# **mf Documentation**

***Release 0.1***

**Olivier Sallou**

January 31, 2015

<b>1</b>	<b>Indices and tables</b>	<b>3</b>
	<b>Python Module Index</b>	<b>5</b>

Contents:

**class** `mfpymid.dashboard.Dashboard`

Manage administration dashboard for pyramid

**static** `add_dashboard(klasses, config=None, prefix='')`

Adds a list of class to the dashboard

**Parameters**

- **klasses** (*list*) – list of object class to add to the dashboard
- **config** (*pyramid.config.Configurator*) – Pyramid Configurator
- **prefix** (*str*) – optional prefix to add in front of the routes

**static** `set_config(config)`

**Global config for dashboard.**

- **permission**: Pyramid permission for /admin views, no permission by default
- **templates**: path to Mako dashboard template, default is Dashboard.mako

**Parameters** `config` (*dict*) – configuration dictionary

**static** `set_connection(conn)`

Sets the db connection to mongo

**Parameters** `conn` (*Connection*) – MongoDB connection objects

`mfpymid.views.mf_delete(request)`

Delete an object If object has a function “my()”, then the function is called to get a filter on the request

**Parameters** `request` (*IMultiDict*) – HTTP params

**Returns** `json` - Status fo the operation

`mfpymid.views.mf_edit(request)`

Update an object in database

**Parameters** `request` (*IMultiDict*) – HTTP params

**Returns** `json` - Status of update and updated object

`mfpymid.views.mf_filter(objname, control, request=None)`

Return a mongo filter on object. It calls, if exists, the *my* method of the current object and returns the filter obtained from this method. :param objname: Name of the current object :type objname: str :param control: Type of operation :type control: MF\_READ or MF\_EDIT :param request: Current request :type request: pyramid.request :return: filter to use (dict)

`mfpymid.views.mf_list(request)`

Returns a JSON list of the object defined in the route If object has a function “my()”, then the function is called to get a filter on the request

**Parameters** `request` (*IMultiDict*) – HTTP params

**Returns** `json` - List of objects

`mfpymid.views.mf_search(request)`

Returns a JSON list of objects matching criteria on object

**Returns** `json` - List of objects

`mfp pyramid.views.mf_show(request)`

Returns a JSON object defined in the route If object has a function “my()”, then the function is called to get a filter on the request

**Parameters** `request` (*IMultiDict*) – HTTP params

**Returns** `json` - Object from database

`mfp pyramid.views.pluralize(name)`

Pluralize a name :param name: Name of the object :type name: str :return: str - lowercase object name with a final s

---

## Indices and tables

---

- *genindex*
- *modindex*
- *search*

## m

`mfp pyramid.dashboard`, [1](#)  
`mfp pyramid.views`, [1](#)

## A

`add_dashboard()` (mfp pyramid.dashboard.Dashboard static method), 1

## D

`Dashboard` (class in mfp pyramid.dashboard), 1

## M

`mf_delete()` (in module mfp pyramid.views), 1

`mf_edit()` (in module mfp pyramid.views), 1

`mf_filter()` (in module mfp pyramid.views), 1

`mf_list()` (in module mfp pyramid.views), 1

`mf_search()` (in module mfp pyramid.views), 1

`mf_show()` (in module mfp pyramid.views), 1

`mfp pyramid.dashboard` (module), 1

`mfp pyramid.views` (module), 1

## P

`pluralize()` (in module mfp pyramid.views), 2

## S

`set_config()` (mfp pyramid.dashboard.Dashboard static method), 1

`set_connection()` (mfp pyramid.dashboard.Dashboard static method), 1
