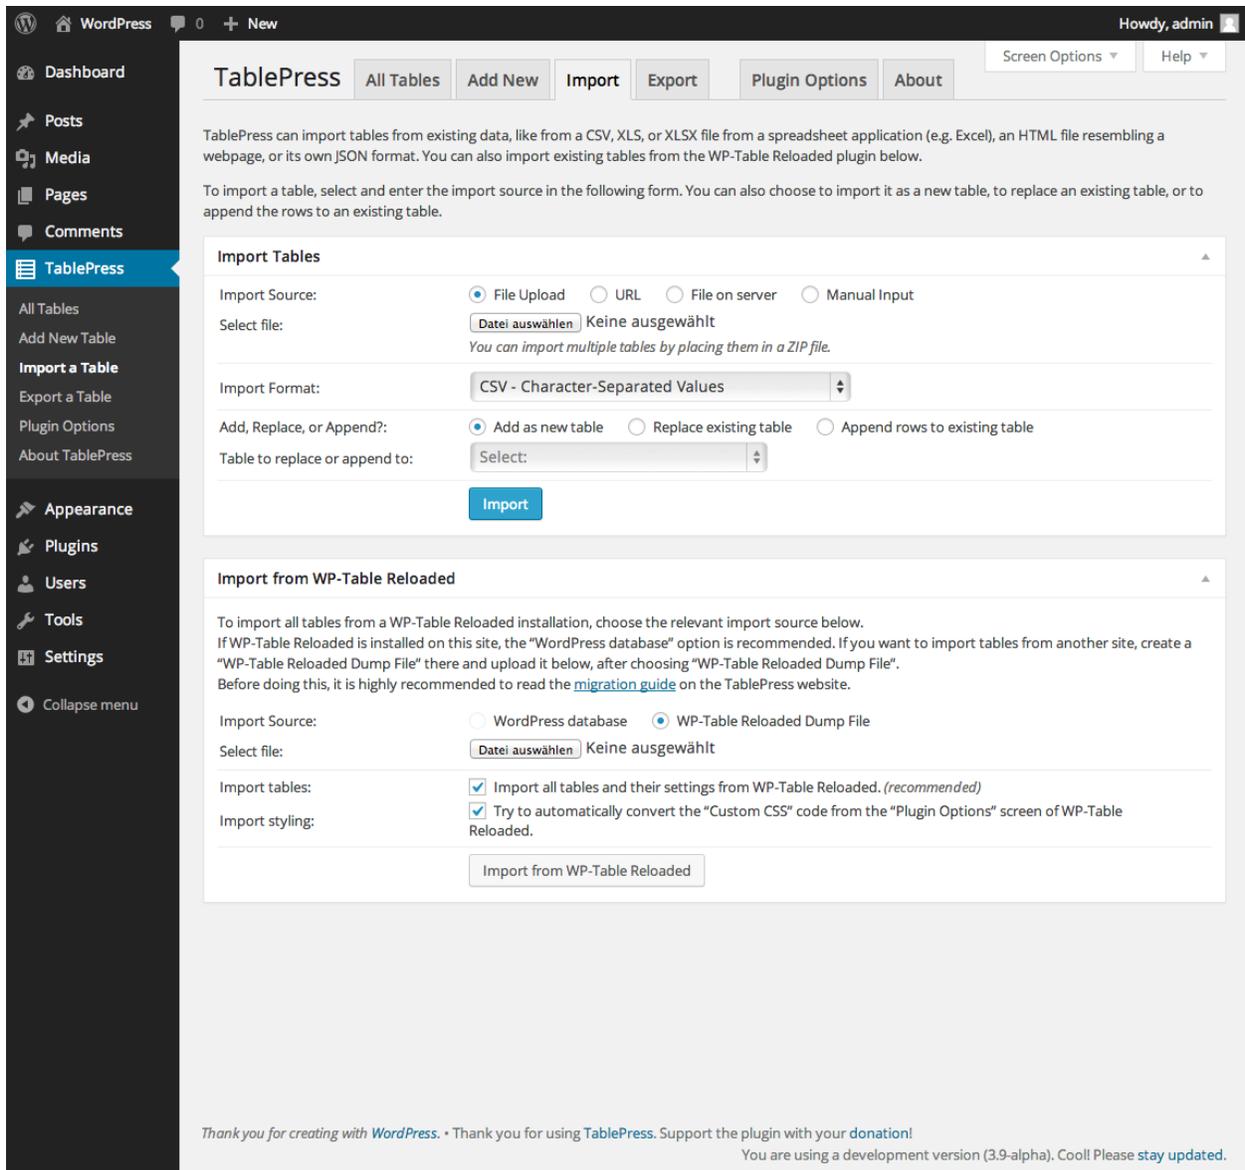

More info: <https://wordpress.org/plugins/tablepress/installation/>

Usage

Edit my.cnf and add

```
max_allowed_packet = 100M
```

Create a new table with import

WordPress 0 + New Howdy, admin

TablePress All Tables Add New Import Export Plugin Options About

Screen Options Help

TablePress can import tables from existing data, like from a CSV, XLS, or XLSX file from a spreadsheet application (e.g. Excel), an HTML file resembling a webpage, or its own JSON format. You can also import existing tables from the WP-Table Reloaded plugin below.

