libslack

1.1 Status

1.2 Tickets

1.3 Overview

libslack is a lightweight python wrapper around the [Slack-Web-Api](#). As part of libslack a small tool called scmd.py which provides a command line interface for the slack api.

1.4 Links

- Project on Github
- Documentation

1.5 Requirements

- Python 3.4 and newer

1.6 Dependencies

- docopt

1.7 Installation

1.7.1 From PyPi

```
pip install libslack
```

1.7.2 From Github

```
pip install git+https://github.com/Nicoretti/libslack.git
```

1.7.3 From Source

```
python3 setup.py install
```

Tools

2.1 Slack CMD (scmd)

The Slack CMD enables its user to use the slack web api via the command line.

2.1.1 Usage

Usage:

```
scmd (API_COMMAND | -h | -v) [<params>] [--auth-token=<token>]
```

Options:

-h	Show this screen.
-v	Show version.
--auth-token=<token>	The authentication token which will be used to access the slack api. As an alternative you can specify it in the .slackrc or set the \$SLACK_API_TOKEN environment variable.

2.1.2 Example

Call auth.test method

```
User@Host ~ $ scmd auth.test --auth-token xo xb-xxxxxxxxxx-xxxxxxxxxxxxxxxx  
{'user_id': 'UXXXXXXXXX', 'url': 'https://teamname.slack.com/', 'team': 'Teamname', 'user': 'username'}
```

Send a chat message using the web api

```
User@Host ~ $ scmd chat.postMessage "{'channel': 'CXXXXXXX', 'text': 'this is a message'}" send fd from  
{'ok': True, 'message': {'username': 'bot', 'subtype': 'bot_message', 'ts': '1445633421.000121', 'text': 'this is a message'}}
```

2.2 Slack Shell (sls)

The Slack Shell provides an interactive shell which enables the user to interactively interact with the slack web api (e.g. query all registered users).

2.2.1 Usage

```
Usage:
```

```
sls [--auth-token=<token>]  
sls -h | --help  
sls -v | --version
```

```
Options:
```

```
-h --help           Show this screen.  
-v --version        Show version.  
--auth-token=<token> The authentication token which will be used to access  
                      the slack api.  
                      As an alternative you can specify it in the .slackyrc  
                      or set the $SLACK_API_TOKEN environment variable.
```

2.2.2 Screenshot

```
Slack Shell (SLS)  
To get help type help  
  
((SLS)) >>> help  
  
Documented commands (type help <topic>):  
=====  
help  list  quit  
  
((SLS)) >>> list help  
((SLS)) >>> help list  
  
The list command can be used to query various information for the slack server.  
  
Usage:  
      list channels [-h]  
      list users [-h]  
  
Options:  
  
      -h prints help for the preceding command.  
  
((SLS)) >>> █
```

API-Reference

```
class libslack.slackapi.SlackApi (authentication_token, request=None)
```

A SlackApi object can be used to interact with the slack api.

For futher details see [methods](#).

```
call (api_call, parameters=None)
```

Executes a call on the remote slack api and returns an appropriate *SlackApiResponse* object.

Parameters

- **api_call** (*string*) – which identifies the web api endpoint which shall be called.
 - **parameters** (*dict*) – which will be supplied to the web api endpoint.
- e.g.: {‘channel’: ‘C1234567890’, ‘text’: ‘this message will be sent’}

Attention: The authentication-token allways will be passed to the endpoint implicitly.

Returns an ApiResponse object containing the data provided by the slackapi endpoint.

Raise Exception if an unknown api method is called.

```
class libslack.slackapi.SlackApiRequest (api_call, authentication_token)
```

The SlackApiRequest class handles and encapsulates a slack request.

```
execute (request_parameters=None)
```

Executes an ApiRequest, request an api call.

Parameters

- **request_parameters** (*dict*) – which will be supplied to the web api endpoint.
- e.g.: {‘channel’: ‘C1234567890’, ‘text’: ‘this message will be sent’}

Attention: The authentication-token allways will be passed to the endpoint implicitly.

- **authentication_token** – which grants access to the api.

Returns an SlackApiResponse object based on the response of the slackapi endpoint.

Raise Exception if an error occurs while executing the api call.

```
class libslack.slackapi.SlackApiResponse (response_data)
```

The SlackApiResponse class handles and encapsulates an response provided by the slackapi after an api method was called at the endpoint.

```
get_error_message ()
```

If is_error returns True, this method returns a more detail error message.

Returns a string which provides a more detail error message.

```
is_error ()
```

Indicates whether or not the response indicates that an error occured while trying to execute the associated api call.

Returns True if an error has occurred, otherwise False.