To import a table, select and enter the import source in the following form. You can also choose to import it as a new table, to replace an existing table, or to append the rows to an existing table.

Import Tables

Import Source: File Upload URL File on server Manual Input

Select file: Keine ausgewählt
You can import multiple tables by placing them in a ZIP file.

Import Format:

Add, Replace, or Append?: Add as new table Replace existing table Append rows to existing table

Table to replace or append to:

Import from WP-Table Reloaded

To import all tables from a WP-Table Reloaded installation, choose the relevant import source below. If WP-Table Reloaded is installed on this site, the "WordPress database" option is recommended. If you want to import tables from another site, create a "WP-Table Reloaded Dump File" there and upload it below, after choosing "WP-Table Reloaded Dump File". Before doing this, it is highly recommended to read the [migration guide](#) on the TablePress website.

Import Source: WordPress database WP-Table Reloaded Dump File

Select file: Keine ausgewählt

Import tables: Import all tables and their settings from WP-Table Reloaded. *(recommended)*

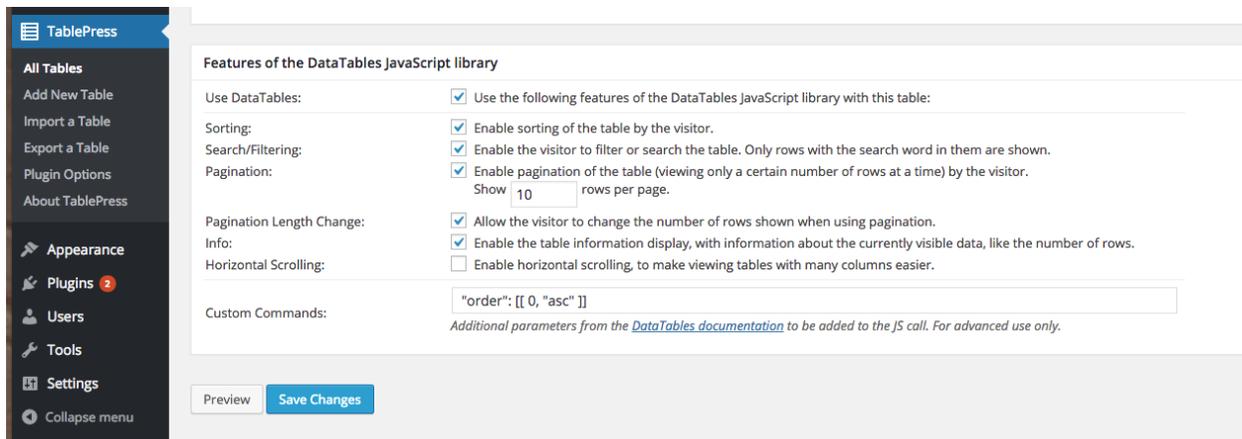

Import styling: Try to automatically convert the "Custom CSS" code from the "Plugin Options" screen of WP-Table Reloaded.

Thank you for creating with WordPress. • Thank you for using TablePress. Support the plugin with your [donation!](#)
You are using a development version (3.9-alpha). Cool! Please [stay updated](#).

Download file in "Download Section"

Then the import of the table add "Custom Commands":

```
"order": [[ 0, "asc" ]]
```

The screenshot shows the TablePress settings interface. On the left is a dark sidebar with navigation options: All Tables, Add New Table, Import a Table, Export a Table, Plugin Options, About TablePress, Appearance, Plugins (with a red notification icon), Users, Tools, Settings, and Collapse menu. The main content area is titled 'Features of the DataTables JavaScript library' and contains several settings:

- Use DataTables:** Use the following features of the DataTables JavaScript library with this table:
- Sorting:** Enable sorting of the table by the visitor.
- Search/Filtering:** Enable the visitor to filter or search the table. Only rows with the search word in them are shown.
- Pagination:** Enable pagination of the table (viewing only a certain number of rows at a time) by the visitor. Show rows per page.
- Pagination Length Change:** Allow the visitor to change the number of rows shown when using pagination.
- Info:** Enable the table information display, with information about the currently visible data, like the number of rows.
- Horizontal Scrolling:** Enable horizontal scrolling, to make viewing tables with many columns easier.
- Custom Commands:**
Additional parameters from the [DataTables documentation](#) to be added to the JS call. For advanced use only.

At the bottom of the settings area are two buttons: 'Preview' and 'Save Changes'.

Add table in a page

The Shortcode `[table id=N /]` is used to display a table in a post, on a page,

example `[table id=1 column_widths="20%|60%|20%"/]`
